YEARLY SUMMARY

OF THE

WEEKLY RETURNS

OF

BIRTHS AND DEATHS

IN THE

DUBLIN REGISTRATION AREA

AND IN TWENTY-ONE OF THE PRINCIPAL URBAN DISTRICTS
IN IRELAND.

1909.

Births.—In the Dublin Registration Area, which consists of the city of Dublin and the urban districts of Rathmines and Rathgar, Pembroke, Blackrock and Kingstown, there were registered during the year 1909 (52 weeks) 11,407 births—5,839 boys and 5,568 girls—being equal to 1 in 35, or an annual rate of 28·6 per 1,000 of the estimated population.* The average rate for the preceding ten years was 28·5 per 1,000.

Of the 11,407 births registered in 1909, 9,760, or 32 in every 1,000 of the population, occurred in the city, and 1,647, or only 18 in every 1,000 inhabitants, in the urban districts named above.

Of the 11,407 births in the entire district, 2,878 were registered during the first quarter of the year, 3,004 in the second, 2,887 in the third, and 2,638 in the fourth, the weekly average being 219.

In London the number of births registered during the year 1909 (52 weeks) was 117,547, being equal to an annual rate of 24 in every 1,000 of the estimated population; in Glasgow the number was 23,091, equal to 26 per 1,000; and in Edinburgh it was 7,394, or 21 per 1,000 of the population.

Deaths.—The number of deaths registered in the Dublin Registration Area during the year 1909 was 8,750 (4,344 males and 4,406 females)—equal to 1 in 46, or 22·0 in every 1,000 of the estimated population. The average death rate for the ten years 1899—1908 was 24·7 per 1,000 of the estimated population of the Area as then constituted. Thus the rate for last year is 2·7 below the average—a decrease equivalent to 10·9 per cent.

Omitting 431 deaths, which, being those of persons admitted into public institutions from localities outside the Dublin Registration Area, are not

* See note (*), page xix.

properly chargeable to it, the death-rate for last year is 20·9 per 1,000 of the population, the rate for the city being 22·3 per 1,000 (21·7 on the North side, and 22·9 on the South), and for the suburbs 16·1 per 1,000. The rates for the several districts range from 14·1 for Clontarf and Howth No. 1, part of, to 24·7 for North City No. 2, (Lisburn-street)

Of the 8,750 deaths in the entire district, 2,682 were registered during the first quarter of the year, 2,185 in the second, 1,791 in the third, and 2,092 in the fourth, the average being 168.

In the twenty-one provincial Urban Districts, for which statistics are given in the Weekly Returns, the respective annual death-rates are as follow, ranging from the lowest to the highest:—Clonmel, 13·2 per 1,000 of the population;* Portadown, 14·7; Armagh, 14·9; Drogheda, 15·7; Dundalk, 16·3; Queenstown, 16·4; Sligo, 16·6; Limerick, 16·7; Newry, 16·8; Londonderry, 17·2; Wexford, 17·8; Belfast, 18·2; Ballymena, 18·3; Kilkenny, 18·6; Tralee, 19·0; Waterford, 19·1; Lurgan, 19·6; Galway, 20·0; Newtownards, 20·4; Cork, 22·1; and Lisburn, 23·4.

The number of deaths registered in London during the year 1909 (52 weeks) was 70,683, being equal to an annual rate of 14·6 in every 1,000 of the inhabitants; in Glasgow, 15,177, equal to 17·4 per 1,000; and in Edinburgh, 5,394, or 15·2 in every 1,000 of the estimated population.

Public Institutions.—Of the 8,750 deaths registered in the Dublin Registration Area last year, 3,679, or 42·0 per cent., occurred in public institutions, viz.:—2,061 in the various hospitals, prisons, and lunatic asylums; 704 in the North Dublin Union Workhouse; 892 in the South Dublin Union Workhouse; and 22 (those of persons admitted from the Dublin Registration Area) in the Rathdown Union Workhouse.

Diseases.—*Dublin Registration Area.*—(See Tables III. and IV.)—The records of last year show that the total number of deaths from the principal epidemic diseases† registered in the Dublin Registration Area was 649. This number is equal to a rate of 1·6 per 1,000 of the estimated population, the average rate for the preceding ten years being 2·2 per 1,000.

The following tabular statement shows the mortality from each of the principal epidemic diseases during the year 1909, and the average annual number of deaths for the 10 years 1899–1908:—

| PRINCIPAL EPIDEMIC DISEASES. | No. of Deaths in 1909. | Average Annual No. of Deaths, 1899–1908. |
|-----------------------------------|------------------------|--|
| Small-pox, . . . | — | 4 |
| Measles, . . . | 121 | 183 |
| Scarlet Fever, . . . | 25 | 34 |
| Typhus, . . . | 3 | 3 |
| Whooping-cough, . . . | 156 | 142 |
| Diphtheria, . . . | 60 | 52 |
| Pyrexia (origin uncertain), . . . | 4 | 5 |
| Enteric Fever, . . . | 68 | 92 |
| Diarrhoeal Diseases, . . . | 212 | 324 |

Small-pox.—The year 1909 passed without any indication of the existence of small-pox in the Dublin Registration Area.

* See note (*), page xix.

† Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, pyrexia (origin uncertain enteric fever, and diarrhoeal diseases.

Measles.—The deaths from measles, 121 in number, represent an annual rate of 0·31 per 1,000 of the population of the Dublin Registration Area, estimated to the middle of 1909, and are below the average (183) for the decennial period, 1899—1908. Of the total deaths, 48 appertained to the city districts of North Dublin Union, 57 to the city districts of South Dublin Union, 5 to the urban district of Rathmines and Rathgar, 5 to the urban district of Pembroke, and 2 to the urban district of Kingstown. It may be gathered from Table I. that 525 cases of measles were treated in Dublin hospitals during the year; of this number 472 were discharged, 36 died, and 17 cases were under treatment at the close of the year. In Table II. it may be seen that 119 cases of measles were notified in Pembroke urban district during the year 1909.

Scarlet Fever.—As in the case of measles there was a reduction in the number for 1909, as compared with the average number of deaths from scarlet fever for the ten years, 1899—1908, the average being 34, and the deaths in 1909 being 25. The deaths appertained as follows:—To North Dublin city 8 deaths, to South Dublin city 7 deaths, to Rathmines and Rathgar urban district 5 deaths, and to Pembroke urban district 3 deaths. Two deaths of persons admitted into institutions from without the Area also occurred.

It may be seen in Table I. that 654 cases of scarlet fever were admitted for treatment to Dublin Hospitals in the course of the year, making, with 48 cases, which were in hospital at the close of 1908, a total of 702 patients; 610 cases were discharged, 21 died in hospitals, and 71 cases—not including 21 at Beneavin—remained in hospital at the close of the year.

The notifications under the Infectious Diseases (Notification) Act, 1889 for the various sanitary districts of the Dublin Registration Area may be seen in Table II.

Typhus.—The registered mortality from typhus (3 deaths), was the same as the average for the preceding decade. During the year 22 patients suffering from this disease were treated in Dublin hospitals; of these 12 cases were discharged; there were 4 deaths in hospitals, and 6 patients remained under treatment at the close of the yearly period.

Whooping-Cough.—An increase upon the average is shown in the number of deaths from whooping-cough, the average being 142, and the number in the period under notice, 156; the latter figure represents an annual rate of 0·39 per 1,000 of the estimated population. In Table III., it may be seen that, in the decennial period, 1899—1908, the mortality from whooping-cough ranged from 48 deaths in 1905—the lowest—to 239 deaths in 1904, the number for that year being the highest registered in any one year of the decade. Of the 156 deaths, 68 appertained to the city districts of North Dublin Union, 69 to the city districts of South Dublin Union, 7 to the urban district of Rathmines and Rathgar, 6 to the urban district of Pembroke (in which district 255 cases were notified), one to the urban district of Blackrock, and 5 to the urban district of Kingstown.

Diphtheria.—The registration for the year 1909, shows an increase of 8 deaths from diphtheria, as compared with the average, the deaths in 1909 numbering 60, equal to an annual rate of 0·15 per 1,000, and the average numbering 52. In the year 1905, there were 32 deaths, the lowest number, and in the year 1902 there were 85 deaths from diphtheria, being the highest number registered in any one year of the preceding decade. Of the total deaths registered during the year, 15 belonged to the city districts of North

Dublin Union, 28 to the city districts of South Dublin Union, 3 to Rathmines and Rathgar, 6 to Pembroke, 2 to Kingstown, but not one death belonged to Blackrock urban district. In addition, there were 6 deaths of persons admitted to institutions from localities outside the Dublin Registration Area. In Table I. particulars are furnished regarding the number of cases of diphtheria under treatment in Dublin hospitals, and the notification from the several sanitary areas are given in Table II.

Enteric Fever.—A marked decline in the mortality from enteric fever is noticeable from an examination of Table III. In the first year of the decade (1899) there were 182 deaths recorded, from that year to 1907 (with one exception) there was a gradual decline, in the latter year 38 deaths being registered; in 1908 the figure was 58, again rising in the year under notice to 68; but this mortality is well below the yearly average for the decade, namely, 92. The annual rate represented by the 68 deaths registered in 1909 was 0·17 per 1,000 of the estimated population of the Area. Of the deaths registered, 31 belonged to the city districts of North Dublin Union, 20 to the city districts of South Dublin Union, 6 to Rathmines and Rathgar, 3 to Pembroke, and one to Kingstown. There was not one death from enteric fever recorded for the urban district of Blackrock. The deaths of persons admitted to institutions from without the Registration Area, and not included in the numbers for the above-named districts, amount to 7. It may be seen in Table I. that whereas there were 77 cases of enteric fever under treatment in hospitals at the close of the year 1908, the corresponding number at the close of the period under notice was 44. The cases of enteric fever notified to the sanitary authorities of the component parts of the Dublin Registration Area are set forth in Table II.

In 4 instances the cause of death was classified to the heading, pyrexia (origin uncertain).

Diarrhæal Diseases.—Of the total deaths (212) from diarrhæal diseases, 20 were registered in March quarter, 23 in June quarter, 132 in September quarter, and 37 in December quarter of 1909. The above total represents a death rate from diarrhæal diseases of 0·53 per 1,000 of the estimated population of the Area, and is less by 112 than the annual average in the preceding decade. Included in the total there were 191 deaths of children under 5 years of age. Table IV. shows that, of the deaths from diarrhæal diseases, 93 appertained to the city districts of North Dublin Union, 86 to the city districts of South Dublin Union, 13 to the urban district of Rathmines and Rathgar, 10 to Pembroke district, 2 to Blackrock, and 6 to Kingstown; there were also 2 deaths, of persons admitted to institutions from without the Registration Area.

Influenza.—The number of deaths from influenza was 102; in the year 1908, deaths from this malady were 176 in number, these numbers corresponding respectively to 0·26 per 1,000 and 0·44 per 1,000 of the estimated population of the Area.

Cerebro-spinal Fever.—In the year 1907 there were 46 deaths from cerebro-spinal fever, in 1908 the number declined to 30, and in the year under notice, a further decline to 13 deaths was recorded.

Pneumonia.—The aggregate number (746) of deaths under this heading includes 64 deaths from lobar pneumonia, 327 from broncho-pneumonia; one from epidemic pneumonia, and 354 from *pneumonia* (not defined). The total deaths from pneumonia are equal to an annual rate of 1·87 per 1,000 of the population, the average rate for the decennium ending with the year 1908, being 1·65 per 1,000.

Tuberculous Disease.—The following Table shows that, although the mortality from tuberculous disease is still abnormally high in Dublin, there is a welcome indication of decrease in the mortality from the disease.

TABLE showing the Number of DEATHS from All Forms of Tuberculous Disease and from Tuberculous Phthisis registered in the Dublin Registration Area during each of the 9 years, 1901-1909, with the respective rates per 1,000 of the population represented thereby; also the averages for the years, 1901-8. (See notes (*) and (†) on pages x.-xi.)

| Years. | Deaths from all Forms of Tuberculous Disease. | | Deaths from Tuberculous Phthisis (<i>Phthisis</i>). | |
|----------------|---|-----------------|---|-----------------|
| | Number. | Rate per 1,000. | Number. | Rate per 1,000. |
| 1901 | 1,876 | 4.99 | 1,274 | 3.39 |
| 1902 | 1,736 | 4.53 | 1,261 | 3.27 |
| 1903 | 1,778 | 4.69 | 1,218 | 3.21 |
| 1904 | 1,779 | 4.69 | 1,172 | 3.09 |
| 1905 | 1,724 | 4.55 | 1,207 | 3.13 |
| 1906 | 1,694 | 4.47 | 1,152 | 3.04 |
| 1907 | 1,793 | 4.59 | 1,183 | 3.03 |
| 1908 | 1,742 | 4.34 | 1,174 | 2.93 |
| Average 1901-8 | 1,765 | 4.61 | 1,205 | 3.14 |
| 1909 | 1,508 | 3.79 | 1,049 | 2.64 |

It appears from the above statement that the deaths from all forms of tuberculous disease registered in the Dublin Registration Area in the year 1909 numbered 1,508, as compared with 1,876 in the year 1901, the first year of the period covered by the above statement, with 1,742, the number registered in the year 1908, and with 1,765, the annual average for the preceding eight years. The rates corresponding to the above-mentioned totals are—for the year under notice 3.79 per 1,000 of the estimated population of the Area; for 1901 the rate is 4.99 per 1,000, for the year 1908 it is 4.34 per 1,000, and for the annual average of the eight years, 1901—1908, the rate is 4.61 per 1,000 of the mean estimated population.

It can also be ascertained that the decline in the mortality from tuberculous disease between any two consecutive years in the period, 1901-9, is greatest between the years 1908 and 1909; the number of deaths in 1909 being 234 (or 0.55 per 1,000 of the population) less than the number in 1908.

With reference to the figures presented for the yearly period now under notice, the total deaths from all forms of tuberculous disease, 1,508 in number, are 17 per cent. of the deaths from all causes which were registered, or in other words in every 6 deaths registered one was from tuberculous disease. Of the total deaths in 1909 from tuberculous disease, 1,049 were caused by tuberculous phthisis (*phthisis*), 158 by tuberculous meningitis, 30 by tuberculous peritonitis, 29 by *tabes mesenterica*, and 242 by general tuberculosis, tuberculosis, and by tuberculous disease of other organs or parts of the body.

The rates per 1,000 of the population representing the total deaths from all forms of tuberculous disease and the deaths from tuberculous phthisis (*phthisis*), for the Area (exclusive of deaths in institutions of persons admitted from without the Area) were 3.55 and 2.47 respectively; for the districts of North Dublin city 3.89 and 2.76 per 1,000; for the districts of South Dublin city, 4.06 and 2.74 per 1,000; for the urban district of Rathmines and Rathgar, 2.08 and 1.37 per 1,000; for the Pembroke urban district,

2.25 and 1.68 per 1,000; for the urban district of Blackrock, 1.60 and 1.14 per 1,000; and for the urban district of Kingstown, the respective rates were, 2.27 and 1.76 per 1,000, of the population.

Malignant Diseases.—Of the 418 deaths classified under this heading, 184 were caused by carcinoma, 22 by sarcoma, and 212 were returned as from cancer or malignant disease (undefined). The above total represents an annual death-rate of 1.05 per 1,000 of the estimated population of the Area.

Premature Birth.—In the course of the year the deaths of 200 infants were attributed to prematurity.

Diseases of the Brain and Nervous System.—Among the deaths, which numbered 541, there were 169 returned as being caused by *convulsions*; of the latter figure 166 were deaths of children under 5 years of age. The rate represented by the total (541) equals 1.36 per 1,000 of the population, estimated to the middle of the year 1909.

Diseases of the Heart and Blood Vessels.—Under this general heading there were 1,311 deaths, representing an annual death rate of 3.29 per 1,000 of the population.

Respiratory System.—The total deaths (1,179) inclusive of 1,038 from bronchitis, correspond to an annual rate of 2.96 per 1,000 of the population of the Area.

Violence.—The deaths from violence, in number 179, include 162 deaths from accident or negligence, 5 deaths by homicide, and 12 deaths by suicide. Included in the 162 deaths from accident or negligence, were 37 by burns, scalds, or explosions (of these 17 were of children under 5 years of age): 21 deaths by vehicles and horses: 21 deaths by drowning; 11 deaths of infants by suffocation in bed, and 6 deaths by poisons or poisonous vapours.

TABLE I.—THE NUMBER OF CASES OF THE UNDERMENTIONED DISEASES treated during the Year (52 weeks) ended Saturday, 1st January, 1910, in the principal Dublin Hospitals in which cases of infectious diseases are received.

| DISEASES. | No. of Cases in Hospital at close of previous year. | No. admitted during year. | Discharged. | Died. | No. under treatment on above date. |
|-----------------------|---|---------------------------|-------------|-------|------------------------------------|
| Small-pox, | 69 | 456 | 472 | 36 | 17 |
| Measles, | 48 | 654 | 610 | 21 | 71* |
| Scarlet Fever, | 22 | 22 | 12 | 4 | 6 |
| Typhus, | 33 | 476 | 426 | 45 | 38 |
| Diphtheria, | 77 | 423 | 413 | 43 | 44 |
| Enteric Fever, | 15 | 548 | 459 | 75 | 29 |
| Pneumonia, | | | | | |

* Exclusive of 21 patients in "Beneavin," the convalescent home of Cork-street Fever Hospital.

In 203 cases the cause of death was uncertified, there having been no medical attendant during the last illness; of these 203 cases, 112, or 55.2 per cent., were deaths of children under 5 years of age: these 112 deaths form 4.3 per cent. of the total number of deaths of children of that age-period. Of the deaths of 507 infants under one month old registered, there were 56 (or 11.0 per cent.) regarding which the cause was uncertified.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1908," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE II.—Showing the NUMBER OF CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast, during the Year (52 weeks) ended 1st January, 1910. A dash (—) denotes that the disease in question is not notifiable in the District.

† Formerly described as "Simple Continued Fever."

AGES.—Of the 8,750 deaths registered during the year, 2,620, or 30 per cent., were of children under five years of age, and 2,438, or 28 per cent., were of persons aged 60 years and upwards, including those of 1,311 persons aged 70 years and upwards, of whom 58 were stated to have been nonagenarians, and 3 (females) were stated to have been aged 100, 100 and 101 years, respectively.

The deaths of infants under 1 year old were equal to 143 for every 1,000 births registered, against 149 in the preceding year, and 159 in 1907.

TABLE V.—Showing, by certain Age-Periods, the Population of the Dublin Registration Area* in 1901 the Number of Deaths registered in each of the years 1899–1909, and the proportion which the Deaths at each age-period bear to the estimated Population at the same age.

OCCUPATIONS.—Table VII. on pages xvi.–xvii. exhibits the occupations or social position of the persons whose deaths were registered during the year, the various callings being grouped in classes and orders, so as to show the respective rates of mortality in the several social grades of the population. From this Table it will be observed that the deaths in families of the "Professional and Independent Class" were equal to a rate of 16·5 per 1,000 of the persons in that class according to the Census of 1901; in the "Middle Class" the death-rate was 16·5 per 1,000; among the "Artisan Class and Petty Shopkeepers" it was 16·8; and in the "General Service Class" it was 23·0. The number of the living in each of the several classes and orders of occupations in 1901 is shown by age-periods in the following Table.

* See note (*), pages x.–xi.

† See note (†), pages x.–xi.

TABLE VI.—Showing by AGES, in FIVE GENERAL CLASSES, the OCCUPATIONS or SOCIAL POSITION of the INHABITANTS of the Dublin Registration Area in 1901.

* Formerly described as "Simple Continued Fever."

PROVINCIAL URBAN DISTRICTS.—(See Tables VIII. and IX.)—The respective death-rates represented by the deaths from the principal epidemic diseases* registered during the year in the twenty-one urban districts included in the Weekly Returns are as follow, ranging in order from the lowest to the highest:—Portadown, 0·2 per 1,000 of the population; Clonmel, 0·3; Drogheda, 0·3; Queenstown, 0·4; Dundalk, 0·6; Londonderry, 0·9; Galway, 1·0; Sligo, 1·0; Kilkenny, 1·0; Newry, 1·0; Armagh, 1·2; Lurgan, 1·2; Newtownards, 1·2; Limerick, 1·2; Tralee, 1·2; Belfast, 1·3; Wexford, 1·3; Ballymena, 1·5; Lisburn, 1·6; Cork, 2·3; and Waterford, 2·4.

Small-pox.—There was no record of mortality from small-pox in the 21 town districts during the period covered by this report.

Measles.—Of 42 deaths from measles 12 appertained to Ballymena, 10 to Belfast, 5 to Lisburn, 5 to Kilkenny, 3 to Cork, 2 to each of Galway and Dundalk, and one to each of Londonderry, Wexford, and Sligo.

Scarlet Fever.—In Cork, 15 deaths from scarlet fever were registered; in Limerick, 5; in each of Belfast and Lurgan, 4; and in Londonderry, 3. There was one death from the disease registered in Kilkenny.

Typhus.—The deaths from typhus, 10 in number, comprised 4 in Cork, 3 in Waterford, 2 in Galway, and one death in Dundalk.

Whooping-Cough.—The epidemic of whooping-cough caused in Belfast 213 deaths; in Cork, 72 deaths; in Limerick, 19 deaths; in Waterford, 17 deaths; in each of Newry, Tralee, and Armagh, 6 deaths; in Newtownards, 3 deaths; in Londonderry, 2 deaths; and in each of Dundalk and Ballymena, one death.

Diphtheria.—The following deaths from diphtheria were recorded:—for Belfast, 18 deaths; for Cork, 11 deaths; for Lisburn, 5 deaths; for each of Limerick and Lurgan, 4 deaths; for each of Londonderry and Galway, 3 deaths; for each of Dundalk, Ballymena, and Armagh, 2 deaths; and for each of Newry, Sligo, Clonmel, and Newtownards, one death.

Enteric Fever.—The total, 57 deaths, included 20 in Belfast, 15 in Cork, 6 in Limerick, 4 in Drogheda, 3 in Tralee, 2 in Dundalk, also 2 in Newry, and one death in each of the following urban districts:—Londonderry, Galway, Lurgan, Lisburn, and Kilkenny.

Three deaths were classified to pyrexia (origin uncertain), 2 being in Belfast, and one in Cork.

Diarrhœal Diseases.—Of 447 deaths (the aggregate of the 21 urban districts), 244 were those of inhabitants of Belfast, 54 of Cork, 29 of Londonderry, 10 of Limerick, 43 of Waterford, and 14 of Wexford.

Cerebro-spinal Fever.—There were 20 deaths from cerebro-spinal fever or cerebro-spinal meningitis returned for Belfast during the year 1909. Of these 12 were registered in the March quarter, 5 in the June quarter, 2 in the September quarter, and one in the December quarter. During the year, 18 cases of the disease were returned as having been notified. (See Table II.).

Phthisis (Tuberculous Phthisis).—The number of deaths from phthisis registered in the twenty-one Town Districts amounted to 1,695, being less than the number registered in 1908 by 89 deaths. The total is equal to an annual rate of 2·3 per 1,000 of the aggregate population of the twenty-one Urban Districts. The deaths in Belfast, 811, represent a rate of 2·1 per 1,000 of the estimated population. In the twenty other Urban Districts the deaths, 884, represent an annual rate of 2·5 per 1,000 of the aggregate population of these Areas. The death-rate for phthisis in the Dublin Registration Area (exclusive of deaths in public institutions of persons admitted from outside the Area) is equal to 2·5 per 1,000 of the estimated population.

* See note (†) on page iv.

TABLE VIII.—BIRTHS and DEATHS Registered during the Year 1909 (52 weeks), in the Dublin Registration Area, and in each of the undermentioned Twenty-one Urban Districts (exclusive of Deaths in Public Institutions of persons admitted from other localities), with the number of Deaths from some of the principal causes; also the number of Uncertified Deaths.

[illegible]

• The population given for the Dublin Registration Area and its component parts, and the cities of Belfast and Londonderry, is that estimated to the middle of the year 1909; that for each of the other districts is the Population according to the Census of 1901.

Including 20 deaths from cerebro-spinal fever or *cerebro-spinal meningitis*. See text on page xviii.

‡ Including 11 deaths from cerebro-spinal fever.

TABLE IX.—Showing, by REGISTRARS' DISTRICTS the Number of BIRTHS and DEATHS in the CITIES or URBAN DISTRICTS of BELFAST and CORK registered during the Year (52 weeks) ended 1st January, 1910. Deaths in Public Institutions of persons admitted from without each City being mortal and all other Deaths in Institutions distributed according to the localities from which the deceased persons were admitted; with the ANNUAL RATE OF MORTALITY per 1,000 of the Population according to the Census of 1901 represented by the Deaths from All Causes and from the principal Epidemic Diseases; the Number of Deaths at certain AGE-PERIODS; the Number of Deaths from some of the Principal CAUSES; the Number of UNCERTIFIED DEATHS, &c.

WEEK ENDING SATURDAY, 9TH JANUARY, 1909.

[No. 1

General Register Office, Charlemont House,
Dublin, 11th January, 1909.

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 20·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks, and during the whole of that period, in the several Districts alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 327 | 47 | 280 | 280 | 233 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·2 per 1,000, the rates varying from 0·0 in seventeen of the districts to 5·7 in Newtownards. Among the 124 deaths from all causes registered in Belfast are one from whooping-cough, 2 from diphtheria, 2 from diarrhoeal diseases, and one from *cerebro-spinal meningitis*, and included in the 28 deaths from all causes registered in Cork are one from scarlet fever, 2 from diphtheria, and one from diarrhoea.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 201—101 boys and 100 girls—and the deaths to 190—100 males and 90 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 24·9 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, the rate was 23·6 per 1,000.

The total deaths (190) included 9 from measles, one from diphtheria, 5 from enteric

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
See note (a), Table II.

‡ See columns 10-18 of Table II.

fever, and 3 deaths from diarrhoeal diseases. In the 3 preceding weeks, deaths from measles were 5, 3, and 3; deaths from diphtheria were 2, one, and 2; deaths from enteric fever were 0, one, and 0; and deaths from diarrhoeal diseases were 4, 0, and 4, respectively.

The deaths (21) from pneumonia (all forms) included one death from lobar pneumonia, 11 deaths from broncho-pneumonia, and 9 deaths from pneumonia (not defined).

Tuberculous disease accounted for the deaths of 29 persons; this figure includes 21 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, one death from tuberculous peritonitis, and 4 deaths from other forms of the disease. In each of the 3 preceding weeks, deaths from tuberculous disease numbered 39, 25, and 40.

The deaths from malignant disease included one death from carcinoma and 7 deaths from cancer, malignant disease (undefined).

Prematurity was returned as the cause of death of 4 infants.

Of 13 deaths from diseases of the brain or nervous system, 3 were from *convulsions*, the latter being all under 5 years of age.

Thirty deaths were attributed to diseases of the heart and blood vessels, and 26 deaths were from bronchitis.

There was one death by suicidal poisoning by barium sulphide.

In 5 instances the cause of death was "uncertified," there having been no medical attendance during the last illness; these cases include the deaths of 3 infants under one year old, and the deaths of 2 persons aged 60 years and upwards.

Fifty-six of the persons whose deaths were registered during the week were under 5 years of age (27 being infants under one year, of whom 9 were under one month old), and 53 were aged 60 years and upwards, including 24 persons aged 70 and upwards, of whom 9 were octogenarians and 4 (2 males and 2 females) were stated to have been aged 90, 94, 90, and 98 years, respectively.

Eighty-three of the deaths registered during the week occurred in hospitals and other public institutions; of this number 15 took place in the North Dublin Union Workhouse, and 25 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire registration Area was 236 per 1,000; the rate in the City was 253 (North City Districts, 229; South, 279), and in the Suburbs, 177.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 21 per 1,000 inhabitants, the rate for the City being 22 (10 in the North City Districts, and 35 in the South), and for the Suburbs, 17 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (12) are equal to an annual rate of 212 per 1,000. Broncho-pneumonia and pneumonia (not defined) each caused one death, there were 2 deaths from phthisis, also 2 deaths from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (12) are equal to an annual rate of 158 per 1,000, and include one death from pneumonia (not defined), one death from tuberculous phthisis, and 3 deaths from diseases of the respiratory system.

No. 2 North City District (Lisburn-street).—The deaths (16) are equivalent to an annual rate of 274 per 1,000. Among the deaths there were 2 from broncho-pneumonia, 2 from pneumonia (not defined), one from tuberculous meningitis, and one death from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (17) represent an annual rate of 267 per 1,000. Measles caused 2 deaths, pneumonia (all forms) caused 6 deaths, there were 2 deaths from tuberculous phthisis (*phthisis*), and 3 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 294 per 1,000 inhabitants; Coolock and Drumecondra, part of, 227; and Finglas and Glasnevin, part of, 274. Among the 3 deaths from all causes for Clontarf and Howth, No. 1, part of, was one each from enteric fever and bronchitis; and the 5 deaths from all causes for Coolock and Drumecondra, part of, include 2 from phthisis.

No. 1 South City District (South Earl-street).—The deaths (28) represent an annual rate of 356 per 1,000. Measles caused 2 deaths, there was one death from broncho-pneumonia, there were 2 deaths from tuberculous disease, 9 deaths from bronchitis, and one suicidal death.

No. 2 South City District (Castle-street).—The deaths (7) are equal to an annual rate of 170 per 1,000. Measles and diarrhoea each caused one death, and there was one death from pneumonia (not defined), also one death from phthisis.

No. 3 South City District (Peter-street).—The deaths (19) are equal to an annual rate of 232 per 1,000. The deaths included 3 from measles, 7 from tuberculous disease, and 3 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (20) are equivalent to an annual rate of 294 per 1,000. There was one death from enteric fever, also one death from diarrhoea, one death from broncho-pneumonia; there were 4 deaths from tuberculous disease, and 3 deaths from bronchitis.

New Kilmulhann District.—The deaths (6) are equal to an annual rate of 348 per 1,000. One death was attributed to measles and one to broncho-pneumonia.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 214; Pembroke, 201; Blackrock, 60; and Kingstown, 118. The deaths from the principal epidemic diseases tabulated for these districts include 2 from enteric fever and one from *diarrhoea* for Pembroke. The 15 deaths from all causes for Rathmines and Rathgar include one from broncho-pneumonia, 2 from pneumonia (not defined), one from phthisis, and one from bronchitis; of the 11 deaths from all causes for Pembroke one was from broncho-pneumonia, one from phthisis, and 2 were from diseases of the respiratory system; and the only death recorded for Blackrock was one from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 9th January, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 9th January, 1909.

From this it appears that:—

Fourteen cases of measles were admitted into hospital during the week, 20 were discharged, there was one death, and 62 cases remained under treatment at its close.

Twelve cases of scarlet fever were admitted to hospital, 4 were discharged, and 56* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Seven cases of diphtheria were admitted to hospital, 8 were discharged, there was one death, and 31 patients remained under treatment at the close of the week.

Eight cases of enteric fever were admitted to hospital during the week, 13 were discharged, there were 3 deaths, and 69 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 4 cases of pneumonia were admitted to hospital, 6 were discharged, there was one death, and 12 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 18.0) was equal to an average annual death-rate of 17.5 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 19.5 per 1,000, the rate for Glasgow being 19.5 and for Edinburgh 20.3.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 9th January. From this Report it appears that of a total of 56 cases notified, 23 were scarlet fever, 13 phthisis, 9 diphtheria, 7 erysipelas, 3 cerebro-spinal fever and one enteric fever. Among the 320 cases of infectious diseases in hospital at the close of the week were 209 cases of scarlet fever, 38 of phthisis, 27 of diphtheria, 10 of erysipelas, 7 of whooping-cough, 6 of enteric fever, 4 of chicken-pox, one of measles, and one of puerperal fever.

* See note (*) at foot of Table XII.

METEOROLOGY. (e)

REGISTRATION—WEEK ENDING SATURDAY, 9TH JANUARY, 1909.

(n) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909.

(o) 10 deaths of persons admitted to hospital from localities outside the Area.

(p) Some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Annagh for Lisburn, Lurgan, Newry, and Portadown, those at Markree for Sligo, and those at Roehe's Point for Cork and Wexford.

(q) Observations of Ordnance Surveyance, Phoenix Park.

(r) Observations by Sir John Moore taken at Rathfriland.

(s) Observations.

(t) Exclusive of Pneumonia.

(u) Exclusive of the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909.

(v) Formerly described as "Simple Continued Fever."

(w) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Annagh for Lisburn, Lurgan, Newry, and Portadown, those at Markree for Sligo, and those at Roehe's Point for Cork and Wexford.

(x) Observations by Sir John Moore taken at Rathfriland.

(y) Observations.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin, and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 9th January, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 9th January, 1909:—

"Until Wednesday an anticyclone, in the central area of which the barometer stood at 30·8 inches, held its position over France and Germany, its north-western quadrant stretching across the British Isles. At the same time the barometer was low, and at times very low, in the direction of Iceland. Hence a prevalence of warm S.W. winds, and open but cloudy and damp weather in the British Isles. In Dublin Sunday was very mild and damp, through fair and sunny between 11 a.m. and 3 p.m. Monday and Tuesday were extremely dull, the sky being densely clouded both day and night. On Tuesday, at 8 15 p.m., the moon—almost at the full—appeared for a few minutes in a rift of the clouds then travelling from N.W. Rain fell during the following night in connection with a shallow V-shaped depression which formed within the limits of the anticyclone and moved eastward across St. George's Channel and the south of England. In the rear of this system a new anticyclone advanced from the Atlantic to the Bay of Biscay, the highest reading of the barometer at 7 a.m. of Thursday being 30·61 inches at Brest. In the course of this day a large depression passed southeastwards across Norway from the Arctic Ocean. Great Britain came within its sphere of influence as it travelled, strong N.W. to N. winds carrying squalls of hail, sleet, and snow from Scotland to the south of England. In several places thunder and lightning accompanied the squalls. In Ireland the weather, though unsettled, was less cold, and rain took the place of sleet and snow. Friday night was cold, but before dawn on Saturday increasing cloud and a backing wind heralded the approach to the Irish Coasts of an Atlantic depression. In Dublin the barometer remained above 30 inches throughout the week, the mean reading being 30·378 inches and the extremes, highest—30·654 inches, at 9 a.m. of Monday (wind, S.W.); lowest—30·055 inches, at 9 p.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 45° F.; the mean dry bulb reading being 44°. The screened thermometers ranged from 52° F. on Sunday to 34° F. on Saturday. The dominant winds were S.W. and N.W. Rain fell on 5 days to the amount of '330 inch, '156 inch being measured on Thursday. Solar and lunar halos appeared on Thursday, a solar halo on Saturday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.237 inches. The highest reading (30.513) was on Monday at 9 a.m., air calm, and the lowest (29.915) on Thursday at 9 p.m., wind S.W.

The mean temperature for the week was 43.4°, being 2.4° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 53.1°, and was lowest on Saturday, the mercury having fallen to 30.8°. The mean of the Dry Bulb for the week was 43.0° and of the Wet Bulb 41.1°. The mean humidity of the air was .86, complete saturation being represented by 1.0. The rainfall during the week measured 0.321 inch.

At Greenwich the mean temperature for the week was 40.7°, the maximum 47.4°, and the minimum 32.5°; at Glasgow the maximum was 50.6°, the minimum 33.0°, and the mean 42.7°; and at Edinburgh the maximum was 49.8°, the minimum 31.7°, and the mean 42.0°. The rainfall at Greenwich measured 0.13 in.; at Glasgow 0.74 in.; and at Edinburgh 0.65 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 16TH JANUARY, 1909.

[No. 2.]

*General Register Office, Charlemont House,
Dublin, 18th January, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 21·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to, deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality:

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Galway, . . . | | 15·5 | 7·8 | 23·3 | 11·7 | Tralee, . . . | 10·6 | 26·4 | 26·4 | 31·7 | 23·8 |
| Kilkenny, . . . | 9·8 | 19·7 | 44·2 | 49·1 | 30·7 | Waterford, . . . | 17·5 | 27·3 | 13·6 | 9·7 | 17·0 |
| | | | | | | Wexford, . . . | 4·7 | 28·0 | 28·0 | 23·3 | 21·0 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·4 per 1,000, the rates varying from 0·0 in twelve of the districts to 5·7 in Newtownards. Among the 143 deaths from all causes registered in Belfast are 3 from measles and one from whooping-cough. Of the 30 deaths from all causes registered in Cork are one from scarlet fever and 3 from whooping-cough. One death from scarlet fever and one death from diarrhoea are included in the 12 deaths from all causes registered in Limerick. Among the 5 deaths from all causes registered in Newry is one from whooping-cough, and of the 10 deaths from all causes registered in Kilkenny one is from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 236—133 boys and 103 girls—and the deaths to 191—95 males and 96 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 25·0 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, the rate was 23·7 per 1,000. During the two weeks ending

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

with Saturday last, the death-rate averaged 25.0 and was 4.2 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the deaths there were 8 from measles, 2 from whooping-cough, one from diphtheria, 3 from enteric fever, and one death from dysentery. The deaths from measles in the 3 preceding weeks were 3, 3, and 9; deaths from whooping-cough were 2, 3, and 0; deaths from diphtheria were one, 2, and one; deaths from enteric fever were one, 0, and 5; and deaths from diarrhoeal diseases were 0, 4, and 3, respectively.

There were 2 deaths from lobar pneumonia, 8 from broncho-pneumonia, and 9 deaths from pneumonia (not defined).

Deaths from all forms of tuberculous disease, which were 25, 40, and 29 in each of the 3 preceding weeks, were 25 in the period under notice. The latter figure includes 17 deaths from tuberculous phthisis (*phthisis*), 3 from tuberculous meningitis, one from tuberculous peritonitis, 2 from *tubercles mesenterica*, and 2 deaths from other forms of the disease.

Of 13 deaths from malignant disease, 6 were from carcinoma, 3 were from sarcoma, and 4 were returned from cancer, malignant disease (undefined).

The deaths of 5 prematurely born infants were registered:

The 12 deaths assigned to diseases of the brain and nervous system include those of 4 infants under one year of age from *convulsions*.

Twenty-nine deaths were attributed to diseases of the heart and blood vessels, and the deaths from bronchitis amounted to 28.

There was one death caused by burns, received accidentally.

In 6 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 3 infants under one year of age, and the deaths of 2 persons aged 60 years and upwards.

Fifty-eight of the persons whose deaths were registered during the week were under 5 years of age (30 being infants under one year, of whom 12 were under one month old), and 52 were aged 60 years and upwards, including 32 persons aged 70 and upwards, of whom 11 were octogenarians and 2 (females) were stated to have been aged 91 and 92 years, respectively.

Sixty-four of the deaths registered during the week occurred in hospitals and other public institutions; of this number 13 took place in the North Dublin Union Workhouse and 11 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 23.7 per 1,000; the rate in the City was 25.0 (North City Districts, 27.9; South, 21.9), and in the Suburbs, 19.4.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2.0 per 1,000 inhabitants, the rate for the City being 2.6 (2.3 in the North City Districts, and 2.8 in the South), and for the Suburbs, 0.0.

No. 1 North City District, East (Clarence-street, North).—The deaths (15) are equal to an annual rate of 26.4 per 1,000. The total includes one death from whooping-cough, one death from broncho-pneumonia, 3 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (23) are equal to an annual rate of 30.3 per 1,000. Enteric fever caused one death, there were 4 deaths from pneumonia (all forms), 2 deaths from *phthisis*, and 5 from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (18) are equivalent to an annual rate of 30.9 per 1,000. Measles caused 3 deaths, there were 2 deaths from pneumonia (not defined), 5 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (18) represent an annual rate of 28.3 per 1,000. Among the deaths was one from dysentery, there were 3 from broncho-pneumonia, 3 from tuberculous disease, and 3 from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 29.4 per 1,000 inhabitants; Coolock and Drumcondra, part of, 18.1; and Finglas and Glasvin, part of, 20.6. Among the 3 deaths from all causes for Clontarf and Howth, No. 1, part of, was one from enteric fever.

No. 1 South City District (South Earl-street).—The deaths (16) represent an annual rate of 20.3 per 1,000. Measles and whooping-cough each caused one death, there was one death from broncho-pneumonia, 2 deaths were due to pneumonia (not defined), 2 to tuberculous phthisis, and 5 to bronchitis.

No. 2 South City District (Castle-street).—The deaths (12) are equal to an annual rate of 29.1 per 1,000. Of the deaths one was from measles, 6 were from tuberculous disease, and 2 were caused by diseases of the respiratory system.

No. 3 South City District (Peter-street).—The deaths (24) are equal to an annual rate of 29.3 per 1,000. The deaths include 3 from measles, one from enteric fever, 2 from pneumonia (not defined), 2 from tuberculous phthisis (*phthisis*), and 2 from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (9) are equivalent to an annual rate of 13.2 per 1,000. Of the 9 deaths, one was from pneumonia (not defined), one was from bronchitis, and there was one from burns, accidentally received.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11.6 per 1,000. Diphtheria was the cause of one of the deaths registered.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 22.8; Pembroke, 18.3; Blackrock, 17.9; and Kingstown, 14.8. There were no deaths from any of the principal epidemic diseases tabulated for these districts. Among the 16 deaths from all causes for Rathmines and Rathgar are one from broncho-pneumonia and 3 from bronchitis. Of the 10 deaths from all causes for Pembroke are one death each from lobar pneumonia, pneumonia (not defined), and *phthisis*, and 2 from diseases of the respiratory system. Included in the 5 deaths from all causes for Kingstown are one from tuberculous phthisis and one from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 16th January, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 16th January, 1909.

From this it appears that:—

Nineteen cases of measles were admitted into hospital during the week, 19 were discharged, there was one death, and 61 cases remained under treatment at its close.

Six cases of scarlet fever were admitted to hospital, 10 were discharged, and 52* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Ten cases of diphtheria were admitted to hospital, 8 were discharged, and 33 patients remained under treatment at the close of the week.

Eighteen cases of enteric fever were admitted to hospital during the week, 5 were discharged, there was one death, and 81 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 7 cases of pneumonia were admitted to hospital, 5 were discharged, and 14 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 16.9) was equal to an average annual death-rate of 16.6 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 18.1 per 1,000, the rate for Glasgow being 17.7 and for Edinburgh 16.0.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 16th January. From this Report it appears that of a total of 48 cases notified, 20 were scarlet fever, 17 phthisis, 5 diphtheria, 3 erysipelas, 2 cerebro-spinal fever and one enteric fever. Among the 317 cases of infectious diseases in hospital at the close of the week were 197 cases of scarlet fever, 37 of phthisis, 28 of diphtheria, 14 of whooping-cough, 6 of enteric fever, 6 of chicken-pox, 5 of erysipelas, 2 of measles, one of cerebro-spinal fever, and one of puerperal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS** and **DEATHS** registered during the Week ending Saturday, 16th January, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 16th January, 1909:—

"Very unsettled, rough, and at times tempestuous weather was experienced in the course of this week. A succession of large and deep atmospheric depressions travelled in from the Atlantic, their centres crossing North-western Europe along tracks lying more and more to the southward as the week advanced. The anticyclone, which had rested through so many weeks over Central Europe, completely disappeared after Monday, the area of high barometer being transferred to the Iberian Peninsula and the adjoining Ocean. On Sunday morning the barometer ranged from 28.89 inches at Bodø, in Norway, to 30.39 inches at Corunna, in Spain. A warm westerly wind blew over the British Isles, and rain fell generally. On Monday morning the range of pressure was from 28.60 inches at Bodø to 30.35 inches at Lisbon. Temperature fell in Ireland, but rose in England and on the Continent. On Tuesday morning Bodø reported 28.51 inches, Lisbon 30.17 inches. A secondary depression at this time formed off the Land's End, passing up the English Channel on Wednesday. The weather became finer and colder in Ireland for a time, but a gale and hail squalls passed over this country in the afternoon of this day. During Thursday and Friday a further reduction of pressure took place over the entire N.W. of Europe, and at 7 a.m. of the latter day the barometer was as low as 28.31 inches in the S.E. of Iceland, 28.45 inches in the Faeroe, 28.48 inches at Sumburgh Head in the Shetlands, and 28.47 inches at Skudesnes on the S.W. coast of Norway. Severe cold prevailed in Iceland, thence spreading across the Ocean to the British Isles, over which snow or sleet and hail fell in frequent showers during the last three days of the week, while a complete thaw occurred in France, Germany, and Austria. In Dublin the mean atmospheric pressure was 29.467 inches, or 911 inch below that of the previous week. The barometer ranged from 29.934 inches at 9 a.m. of Sunday (wind, W.S.W.) to 28.864 inches at 7 p.m. of Thursday (wind, S.W.). The corrected M.T. was 42.2°, the M. Dry Bulb reading at 9 a.m. and 9 p.m. being 40.5°. The screened thermometers rose to 51.1° on Sunday and fell to 31.7° on Saturday. Westerly winds prevailed. The rainfall was .572 inch on six days, .223 inch being recorded on Sunday. On Friday night a thunderstorm passed over the southern parts of Ireland and England."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.324 inches. The highest reading (29.793) was on Sunday at 9 a.m., wind W., and the lowest (28.739) on Thursday at 9 p.m., wind W.S.W.

The mean temperature for the week was 41.1°, being 0.9° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday and Monday, on which days the thermometer registered 50.3°, and was lowest on Saturday, the mercury having fallen to 30.3°. The mean of the Dry Bulb for the week was 39.5° and of the Wet Bulb 38.0°. The mean humidity of the air was .88, complete saturation being represented by 1.0. The rainfall during the week measured 0.688 inch.

At Greenwich the mean temperature for the week was 42.2°, the maximum 50.4°, and the minimum 34.1°; at Glasgow the maximum was 49.0°, the minimum 30.0°, and the mean 38.5°; and at Edinburgh the maximum was 47.0°, the minimum 28.7°, and the mean 37.2°. The rainfall at Greenwich measured 0.49 in.; at Glasgow 1.92 ins.; and at Edinburgh 1.38 ins.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 23RD JANUARY, 1909.

[No. 3.]

*General Register Office, Charlemont House,
Dublin, 25th January, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 21·6 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 28·0 | 28·0 | 23·3 | 14·0 | 23·3 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in seventeen of the districts to 4·9 in Kilkenny, the 6 deaths from all causes registered in that district including one from measles. Among the 140 deaths from all causes registered in Belfast are 2 from measles, one from whooping-cough, one from enteric fever, one from diarrhoea, one from cerebro-spinal fever, and one from *cerebro-spinal meningitis*; and included in the 43 deaths from all causes registered for Cork are 2 from scarlet fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 205—115 boys and 90 girls—and the deaths to 200—98 males and 102 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 26·2 in every 1,000 of the population; omitting the deaths (numbering 7) of persons admitted into public institutions from localities outside the Area, the rate was 25·3 per 1,000. During the three weeks ending

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

with Saturday last, the death-rate averaged 25·4 and was 3·4 below the mean rate for the corresponding portions of the ten years 1899-1908.

The 200 deaths registered include 9 from measles, 2 from whooping-cough, one from diphtheria, and one from *diarrhœa*. In the 3 preceding weeks, deaths from measles were 3, 9, and 8; deaths from whooping-cough were 3, 0, and 2; deaths from diphtheria were 2, one, and one; and deaths from diarrhoeal diseases were 4, 3, and one, respectively. There were 2 deaths from influenza.

Ten deaths were attributed to broncho-pneumonia and 9 to *pneumonia* (not defined).

There were 27 deaths from all forms of tuberculous disease, including 18 deaths from tuberculous phthisis (*phthisis*), 3 from tuberculous meningitis, one death each from tuberculous peritonitis and *tabes mesenterica*, and 4 from other forms of tuberculous disease. In the 3 preceding weeks, deaths from all forms of tuberculous disease numbered 40, 29 and 25, respectively.

Sarcoma caused one death, and cancer, malignant disease (undefined) caused 4 deaths.

The deaths of 2 infants prematurely born were recorded.

Of 13 deaths from diseases of the brain and nervous system, 5 (all being those of infants under one year of age) were ascribed to *convulsions*.

There were 34 deaths from diseases of the heart and blood vessels, and 31 deaths from bronchitis.

Of 5 deaths attributed to accidental causes 2 (one being that of a child 4 years of age) were from burns.

In 6 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 4 infants under one year of age, and the death of one person aged 60 years.

Seventy-two of the persons whose deaths were registered during the week were under 5 years of age (43 being infants under one year, of whom 10 were under one month old), and 58 were aged 60 years and upwards, including 30 persons aged 70 and upwards, of whom 5 were octogenarians and 2 (women) were stated to have been aged 92 years, respectively.

Seventy-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 15 took place in the North Dublin Union Workhouse and 24 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 25·3 per 1,000; the rate in the City was 27·7 (North City Districts, 25·2; South, 30·3), and in the Suburbs, 17·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·7 per 1,000 inhabitants, the rate for the City being 2·2 (2·0 in the North City Districts, and 2·4 in the South), and for the Suburbs, 0·0.

No. 1 North City District, East (Clarence-street, North).—The deaths (16) are equal to an annual rate of 28·2 per 1,000, and include one death from *diarrhœa*, 2 deaths from influenza, 2 from tuberculous phthisis (*phthisis*), and 6 from diseases of the respiratory system.

No. 1 North City District, West (Summer-hill).—The deaths (16) are equal to an annual rate of 21·1 per 1,000. Among them are one from measles, one from broncho-pneumonia, 2 from *pneumonia* (not defined), 2 from tuberculous phthisis (*phthisis*), and one from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (20) are equivalent to an annual rate of 34·3 per 1,000. There were 3 deaths from measles, one from *pneumonia* (not defined), 3 from tuberculous disease, one from bronchitis, and one attributed to exposure.

No. 3 North City District (Benburb-street).—The deaths (15) represent an annual rate of 23·6 per 1,000. One death each from broncho-pneumonia and *pneumonia* (not defined), 2 deaths from tuberculous disease, one death from bronchitis, and one death from accidental burns were recorded.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants: Coolock and Drumcondra, part of, 22·7; and Finglas and Glasnevin, part of, 13·7. Of the 2 deaths for Clontarf and Howth, No. 1, part of, one was from measles and one from broncho-pneumonia; of the 5 deaths from all causes for Coolock and Drumcondra, part of, include 2 deaths from tuberculous phthisis and one from bronchitis; and of the 2 deaths from all causes for Finglas and Glasnevin, part of, one was caused by tuberculous disease.

No. 1 South City District (South Earl-street).—The deaths (34) represent an annual rate of 43·2 per 1,000, and include one death each from measles, whooping-cough, and diphtheria, 2 deaths each from broncho-pneumonia and *pneumonia* (not defined), 4 from tuberculous disease, 9 from diseases of the respiratory system, and one death from accidental burns.

No. 2 South City District (Castle-street).—The deaths (12) are equal to an annual rate of 29·1 per 1,000. *Pneumonia* (not defined) caused one death, tuberculous disease 2 deaths, and bronchitis 5 deaths.

No. 3 South City District (Peter-street).—The deaths (21) are equal to an annual rate of 25·6 per 1,000. There were 2 deaths from measles, one death each from broncho-pneumonia and *pneumonia* (not defined), 2 deaths from tuberculous phthisis (*phthisis*), and 3 from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (17) are equivalent to an annual rate of 25·0 per 1,000. Among them are one death from whooping-cough, one from broncho-pneumonia, 3 from tuberculous disease, 4 from bronchitis, and one death attributed to an accident.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. Of the 3 deaths one was from measles, one from tuberculous phthisis, and one from bronchitis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 27·1; Pembroke, 9·1; Blackrock, 11·9; and Kingstown, 11·8. There was no death from any of the principal epidemic diseases tabulated for these districts. Among the 19 deaths from all causes for Rathmines and Rathgar are 2 from broncho-pneumonia, one each from *pneumonia* (not defined) and *phthisis*, and 2 from diseases of the respiratory system; of the 5 deaths from all causes for Pembroke one was caused accidentally; and the 2 deaths from all causes for Blackrock include one from broncho-pneumonia.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 23rd January, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 23rd January, 1909.

From this it appears that:—

Seventeen cases of measles were admitted into hospital during the week, 26 were discharged, there were 4 deaths, and 48 cases remained under treatment at its close.

Ten cases of scarlet fever were admitted to hospital, 10 were discharged, and 52* cases remained under treatment at the close of the week.

One case of typhus remained under treatment at the close of the week.

Two cases of diphtheria were admitted to hospital, 8 were discharged, there was one death, and 26 patients remained under treatment at the close of the week.

Twelve cases of enteric fever were admitted to hospital during the week, 14 were discharged, there was one death, and 78 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 8 cases of pneumonia were admitted to hospital, 7 were discharged, and 15 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 15·3) was equal to an average annual death-rate of 15·7 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 18·8 per 1,000, the rate for Glasgow being 18·5 and for Edinburgh 19·4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 23rd January. From this Report it appears that of a total of 44 cases notified, 27 were scarlet fever, 7 diphtheria, 6 phthisis, 2 erysipelas, one cerebro-spinal fever and one enteric fever. Among the 317 cases of infectious diseases in hospital at the close of the week were 192 cases of scarlet fever, 43 of phthisis, 29 of diphtheria, 16 of whooping-cough, 6 of chicken-pox, 5 of enteric fever, 4 of erysipelas, 2 of measles, and 2 of cerebro-spinal fever.

* See note (2) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 23rd January, 1900, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 23rd January, 1909:—

"During the first two days of this week a baric gradient of unusual steepness existed over Northwestern Europe. On Sunday morning the barometer was as low as 28.12 inches at Reykjavik in Iceland, and from that station pressure increased to 30.52 inches at Lyons—a difference of 2.4 inches. At 7 a.m. of Monday the range of atmospheric pressure was from 28.19 inches at Reykjavik to 30.55 inches at Munich. This steep baric gradient caused strong S.W. winds in the British Isles, fresh gales being felt at exposed stations—in Dublin gale force prevailed from noon of Sunday to the same time on Monday. High temperatures accompanied the strong S.W. winds—in Dublin 52.6° was the maximum on Sunday, and 53.2° on Monday. The wind moderated at noon of the latter day, and a considerable rainfall in the afternoon ushered in a brisk and decided fall of temperature in Ireland. The thermometer fell from 53.2° to 40.0° by 9 p.m. in Dublin. The rain and cold were connected with the passage eastwards across Ireland and England of a shallow V-shaped depression, which reached the S.E. of England on Tuesday morning, and the mouth of the Elbe on the evening of that day. This disturbance was followed by an anticyclone from the Atlantic, which during the remainder of the week caused calm, foggy, cold weather, with much cloud on Friday. Rain fell in Dublin on the evening of this day, and a fog of exceptional density prevailed on Saturday morning, the air temperature at 9 a.m. being 33.0°, and the wet bulb 32.9°. A calm, cold day followed, the thermometer rising no higher than 38.2°. The mean height of the barometer in this City was 30.139 inches, the range being from 29.141 inches at 9 a.m. of Monday (wind, S.W.) to 30.535 inches at 9 p.m. of Wednesday (wind calm). The corrected mean temperature was 41.2°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 40.5°. The screened thermometers rose to 53.2° on Monday and fell to 32.8° on Saturday. S.W. and W. winds prevailed. Rain fell on 2 days to the amount of .263 inch, .220 inch being measured on Monday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.983 inches. The highest reading (30.383) was on Wednesday at 9 p.m., air calm, and the lowest (29.278) on Monday at 9 a.m., wind S.W.

The mean temperature for the week was 38.8°, being 3.0° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 52.1°, and was lowest on Saturday, the mercury having fallen to 27.9°. The mean of the Dry Bulb for the week was 38.4° and of the Wet Bulb 37.4°. The mean humidity of the air was .92, complete saturation being represented by 1.0. The rainfall during the week measured 0.375 inch.

At Greenwich the mean temperature for the week was 38.7°, the maximum 49.7°, and the minimum 29.0°; at Glasgow the maximum was 51.0°, the minimum 32.0°, and the mean 41.2°; and at Edinburgh the maximum was 50.5°, the minimum 28.6°, and the mean 40.1°. (Owing to a gale, the lowest readings at Edinburgh on Jan. 18 and 19 were false, and have been excluded.) The rainfall at Greenwich measured 0.12 in.; at Glasgow 0.88 in.; and at Edinburgh 0.57 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

WEEK ENDING SATURDAY, 30TH JANUARY, 1909.

[No. 4.

*General Register Office, Charlemont House,
Dublin, 1st February, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 22·5 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality:

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 28·0 | 23·3 | 14·0 | 9·3 | 18·7 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·6 per 1,000, the rates varying from 0·0 in eleven of the districts to 8·0 in Dundalk, the 12 deaths from all causes registered in that district including one from diphtheria and one from enteric fever. Included in the 146 deaths from all causes registered in Belfast are one from measles, one from whooping-cough, one from diphtheria, 2 from enteric fever, 2 from diarrhœal diseases, one from cerebro-spinal fever, and one from *cerebro-spinal meningitis*. Of the 37 deaths from all causes registered in Cork 2 are from measles, one from scarlet fever, and 2 from whooping-cough. Included in the 17 deaths from all causes registered in Londonderry are one from scarlet fever and one from diarrhœa. One death from scarlet fever is included in the 13 deaths from all causes registered in Limerick. Of the 4 deaths from all causes registered in Newry one is from whooping-cough, and one death from measles is included in the 5 deaths from all causes registered in Sligo.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 238—117 boys and 121 girls—and the deaths to 203—89 males and 114 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 26·6 in every 1,000 of the population; omitting the deaths (numbering 9) of persons admitted into public institutions.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-13 of Table II.

from localities outside the Area, the rate was 25·4 per 1,000. During the four weeks ending with Saturday last, the death-rate averaged 25·7, and was 2·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths, which amounted to 203, included 6 deaths from measles, 2 from whooping-cough, 2 from diphtheria, 2 from enteric fever, and one death of an infant from *diarrhoea*. There were also registered one death from cerebro-spinal fever and one death from tetanus. In each of the 3 weeks preceding, deaths from measles were 9, 8, and 9; deaths from whooping-cough were 0, 2, and 2; deaths from diphtheria were one, one, and one; deaths from enteric fever were 5, 3, and 0; deaths from diarrhoeal diseases were 3, one, and one; and deaths from cerebro-spinal fever were 0, 0, and 0.

Eight deaths were attributed to broncho-pneumonia and 6 to *pneumonia* (not defined).

Deaths from all forms of tuberculous disease, which numbered 29, 25, and 27, respectively, in the preceding 3 weeks, rose to 31 deaths in the period under notice. The latter figure includes 18 deaths from tuberculous phthisis (*phthisis*), 4 deaths from tuberculous meningitis, one death from *tabes mesenterica*, and 8 deaths from other varieties of the disease.

There were 4 deaths from carcinoma, 2 deaths from sarcoma, and 5 deaths from cancer, malignant disease (undefined).

Four deaths due to prematurity were recorded.

Convulsions was the registered cause of death of 4 infants under one year of age.

Diseases of the heart and blood vessels accounted for the deaths of 24 persons, and the deaths attributed to bronchitis amounted to 38.

Of 6 deaths attributed to accident or negligence, 3 were of infants under one year of age by overlying in bed.

In 9 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 4 children under one year of age and the deaths of 3 persons aged 60 years and upwards.

Fifty-eight of the persons whose deaths were registered during the week were under 5 years of age (38 being infants under one year, of whom 11 were under one month old, and 67 were aged 60 years and upwards, including 38 persons aged 70 and upwards, of whom 10 were octogenarians and one (a man) was stated to have been aged 99 years.

Ninety-three of the deaths registered during the week occurred in hospitals and other public institutions; of this number 18 took place in the North Dublin Union Workhouse and 22 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 25·1 per 1,000; the rate in the City was 26·3 (North City Districts, 25·2; South, 27·5), and in the Suburbs, 22·2.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·7 per 1,000 inhabitants, the rate for the City being 1·9 (2·0 in the North City Districts, and 1·7 in the South), and for the Suburbs, 1·1.

No. 1. *North City District, East* (Clarence-street, North).—The deaths (14) are equal to an annual rate of 24·7 per 1,000, and include one death from *pneumonia* (not defined), one death from tuberculous disease, and 4 deaths from diseases of the respiratory system.

No. 1. *North City District, West* (Summer-hill).—The deaths (23) are equal to an annual rate of 30·3 per 1,000. Among the deaths were one from each of measles, diphtheria, and enteric fever; there were 2 deaths from each of broncho-pneumonia, *pneumonia* (not defined), and *phthisis*, and there were 4 deaths from diseases of the organs of respiration.

No. 2. *North City District* (Lisburn-street).—The deaths (14) are equivalent to an annual rate of 24·0 per 1,000. Measles and enteric fever each caused one death, there was one death from broncho-pneumonia, tuberculous disease caused 4 deaths, and there were 2 deaths from diseases of the respiratory organs.

No. 3. *North City District* (Benburb-street).—The deaths (14) represent an annual rate of 22·0 per 1,000. The deaths include one from measles, one from *pneumonia* (not defined), 4 from tuberculous disease, and 2 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 29·4 per 1,000 inhabitants; Cooleck and Drumecondra, part of, 22·7; and Finglas and Glasnevin, part of, 20·6. Of the 3 deaths from all causes for Clontarf and Howth, No. 1, part of, one was from bronchitis; the 5 deaths from all causes for Cooleck and Drumecondra, part of, include 2 from tuberculous disease and one from an accidental fall; and of the 3 deaths from all causes for Finglas and Glasnevin, part of, there was one death each from *phthisis* and bronchitis.

No. 1. *South City District* (South Earl-street).—The deaths (30) represent an annual rate of 38·1 per 1,000. Measles, whooping-cough, and cerebro-spinal fever each caused one death, there was also one death from broncho-pneumonia, and one death from *pneumonia* (not defined); there were 2 deaths from tuberculous phthisis, 11 deaths from bronchitis, and one death of an infant from suffocation in bed.

No. 2. *South City District* (Castle-street).—The deaths (7) are equal to an annual rate of 17·0 per 1,000. Each of the following diseases caused one death:—Measles, broncho-pneumonia, *pneumonia* (not defined), and *phthisis*, and there were 2 deaths from bronchitis.

No. 3. *South City District* (Peter-street).—The deaths (23) are equal to an annual rate of 28·1 per 1,000, and include one death from measles, one death from tetanus, 7 deaths from tuberculous disease, and 7 deaths from bronchitis.

No. 4. *South City District* (Grand Canal-street).—The deaths (17) are equivalent to an annual rate of 25·0 per 1,000. Of the deaths one was from diphtheria, 2 were from broncho-pneumonia, one from *phthisis*, 4 from diseases of the respiratory organs, and 2 from accidental causes.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000. Both deaths were caused by tuberculous disease of the lungs.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 28·5; Pembroke, 20·1; Blackrock, 11·9; and Kingstown, 17·8. The deaths from the principal epidemic diseases tabulated for these districts include one death from whooping-cough for Rathmines and Rathgar, and one death from *diarrhoea* for Blackrock. Among the 20 deaths from all causes for Rathmines and Rathgar are 2 from tuberculous disease, 4 from diseases of the respiratory system, and 2 deaths caused accidentally. The 11 deaths from all causes for Pembroke include one from bronchitis; and the 6 deaths from all causes for Kingstown include one from broncho-pneumonia, 2 from tuberculous disease, and one from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 30th January, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 30th January, 1909.

From this it appears that:—

Thirty-three cases of measles were admitted into hospital during the week, 14 were discharged, there was one death, and 66 cases remained under treatment at its close.

Three cases of scarlet fever were admitted to hospital, 13 were discharged, and 42* cases remained under treatment at the close of the week.

One case of typhus remained under treatment at the close of the week.

Nine cases of diphtheria were admitted to hospital, 9 were discharged, there were 2 deaths, and 24 patients remained under treatment at the close of the week.

Seventeen cases of enteric fever were admitted to hospital during the week, 10 were discharged, there were 2 deaths, and 83 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 7 cases of pneumonia were admitted to hospital, 7 were discharged, there were 3 deaths, and 12 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 17·8) was equal to an average annual death-rate of 18·0 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 17·2 per 1,000, the rate for Glasgow being 18·0 and for Edinburgh 17·0.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 30th January. From this Report it appears that of a total of 66 cases notified, 23 were scarlet fever, 20 phthisis, 12 diphtheria, 8 erysipelas, 2 cerebro-spinal fever and one enteric fever. Among the 317 cases of infectious diseases in hospital at the close of the week were 175 cases of scarlet fever, 45 of phthisis, 34 of diphtheria, 21 of whooping-cough, 8 of erysipelas, 6 of enteric fever, 3 of chicken-pox, 3 of cerebro-spinal fever, and 2 of measles.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS AND DEATHS** registered during the Week ending Saturday, 30th January, 1900, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (Exclusive of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 30th January, 1909:—

"Steady and severe frost prevailed in France and Germany throughout this week. In England also, and particularly over the midland and south-eastern counties, there was almost uninterrupted frost—a dense fog enveloping London from Tuesday to Friday. In Eastern Ireland and Scotland the weather, though cold, was much less severe, and in Norway and Iceland it was especially mild and open until nearly the end of the week—it was not until Thursday night that frost returned to Iceland. The cause of this distribution of warmth and cold may be found in the distribution of atmospheric pressure. The centre of an anticyclone, in which the barometer stood at 30.5 inches or upwards, lay over the south of the Baltic, Germany and Austria day after day. England came within its western borders on Saturday, January 23, and the keen easterly winds of the system depressed the thermometer many degrees below freezing point. Over Ireland and Scotland, on the contrary, a comparatively warm Atlantic wind passed northwards, forming part of the circulation round large and deep depressions in the Icelandic region—in one of these the barometer fell to 28.96 inches on Thursday morning at Seydisfjord in the S.E. of Iceland. A secondary V-shaped depression crossed Ireland to the Bristol Channel on Thursday night, causing rain in this country, over Wales and the N.W. of England. In the rear of this system a cold N.W. wind reached Ireland from Iceland on Friday. At 7 a.m. of Thursday the thermometer read 50° at Valencia, but only 22° at Oxford. In Dublin the mean height of the barometer was 30.253 inches, pressure ranging between 30.084 inches at 9 a.m. of Sunday (wind, S.S.E.) and 30.419 inches at 9 p.m. of Tuesday (wind, E.). The corrected mean temperature was 40.7°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 39.1°. On Tuesday the screened thermometers fell to 33.6°, on Thursday they rose to 50.1°. The dominant wind was S.S.E. Rain fell on Thursday to the amount of .089 inch—.002 inch was added on Friday, the total rainfall being .091 inch on one rain-day."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.098 inches. The highest reading (30.260) was on Tuesday at 9 p.m., air calm, and the lowest (29.931) on Sunday at 9 a.m., air calm.

The mean temperature for the week was 39.6°, being 1.8° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Tuesday, on which day the thermometer registered 50.5°, and was lowest on Saturday, the mercury having fallen to 29.3°. The mean of the Dry Bulb for the week was 38.2° and of the Wet Bulb 36.7°. The mean humidity of the air was .88, complete saturation being represented by 1.0. The rainfall during the week measured 0.105 inch.

At Greenwich the mean temperature for the week was 31.8°, the maximum 45.5°, and the minimum 20.8°; at Glasgow the maximum was 45.0°, the minimum 31.5°, and the mean 38.4°; and at Edinburgh the maximum was 44.2°, the minimum 28.4°, and the mean 36.0°. The rainfall at Greenwich measured 0.02 in.; and at Glasgow 0.21 in. There was no rainfall recorded at Edinburgh.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

[OL. XLVI.]

WEEK ENDING SATURDAY, 6TH FEBRUARY, 1909.

[No. 5.]

*General Register Office, Charlemont House
Dublin, 8th February, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 20·7 per 1,000 of their aggregate population, which, for the purposes of these returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 23·3 | 11·0 | 9·3 | 32·7 | 19·8 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in fifteen of the districts to 8·9 in Lurgan, the 7 deaths from all causes registered in that district including one from diphtheria and one from diarrhoea: Among the 130 deaths from all causes registered in Belfast are 2 from whooping-cough, one from diphtheria, and one from diarrhoea. Of the 38 deaths from all causes registered in Cork one is from diphtheria, one from pyrexia (origin uncertain), and one from enteric fever. One death from whooping-cough is included in the 6 deaths from all causes for Newry, and included in the 7 deaths from all causes in Lisburn is one from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 213—22 boys and 91 girls—and the deaths to 196—96 males and 100 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 25·7 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-13 of Table II.

from localities outside the Area, the rate was 24·3 per 1,000. During the five weeks ending with Saturday last, the death-rate averaged 25·7, and was 2·5 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths, amounting to 196, included 7 from measles, one from whooping-cough and 3 deaths from diphtheria. In each of the 3 preceding weeks, deaths from measles were 8, 9, and 6; deaths from whooping-cough were 2, 2, and 2; and deaths from diphtheria were one, one, and 2.

Twenty-three deaths under the heading pneumonia include 3 deaths from lobar pneumonia, 8 deaths from broncho-pneumonia, and 12 deaths from *pneumonia* (not defined).

Of 32 deaths from all forms of tuberculous disease, 24 were from tuberculous phthisis (*phthisis*), there was one death from tuberculous meningitis, there were 2 deaths from *tuberculosis mesenterica*, and 5 deaths from other forms of the disease. In the 3 weeks preceding, deaths from all forms of the disease were 25, 27, and 31, respectively.

There were 3 deaths from carcinoma and one death from cancer (undefined).

The deaths of 4 infants prematurely born were registered.

Diseases of the brain and nervous system caused the deaths of 11 persons, including the deaths of 2 infants under one year of age from *convulsions*.

Thirty-one deaths were ascribed to diseases of the heart or blood vessels, and 33 persons succumbed to bronchitis.

The deaths by violence were 2 in number; both were due to accidental burning, one being the death of a child aged 2 years.

In 3 instances the cause of death was "uncertified," there having been no medical attendance during the last illness; these cases include the death of one child under 5 years of age and the death of one person aged 70 years.

Sixty-three of the persons whose deaths were registered during the week were under 5 years of age (33 being infants under one year, of whom 8 were under one month old, and 68 were aged 60 years and upwards, including 35 persons aged 70 and upwards, of whom 13 were octogenarians and one (a female) was stated to have been aged 90 years.

Eighty-five of the deaths registered during the week occurred in hospitals and other public institutions; of this number 18 took place in the North Dublin Union Workhouse and 20 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week: deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 24·3 per 1,000; the rate in the City was 25·7 (North City Districts, 25·9; South, 25·4), and in the Suburbs, 20·0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 14 per 1,000 inhabitants, the rate for the City being 15 (17 in the North City Districts, and 14 in the South), and for the Suburbs, 11.

No. 1 North City District, East (Clarence-street, North).—The deaths (14) are equal to an annual rate of 24·7 per 1,000, and include one death from diphtheria, one death each from lobar-pneumonia and broncho-pneumonia, 3 deaths from tuberculous disease, and 4 deaths from diseases of the respiratory organs.

No. 1 North City District, West (Summer-hill).—The deaths (20) are equal to an annual rate of 26·4 per 1,000. There were 5 deaths from pneumonia (all forms), one death from *phthisis*, 3 deaths from bronchitis, and one death from accidental burning.

No. 2 North City District (Lisburn-street).—The deaths (9) are equivalent to an annual rate of 15·4 per 1,000. Among the deaths were one from diphtheria, one from broncho-pneumonia, 2 from *pneumonia* (not defined), and one death from tuberculous phthisis.

No. 3 North City District (Benburb-street).—The deaths (26) represent an annual rate of 40·8 per 1,000. The deaths included 2 from measles, one from whooping-cough, one from each of broncho-pneumonia and *pneumonia* (not defined), 5 from tuberculous disease, and 3 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 31·8; and Finglas and Glasnevin, part of, 6·9. The only death recorded for Clontarf and Howth, No. 1, part of, was one from *pneumonia* (not defined). The 7 deaths from all causes for Coolock and Drumcondra, part of, include one death from *phthisis* and 3 deaths from bronchitis; and the only death assigned to Finglas and Glasnevin, part of, was one from *phthisis*.

No. 1 South City District (South Earl-street).—The deaths (16) represent an annual rate of 20·3 per 1,000. Among the deaths there was one from measles, also one death from *pneumonia* (not defined); there were 2 deaths from tuberculous disease, and 5 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (15) are equal to an annual rate of 48·5 per 1,000, and include one death from *pneumonia* (not defined), 3 deaths from tuberculous disease, and 5 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (26) are equal to an annual rate of 31·7 per 1,000. Of the deaths one was due to measles, there was one death from each of broncho-pneumonia and *pneumonia* (not defined), there were 6 deaths from tuberculous phthisis (*phthisis*), 4 deaths from bronchitis, and one death from accidental burning of an infant aged 2 years.

No. 4 South City District (Grand Canal-street).—The deaths (12) are equivalent to an annual rate of 17·6 per 1,000. The total includes one death from measles, 2 deaths from tuberculous phthisis (*phthisis*), and 3 deaths from bronchitis.

New Kilmainham District.—The deaths (4) are equal to an annual rate of 23·2 per 1,000. Included in the 4 deaths there was one from measles and there were 2 from broncho-pneumonia.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 21·4; Pembroke, 11·0; Blackrock, 23·8; and Kingstown, 29·6. The deaths from the principal epidemic diseases tabulated for these districts comprise one death from measles for Rathmines and Rathgar, and one death from diphtheria for Pembroke. Among the 15 deaths from all causes for Rathmines and Rathgar are one death from *pneumonia* (not defined), 3 deaths from tuberculous phthisis (*phthisis*) and 2 deaths from bronchitis; the 6 deaths from all causes for Blackrock include one death from lobar-pneumonia and one death from asthma; the 4 deaths from all causes for Pembroke include one from bronchitis; and of the 10 deaths from all causes for Kingstown there was one death each from broncho-pneumonia and *phthisis*.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 6th February, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 6th February, 1909.

From this it appears that:—

Thirteen cases of measles were admitted into hospital during the week, 9 were discharged, there were 5 deaths, and 65 cases remained under treatment at its close.

Seven cases of scarlet fever were admitted to hospital, 5 were discharged, there was one death, and 43* cases remained under treatment at the close of the week.

Three cases of typhus were admitted to hospital during the week, one was discharged, and three cases remained under treatment at the close of the week.

Eleven cases of diphtheria were admitted to hospital, 2 were discharged, there were 3 deaths, and 30 patients remained under treatment at the close of the week.

Eight cases of enteric fever were admitted to hospital during the week, 7 were discharged, and 84 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 12 cases of pneumonia were admitted to hospital, 2 were discharged, there were 3 deaths, and 19 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 20·3) was equal to an average annual death-rate of 18·7 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 18·5 per 1,000, the rate for Glasgow being 18·0 and for Edinburgh 17·3.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 6th February. From this Report it appears that of a total of 56 cases notified, 29 were scarlet fever, 14 phthisis, 8 diphtheria, 3 erysipelas, and 2 enteric fever. Among the 321 cases of infectious diseases in hospital at the close of the week were 177 cases of scarlet fever, 45 of phthisis, 35 of diphtheria, 23 of whooping-cough, 9 of erysipelas, 7 of enteric fever, 4 of chicken-pox, and 3 of cerebro-spinal fever.

* See note(†) at foot of Table XII.

TABLE II.—**BIRTHS** and **DEATHS** registered during the Week ending Saturday, 6th February, 1969, in the DEELIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Unidentified Deaths: also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

| REGISTRATION—WEEK ENDING SATURDAY, 6TH FEBRUARY, 1900. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1906.
(b) Formerly described as "Simple Continued Fever."
(c) Formerly described as "Simple Continued Fever."
(d) Exclusive of Pneumonia.
(e) Exclusive of Pneumonia.
(f) Having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Markeke for Sligo, and those at Roche's Point for Cork and Queenstown.
(g) Observations at Ordnance Survey Office, Phoenix Park.
(h) Observations by Mr. F. W. Moore, taken at Botanic Gardens, Glasnevin.
(i) Meteorological readings, unavoidably, not taken.
(j) Observations by Mr. John Moore taken at Fitzwilliam-square.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin, and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 6th February, 1903, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.F.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 6th February, 1909:—

"The striking feature of this week was the 'brave west wind' which swept over the British Isles and Central Europe, causing a marvellously rapid thaw in Germany after Tuesday. The sudden melting of the snows—even on the mountains—and downpours of rain led to destructive floods in many Continental regions. During Sunday and Monday the barometer stood high in Ireland and over the Ocean and the day was bright and Biscay, whereas a rather deep depression was central over the Baltic. Sunday was fine in Dublin, and on Monday after a dull, damp morning, by 7 a.m. on Tuesday, however, the barometer had fallen below 28½ inches over the northern half of Ireland, and a vast atmospheric depression was both moving eastward along the Arctic Circle and spreading southeastwards to the British Isles, Denmark, and Germany. Gradients for S.W. and W. winds became steep, and strong winds or gales from these points swept over the greater part of Europe. Temperature rose fast in all places except Lapland, and heavy rains set in at the Danish and German stations. In the course of Thursday night a secondary depression, which rapidly developed intensity, travelled swiftly eastward across Ireland and England. Its centre was found off the Yorkshire coast at 7 a.m. of Friday and in that neighbourhood it caused a violent and disastrous gale. Heavy rain accompanied this disturbance in Ulster, southern Scotland, and northern England. On Thursday temperature rose to 57° at Birmingham and Felixstowe, 56° in London, and 55° in Dublin and at several other stations. On Friday, however, the thermometer fell briskly and Saturday was fair and cold. In Dublin the mean height of the barometer was 29.976 inches, the observed range being from 29.616 inches at 9 p.m. of Thursday (wind, S.W.) to 30.201 inches at 9 a.m. of Saturday (wind, N.W.). The mean temperature was 45.9°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 44.7°. On Sunday the screened thermometers fell to 36.0°, on Thursday they rose to 55.2°. Westerly winds (between S.W. and N.W.) prevailed. The rainfall was .072 inch on one day. Lunar halos appeared on Tuesday and Friday : a lunar corona on Saturday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·819 inches. The highest reading (30·053) was on Saturday at 9 a.m., wind W., and the lowest (29·457) on Thursday at 9 p.m., wind S.W.

The mean temperature for the week was 44·4°, being 5·2° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Thursday, on which day the thermometer registered 54·3°, and was lowest on Saturday, the mercury having fallen to 28·7°. The mean of the Dry Bulb for the week was 43·1° and of the Wet Bulb 41·9°. The mean humidity of the air was ·91, complete saturation being represented by 1·0. The rainfall during the week measured 0·178 inch.

At Greenwich the mean temperature for the week was 42·7°, the maximum 56·1°, and the minimum 29·2°; at Glasgow the maximum was 52·0°, the minimum 31·5°, and the mean 40·4°; and at Edinburgh the maximum was 51·2°, the minimum 29·8°, and the mean 39·6°. The rainfall at Greenwich measured 0·04 in.; at Glasgow 1·55 ins.; and at Edinburgh 0·83 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 13TH FEBRUARY, 1909.

[No. 6.

*General Register Office, Charlemont House,
Dublin, 15th February, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 20·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality:

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 14·0 | 9·3 | 32·7 | 32·7 | 22·2 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in fifteen of the districts to 4·7 in Wexford, the 7 deaths from all causes registered in that district including one from diarrhœa. Among the 116 deaths from all causes registered in Belfast are one from measles, 2 from diarrhœal diseases, and 3 from cerebro-spinal fever. Of the 15 deaths from all causes registered in Londonderry one is from scarlet fever, and one death from the same disease is included in the 17 deaths from all causes registered in Limerick ; and included in the 7 deaths from all causes registered in Newry is one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 231—122 boys and 109 girls—and the deaths to 203—107 males and 96 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 26·6 in every 1,000 of the population ; omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, the rate was 25·1 per 1,000. During the six weeks ending with Saturday last, the death-rate averaged 25·8, and was 2·2 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

The deaths amounted to 203, and include one death from measles, one death from scarlet fever, 5 deaths from whooping-cough, one death from diphtheria, 4 deaths from enteric fever, 2 deaths from diarrhoeal diseases, and 2 deaths from influenza. In each of the 3 preceding weeks, deaths from measles were 9, 6, and 7; deaths from scarlet fever were 0, 0, and 0; deaths from whooping-cough were 2, 2, and one; deaths from diphtheria were one, 2, and 3; deaths from enteric fever were 0, 2, and 0; deaths from diarrhoeal diseases were one, one, and 0; and deaths from influenza were 2, 0, and 0.

The deaths of 16 persons were attributed to broncho-pneumonia, and of 8 to *pneumonia* (not defined).

Tuberculous disease was the registered cause of 31 deaths; this number includes 21 deaths from tuberculous phthisis (*phthisis*), 2 deaths from tuberculous meningitis, one death from *tabes mesenterica*, and 7 deaths from other forms of the disease. In the 3 preceding weeks, deaths from all forms of tuberculous disease numbered 27, 31, and 32 respectively.

There were 3 deaths from carcinoma, one death from sarcoma, and 5 deaths from cancer, malignant disease (undefined).

The deaths of 6 infants were ascribed to prematurity.

Diseases of the brain and nervous system caused 12 deaths, including those of 6 infants under one year of age from *convulsions*.

To diseases of the heart and blood vessels the deaths of 21 persons were attributed.

Bronchitis caused the deaths of 43 persons.

Of 4 deaths from accident or negligence, one was that of a child 4 years of age, from scalds.

In 5 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 4 children under 5 years of age (including 3 infants under one year old).

Eighty of the persons whose deaths were registered during the week were under 5 years of age (47 being infants under one year, of whom 11 were under one month old, and 47 were aged 60 years and upwards, including 23 persons aged 70 and upwards, of whom 6 were octogenarians).

Eighty-four of the deaths registered during the week occurred in hospitals and other public institutions; of this number 16 took place in the North Dublin Union Workhouse, 18 in the South Dublin Union Workhouse, and 2 in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 25.1 per 1,000; the rate in the City was 28.4 (North City Districts, 27.2; South, 29.6), and in the Suburbs, 14.3.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1.7 per 1,000 inhabitants, the rate for the City being 1.9 (2.0 in the North City Districts, and 1.7 in the South), and for the Suburbs, 1.1.

No. 1 North City District, East (Clarence-street, North).—The deaths (15) are equal to an annual rate of 26.4 per 1,000, and include one death from scarlet fever, one death from influenza, 2 deaths from tuberculous disease, 2 deaths from bronchitis, and the death of an infant from neglect at birth.

No. 1 North City District, West (Summer-hill). The deaths (23) are equal to an annual rate of 30.3 per 1,000. There was one death from whooping-cough, there were 2 deaths from diarrhoeal diseases, 3 deaths from *pneumonia* (not defined), 4 deaths from tuberculous disease, and 6 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (13) are equivalent to an annual rate of 22.3 per 1,000. Whooping-cough and broncho-pneumonia each caused one death, and there were 5 deaths from bronchitis.

No. 3 North City District (Benburb-street). The deaths (19) represent an annual rate of 29.8 per 1,000. The deaths included one from broncho-pneumonia, 6 from tuberculous disease, and 4 deaths from diseases of the respiratory system.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 29.4 per 1,000 inhabitants: Coolock and Drumecondra, part of, 22.7; and Finglas and Glasnevin, part of, 27.4. Of the 3 deaths from all causes for Clontarf and Howth, No. 1, part of, there was one death each from measles, broncho-pneumonia, and tuberculous disease: the 5 deaths from all causes for Coolock and Drumecondra, part of, include one each from broncho-pneumonia, tuberculous disease, and bronchitis; and of the 4 deaths from all causes for Finglas and Glasnevin, part of, one was from *pneumonia* (not defined) and one from bronchitis.

No. 1 South City District (South Earl-street).—The deaths (28) represent an annual rate of 35.6 per 1,000. Among the deaths was one from each of whooping-cough and enteric fever; there were 3 deaths from broncho-pneumonia and 2 deaths from *pneumonia* (not defined), 3 deaths from tuberculous disease, 10 deaths from bronchitis, and 2 deaths of infants from neglect.

No. 2 South City District (Castle-street).—The deaths (13) are equal to an annual rate of 31.5 per 1,000, and include one death from *pneumonia* (not defined), 4 deaths from tuberculous phthisis (*phthisis*), and 3 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (28) are equal to an annual rate of 34.1 per 1,000. Of the deaths one was caused by enteric fever, 5 by broncho-pneumonia, one by *pneumonia* (not defined), 5 by tuberculous disease, and 5 by diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20.6 per 1,000. Enteric fever caused 2 deaths, tuberculous phthisis one death, and diseases of the respiratory system 4 deaths.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11.6 per 1,000. One of the deaths was that of a child aged 4 years, and was caused by scalds.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 10.0; Pembroke, 18.3; Blackrock, 11.9; and Kingstown, 17.8. The deaths from the principal epidemic diseases tabulated for these districts include one death from whooping-cough for Rathmines and Rathgar, and one death from whooping-cough for Pembroke. Of the 7 deaths from all causes for Rathmines and Rathgar there were 3 from broncho-pneumonia and one from bronchitis; the 10 deaths from all causes for Pembroke include 3 from tuberculous disease and one from bronchitis; of the 2 deaths from all causes for Blackrock one was from bronchitis; and the 6 deaths from all causes for Kingstown include one death each from influenza and bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 13th February, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) The notification of cerebro-spinal meningitis for Belfast has been extended for one year from 1st January, and one case was notified in each of the following weeks:—Week ending 2nd, 9th, 16th, 23rd, and 30th January—total, 5 cases.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 13th February, 1909.

From this it appears that:—

Eighteen cases of measles were admitted into hospital during the week, 27 were discharged, and 56 cases remained under treatment at its close.

Nine cases of scarlet fever were admitted to hospital, 10 were discharged, there was one death, and 41* cases remained under treatment at the close of the week.

One case of typhus was admitted to hospital during the week, and four cases remained under treatment at the close of the week.

Eight cases of diphtheria were admitted to hospital, 4 were discharged, there was one death, and 33 patients remained under treatment at the close of the week.

Seven cases of enteric fever were admitted to hospital during the week, 18 were discharged, there were 2 deaths, and 71 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 14 cases of pneumonia were admitted to hospital, 6 were discharged, and 27 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 17·8) was equal to an average annual death-rate of 17·5 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 18·2 per 1,000, the rate for Glasgow being 18·3 and for Edinburgh 14·8.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 13th February. From his Report it appears that of a total of 65 cases notified, 23 were scarlet fever, 23 phthisis, 12 diphtheria, erysipelas, and one cerebro-spinal fever. Among the 336 cases of infectious diseases in hospital at the close of the week were 168 cases of scarlet fever, 49 of phthisis, 39 of diphtheria, 31 of whooping-cough, 9 of erysipelas, 7 of enteric fever, 7 of chicken-pox, 4 of cerebro-spinal fever, and one of measles.

* See note (*) at foot of Table XII.

REGISTRATION—WEEK ENDING SATURDAY, 18TH FEBRUARY, 1909.

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909.
(b) Formerly described as "Simple Continued Fever."
(c) Having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Markree for Sligo, and those at Roche's Point for Cork and Queenstown.
(d) Observations taken at Donaghadee.
(e) Observations taken at Armagh.
(f) Observations taken at Lisburn.
(g) Observations taken at Markree.
(h) Observations taken at Portadown.
(i) Observations taken at Sligo.
(j) Observations taken at Queenstown.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 13th February, 1909:—

"At the beginning of this week a cold continental aircurrent and a warm, moist oceanic aircurrent were in close juxtaposition over Western Europe—for example, at 7 a.m. of Sunday the thermometer read 22° at Nottingham and in Brussels, whereas it stood at 50° at Valentia, Co. Kerry. In Dublin fresh to squally S.S.E. winds blew throughout this day, and large quantities of rain fell along the west coast of Ireland as an Atlantic depression first approached, then retreated and travelled away to the north-westward. On Tuesday morning a large atmospheric disturbance was central off the west of Iceland, the barometer having fallen to 28.75 inches at Reykjavik; and a V-shaped secondary was crossing Ireland. These systems subsequently merged into one elongated depression, the central area of which stretched on Wednesday morning from the Shetlands to the Thames Estuary. Squalls, cold rain, hail and sleet or snow, occurred generally as the disturbance travelled southwards to France and finally south-eastwards to Italy. Behind these depressions came an area of high atmospheric pressure from the north, bringing very keen, dry polar winds in its train—at 7 a.m. of Friday the thermometer read only 8° in Berlin and 18° in Brussels. At the same hour the readings in Iceland ranged from 39° to 44° under the influence of a southerly wind off the Ocean. Light showers of very fine snow fell in Dublin on Friday forenoon, and in this City the sky remained more or less cloudy till 1 p.m. of Saturday, when it cleared and the sun shone brightly and with power. In Dublin the mean height of the barometer was 30.029 inches, pressure ranging between 29.463 inches at 9 p.m. of Tuesday (wind, W.N.W.) and 30.656 inches at 9 p.m. of Saturday (wind, calm). The mean temperature was 40.4°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 40.4°. On Wednesday the screened thermometers rose to 46.3°, on Saturday they fell to 32.2°. The rainfall was 1.84 inch on 3 days, 1.13 inch being measured on Wednesday. Hail fell on Wednesday, a little snow on Friday. Sharp frost occurred on Friday night over the greater part of Ireland—at Birr Castle the sheltered thermometer fell to 22°."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·882 inches. The highest reading (30·487) was on Saturday at 9 p.m., air calm, and the lowest (29·320) on Tuesday at 9 p.m., wind W.

The mean temperature for the week was 38·6°, being 1·1° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Monday, on which day the thermometer registered 47·1°, and was lowest on Saturday, the mercury having fallen to 24·9°. The mean of the Dry Bulb for the week was 38·9° and of the Wet Bulb 36·4°. The mean humidity of the air was 80, complete saturation being represented by 100. The rainfall during the week measured 0·215 in.

At Greenwich the mean temperature for the week was 34·8°, the maximum 44·1°, and the minimum 26·1°; at Glasgow the maximum was 44·0°, the minimum 30·0°, and the mean 37·5°; and at Edinburgh the maximum was 40·2°, the minimum 28·6°, and the mean 35·4°. The rainfall at Greenwich measured 0·29 in.; at Glasgow 0·29 in.; and at Edinburgh 0·25 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 20th FEBRUARY, 1900.

[No. 7.]

*General Register Office, Charlemont House,
Dublin, 22nd February, 1900.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 21·5 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,808.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| DOWNS, &c. | Week ending | | | | Average Rate for 4 weeks | | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks |

| | | | | | | | Wexford. | 93 | 327 | 327 | 140 | 222 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·1 per 1,000, the rates varying from 1·0 in twelve of the districts to 9·8 in Kilkenny, the 7 deaths from all causes registered in that district including 2 from measles. Among the 127 deaths from all causes registered in Belfast are four from diarrhoeal diseases. Of the 12 deaths from all causes registered in Limerick one is from enteric fever. Included in the 21 deaths from all causes registered in Waterford are one from whooping-cough and one from diarrhoea. One death from diphtheria is included in the 10 deaths from all causes registered in Galway. Of the 8 deaths from all causes registered in Newry one is from whooping-cough. Two deaths from diphtheria are included in the 7 deaths from all causes for Lisburn.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 224—114 boys and 110 girls—and the deaths to 211—107 males and 104 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 27·6 in every 1,000 of the population; omitting the deaths (numbering 14) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-12 of Table II.

from localities outside the Area, the rate was 25·8 per 1,000. During the seven weeks ending with Saturday last, the death-rate averaged 26·1, and was 1·9 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths amounting to 211, include 4 deaths from measles, one death from scarlet fever, 2 deaths from whooping-cough, 2 deaths from diphtheria, one death from enteric fever, and one death from cerebro-spinal fever. In each of the 3 preceding weeks, deaths from measles were 6, 7, and one; deaths from scarlet fever were 0, 0, and one; deaths from whooping-cough were 2, one, and 5; deaths from diphtheria were 2, 3, and one; deaths from enteric fever were 2, 0, and 4; and deaths from cerebro-spinal fever were one, 0, and 0, respectively.

Seven deaths were ascribed to broncho-pneumonia and 5 to *pneumonia* (not defined).

The total deaths from all forms of tuberculous disease amounted to 43, including 28 deaths from tuberculous phthisis (*phthisis*), 6 deaths from tuberculous meningitis, one death from *tabes mesenterica*, and 8 deaths from other forms of the disease. In the three previous weeks, deaths from all forms of tuberculous disease were 31, 32, and 31, respectively.

There were 5 deaths from carcinoma, two from sarcoma, and 4 from cancer, malignant disease (undefined).

Prematurity caused the deaths of 4 infants.

Deaths from diseases of the brain and nervous system numbered 6; this figure includes the deaths of an infant under one year, and another aged one year from *convulsions*.

Diseases of the circulatory system and bronchitis caused 37 deaths and 33 deaths, respectively.

Of 5 deaths classed to accidental violence, 3 were by burns (2 of this number being deaths of children under 5 years of age), one was by drowning and one was of an infant by suffocation in bed.

In 5 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 2 infants under one year of age and the deaths of 2 persons aged 60 years and upwards.

Fifty-eight of the persons whose deaths were registered during the week were under 5 years of age (35 being infants under one year, of whom 9 were under one month old) and 63 were aged 60 years and upwards, including 44 persons aged 70 and upwards, of whom 8 were octogenarians, and 4 (one male and 3 females) were stated to have been aged 96, 95, 93 and 90 years, respectively.

Ninety-seven of the deaths registered during the week occurred in hospitals and other public institutions; of this number 21 took place in the North Dublin Union Workhouse, and 27 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 25·8 per 1,000; the rate in the City was 27·5 (North City Districts, 28·9; South, 26·1), and in the Suburbs, 20·0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·3 per 1,000 inhabitants, the rate for the City being 1·5 (1·7 in the North City Districts, and 1·4 in the South), and for the Suburbs, 0·6.

No. 1 North City District, East (Clarence-street, North).—The deaths (15) are equal to an annual rate of 26·4 per 1,000. There were 3 deaths from tuberculous disease and 4 deaths from diseases of the respiratory system.

No. 1 North City District, West (Summer-hill).—The deaths (23) are equal to an annual rate of 30·3 per 1,000. Tuberculous disease caused 5 deaths, there were 5 deaths from diseases of the respiratory system, and there was one death from accidental burning.

No. 2 North City District (Lisburn-street).—The deaths (25) are equivalent to an annual rate of 42·9 per 1,000. The deaths include one from measles, 4 from broncho-pneumonia, one from *pneumonia* (not defined), 2 from tuberculous phthisis (*phthisis*), 4 from bronchitis, and 3 from accidental violence.

No. 3 North City District (Benburb-street).—The deaths (19) represent an annual rate of 29·8 per 1,000. Measles and enteric fever each caused one death, there were 2 deaths from broncho-pneumonia, one death from *pneumonia* (not defined), and 7 deaths from tuberculous disease.

Other North City Districts. The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumecondra, part of, 18·1 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 6·9. Among the 4 deaths from all causes for Coolock and Drumecondra, part of, one was from scarlet fever one from diphtheria, and one from bronchitis.

No. 1 South City District (South Earl-street).—The deaths (27) represent an annual rate of 34·3 per 1,000, and include 2 deaths from measles, one from whooping-cough, 4 from tuberculous disease, and 13 deaths from diseases of the respiratory system.

No. 2 South City District (Castle-street).—The deaths (18) are equal to an annual rate of 43·6 per 1,000. Among the deaths there were as follows:—One from whooping-cough, and one death from cerebro-spinal fever, also one death from *pneumonia* (not defined), 5 deaths from tuberculous disease, and 2 deaths from diseases of the respiratory system.

No. 3 South City District (Peter-street).—The deaths (17) are equal to an annual rate of 20·7 per 1,000. The total includes one death from *pneumonia* (not defined), 3 deaths from tuberculous disease, and 6 deaths from diseases of the organs of respiration.

No. 4 South City District (Grand Canal-street).—The deaths (11) are equivalent to an annual rate of 16·2 per 1,000. Tuberculous disease caused 4 deaths and bronchitis caused 2 deaths.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000, and include one death from phthisis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 21·4; Pembroke, 20·1; Blackrock, 11·9; and Kingstown, 20·7. The only death from any of the principal epidemic diseases tabulated for these districts was one from diphtheria for Rathmines and Rathgar. Among the 15 deaths from all causes for the last-named district were one from broncho-pneumonia, 2 from tuberculous disease and 3 from diseases of the respiratory system: the 11 deaths from all causes for Pembroke include one from *pneumonia* (not defined), 3 from phthisis, and 3 from bronchitis; and of the 7 deaths from all causes for Kingstown there were 3 from diseases of the heart and blood vessels.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 20th February, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 20th February, 1909.

From this it appears that:—

Fifteen cases of measles were admitted into hospital during the week, 23 were discharged, there were 2 deaths, and 46 cases remained under treatment at its close.

Four cases of scarlet fever were admitted to hospital, 10 were discharged, and *35 cases remained under treatment at the close of the week.

Four cases of typhus remained under treatment in hospital at the close of the week.

Twelve cases of diphtheria were admitted to hospital, 3 were discharged, there was one death, and 41 patients remained under treatment at the close of the week.

Thirteen cases of enteric fever were admitted to hospital during the week, 15 were discharged, there were 2 deaths, and 67 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 14 cases of pneumonia were admitted to hospital, 1 were discharged, there were 2 deaths, and 30 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 18·7) was equal to an average annual death-rate of 18·1 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 19·8 per 1,000, the rate for Glasgow being 19·9 and for Edinburgh 17·8.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 20th February. From his Report it appears that of a total of 62 cases notified, 21 were scarlet fever, 21 diphtheria, 14 phthisis, erysipelas, and one enteric fever. Among the 345 cases of infectious diseases in hospital at the close of the week were 172 cases of scarlet fever, 49 of diphtheria, 44 of phthisis, 33 of whooping-cough, 7 of erysipelas, 7 of enteric fever, 6 of chicken-pox, 3 of cerebro-spinal fever, and 3 of measles.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 20th February, 1969, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week and for each of the two Weeks immediately preceding.

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909.
(b) Formerly described as "Simple Continued Fever."
(c) Exclusive of Pneumonia.
(d) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Markeel for Sligo, and those at Roche's Point for Cork and Queenstown.
(e) Observations at Ordnance Survey Office, Phoenix Park.
(f) Observations by Sir John Moore taken at Fitzwilliam-square.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin, and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 20th February, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 20th February, 1909:—

"This week witnessed the gradual drifting of a system of high atmospheric pressure (anticyclone) eastwards from Ireland to Central and Eastern Europe. On Sunday morning the barometer stood at 30.6 inches or upwards over nearly the whole of Ireland and along the Welsh coast from Holyhead to Pembroke. A severe frost prevailed in Ireland, the screened thermometer standing as low as 21° at 7 a.m. at Birr Castle—it had been down to 19° earlier in the morning. Meanwhile, a vast depression was moving south-eastwards across Scandinavia, the barometer reading being only 29 inches at Haparanda on the Gulf of Bothnia. Another low pressure system lay over Italy and the Mediterranean Basin in general. In Dublin there was a thick rime in the morning, but the afternoon was cloudy and milder. The N.W. winds of the Scandinavian disturbance brought a higher temperature, dampness, clouds, and light showers to the British Isles on Monday, but Tuesday was again colder. A general fall of the barometer at this time indicated that the anticyclone was dispersing as it spread eastward, and on Wednesday it seemed as if an Atlantic depression was about to come in over Ireland. But towards Thursday morning the anticyclone began to show increased energy and to spread westward again. This state of things caused freshening S.E. and S. winds in Ireland and some increase of temperature as well as of moisture in the air, whereas the frost on the Continent became intense, the thermometer falling to zero F. at Munich early on Friday morning, while even in England a minimum of 23° was recorded at Nottingham on Saturday before dawn. In Dublin the mean height of the barometer was 30.178 inches, the mercury falling from 30.609 inches at 9 a.m. of Sunday (wind, W.S.W.) to 29.857 inches at 7 a.m. of Thursday (wind, S.). The mean temperature was 41.7°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 41.3°. The screened thermometers fell to 28.0° on Sunday and rose to 50.0° on Saturday. The rainfall was .011 inch on one 'rain day.' The prevalent winds were—at first W., afterwards S.S.E."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.014 inches. The highest reading (30.450) was on Sunday at 9 a.m., wind E., and the lowest (29.729) on Thursday at 9 a.m., wind S.E.

The mean temperature for the week was 39.5°, being 0.3° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 51.8°, and was lowest on Sunday, the mercury having fallen to 23.0°. The mean of the Dry Bulb for the week was 39.9° and of the Wet Bulb 37.9°. The mean humidity of the air was .84, complete saturation being represented by 1.0. The rainfall during the week measured 0.023 inch.

At Greenwich the mean temperature for the week was 37.4°, the maximum 50.0°, and the minimum 25.0°; at Glasgow the maximum was 51.0°, the minimum 30.8°, and the mean 40.7°; and at Edinburgh the maximum was 50.4°, the minimum 30.6°, and the mean 40.1°. The rainfall at Greenwich measured 0.01 in.; and at Glasgow 0.01 in. There was no rainfall recorded at Edinburgh.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

WEEK ENDING SATURDAY, 27TH FEBRUARY, 1909.

[No. 8.

General Register Office, Charlemont House,
Dublin, 1st March, 1909.

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 23·0 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in sixteen of the districts to 4·9 in Kilkenny, the 4 deaths from all causes registered in that district including one from measles. Of the 156 deaths from all causes for Belfast there is one death from cerebro-spinal fever, but no mortality from any of the principal epidemic diseases‡ is recorded. Among the 34 deaths from all causes registered in Cork are one from measles and one from whooping-cough. Of the 19 deaths from all causes in Londonderry one is from whooping-cough. One death from typhus is included in the 13 deaths from all causes in Waterford, and of the 3 deaths from all causes in Wexford one is from measles:

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 227—119 boys and 108 girls—and the deaths to 197—88 males and 109 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 25·8 in every 1,000 of the population; omitting the deaths (numbering 11) of persons admitted into public institutions from localities outside the Area, the rate was 24·3 per 1,000. During the eight weeks ending

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

with Saturday last, the death-rate averaged 26.1, and was 2.2 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths from all causes which amounted to 197, included one death from measles, 7 deaths from whooping-cough, one death from *pyrexia* (origin uncertain), three deaths from enteric fever, 5 deaths from diarrhoeal diseases, and 4 deaths from influenza. In the 3 preceding weeks, deaths from measles were 7, one, and 4; deaths from whooping-cough were one, 5, and 2; deaths from *pyrexia* were 0, 0, and 0; deaths from enteric fever were 0, 4, and one; deaths from diarrhoeal diseases were 0, 2, and 0; and deaths from influenza were 0, 2, and 0, respectively.

There were 5 deaths from broncho-pneumonia and 7 deaths from *pneumonia* (not defined).

Deaths from all forms of tuberculous diseases which had numbered 32, 31, and 43 in each of the three preceding weeks, were 27 in the period under notice, the latter total including 19 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, 2 deaths from *tabes mesenterica*, and 3 deaths from other forms of the disease.

Carcinoma caused the deaths of 3 persons, and 5 deaths were attributed to cancer, malignant disease (undefined).

The deaths of 4 infants, prematurely born, were registered.

Of 17 deaths from diseases of the brain and nervous system there were 5 from *convulsions*; of these 4 were of infants under one year of age and one was of a child aged one year and 4 months.

Thirty-one of the deaths registered were caused by diseases of the heart and blood vessels, and the deaths attributed to bronchitis numbered 32.

The deaths from accidental violence numbered 3, namely one death by an accident with a cart, one death by a fall in building operations, and one death by accidental burning.

In 6 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 3 children under 5 years of age (including 2 infants under one year old) and the death of one person aged 70 years.

Fifty-nine of the persons whose deaths were registered during the week were under 5 years of age (36 being infants under one year, of whom 11 were under one month old) and 62 were aged 60 years and upwards, including 27 persons aged 70 and upwards, of whom 3 were octogenarians, and one (a female) was stated to have been aged 97 years.

Sixty-three of the deaths registered during the week occurred in hospitals and other public institutions; of this number 16 took place in the North Dublin Union Workhouse, and 10 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 21.3 per 1,000; the rate in the City was 25.8 (North City Districts, 27.9; South, 23.7), and in the Suburbs, 19.4.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2.2 per 1,000 inhabitants, the rate for the City being 2.6 (2.3 in the North City Districts, and 2.8 in the South), and for the Suburbs, 1.1.

No. 1 North City District, East (Clarence-street, North).—The deaths (22) are equal to an annual rate of 38.8 per 1,000, and include 2 deaths from influenza, one from *diarrhoea*, 2 from broncho-pneumonia, 6 from tuberculous disease, and 5 from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (17) are equal to an annual rate of 22.4 per 1,000. The deaths included one from whooping-cough, 3 from tuberculous phthisis (*phthisis*), and 3 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (17) are equivalent to an annual rate of 29.2 per 1,000. Among the deaths were one from influenza, one from *pyrexia* (origin uncertain), one from *diarrhoea*, one from *pneumonia* (not defined), 3 from tuberculous disease, and 2 from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (17) represent an annual rate of 26.7 per 1,000. Whooping-cough and enteric fever each caused one death; there were 2 deaths from broncho-pneumonia, one death from tuberculous meningitis, 2 deaths from diseases of the respiratory system, and one accidental death.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 36.3 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0.0; and Finglas and Glasnevin, part of, 20.6. Of the 8 deaths from all causes for Coolock and Drumcondra, part of, there was one death each from influenza and tuberculous phthisis, and 2 were from bronchitis; and the 3 deaths from all causes for Finglas and Glasnevin, part of, include one from *diarrhoea* and one from bronchitis.

No. 1 South City District (South Earl-street).—The deaths (17) represent an annual rate of 21.6 per 1,000. The deaths include one from whooping-cough, 4 from tuberculous disease, and 5 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (10) are equal to an annual rate of 21.2 per 1,000. Among the deaths were 2 from whooping-cough, one from *phthisis*, and 2 from bronchitis.

No. 3 South City District (Peter-street).—The deaths (23) are equal to an annual rate of 28.1 per 1,000. Whooping-cough caused 2 deaths, there was one death from epidemic diarrhoea, also one death from *pneumonia* (not defined), tuberculous disease caused 4 deaths, there were 4 deaths from diseases of the respiratory system, and there was one accidental death.

No. 4 South City District (Grand Canal-street).—The deaths (15) are equivalent to an annual rate of 22.0 per 1,000. Measles and enteric fever each caused one death, there were 2 deaths from *pneumonia* (not defined), one death from tuberculous phthisis, and 2 deaths from bronchitis.

North Kilmainham District.—The deaths (3) are equal to an annual rate of 17.4 per 1,000. The deaths did not include one from any of the general diseases or of the respiratory system.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 14.3; Pembroke, 11.0; Blackrock, 23.8; and Kingstown, 41.4. The deaths from the principal epidemic diseases tabulated for these districts include one each from enteric fever and *diarrhoea* for Rathmines and Rathgar. Among the 10 deaths from all causes for Rathmines and Rathgar are one from broncho-pneumonia, one from *pneumonia* (not defined), and one from *phthisis*; the 6 deaths from all causes for Pembroke include one from bronchitis; of the 4 deaths from all causes for Blackrock one death was caused by bronchitis; and of the 14 deaths from all causes for Kingstown there were 2 from *pneumonia* (not defined) and 4 from diseases of the respiratory system.

*See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 27th February, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 27th February, 1909.

From this it appears that:—

Twenty-eight cases of measles were admitted into hospital during the week, 14 were discharged, and 60 cases remained under treatment at its close.

Four cases of scarlet fever were admitted to hospital, 3 were discharged, and 36* cases remained under treatment at the close of the week.

Four cases of typhus remained under treatment in hospital at the close of the week.

Eight cases of diphtheria were admitted to hospital, 7 were discharged, and 42 patients remained under treatment at the close of the week.

Six cases of enteric fever were admitted to hospital during the week, 8 were discharged, there was one death, and 64 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 13 cases of pneumonia were admitted to hospital, 7 were discharged, there was one death, and 34 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 19·9) was equal to an average annual death-rate of 19·1 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 20·0 per 1,000, the rate for Glasgow being 21·1 and for Edinburgh 21·4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 27th February. From it it appears that of a total of 72 cases notified, 33 were scarlet fever, 20 diphtheria, 16 phthisis, 1 erysipelas, and one enteric fever. Among the 373 cases of infectious diseases in hospital at the close of the week were 173 cases of scarlet fever, 68 of diphtheria, 47 of phthisis, 41 of whooping-cough, 9 of erysipelas, 6 of enteric fever, 5 of chicken-pox, 3 of measles, and 2 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin, and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 27th February, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 27th February, 1909:—

"Taken as a whole, this week was the coldest of the winter in England. In Ireland and Scotland it was by no means so severe owing to the admixture of warmer air off the Ocean with the keen anticyclonic air, which had spread to England from the Continent in the latter part of the previous week. On Sunday an anticyclone, in which the barometer stood above 30·5 inches, lay over the North Sea, Holland, and the west of Germany; on the other hand, the barometer was as low as 29·25 inches at Reykjavik in Iceland. Fresh to strong S.S.E. winds blew over Ireland, the thermometer reading 51° at 7 a.m. at Blacksod Point in Mayo, whereas it was down to 24° at Nottingham and 27° at Oxford at that hour. By Monday the high pressure system had spread westward across England to Wales, the frost increasing over the English midlands. Copious rainfalls occurred in Western Ireland—90 inch being measured at Valentia—but in other districts the weather remained very dry. Early on Tuesday morning the thermometer sank to 18° at Bath, 19° at Oxford, 21° at Nottingham and 23° in the heart of London. The weather was still mild over the greater part of Ireland and Scotland—in Dublin, however, a minimum of 37° was recorded. On Wednesday morning there was a local chill in Central Ireland, a minimum of 25° being reported from Birr Castle. From this time to the end of the week temperature was more evenly distributed over the British Islands, the thermometer having risen somewhat in England, fallen in Ireland and Scotland. On Saturday a depression advanced from the northward, causing clouds and a slight rainfall. In Dublin the mean height of the barometer was 30·369 inches, the range of pressure being from 30·513 inches at 9 a.m. of Friday (wind, N.E.) and 30·196 inches at 9 p.m. of Saturday (wind, N.N.W.). The corrected mean temperature was 43·1°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 41·9°. The screened thermometers rose to 51·5° on Monday and fell to 32·4°. The prevalent winds were S.S.E. and N.E. A little fine hail fell on Friday, slight rain on Saturday, rain and sleet on Sunday morning, the 28th, the total yielding 0·78 inch in the gauge."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.209 inches. The highest reading (30.350) was on Friday at 9 a.m., wind E., and the lowest (30.032) on Saturday at 9 p.m., wind N.N.W.

The mean temperature for the week was 41.2°, being 1.1° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 52.8°, and was lowest on Saturday, the mercury having fallen to 29.7°. The mean of the Dry Bulb for the week was 40.2° and of the Wet Bulb 38.6°. The mean humidity of the air was .88, complete saturation being represented by 1.0. The rainfall during the week measured 0.030 inch.

At Greenwich the mean temperature for the week was 33.4°, the maximum 52.1°, and the minimum 19.4°; at Glasgow the maximum was 54.4°, the minimum 28.0°, and the mean 39.9°; and at Edinburgh the maximum was 53.9°, the minimum 26.6°, and the mean 39.3°. The rainfall at Greenwich measured 0.08 in.; at Glasgow 0.02 in.; and at Edinburgh 0.15 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

WEEK ENDING SATURDAY, 6TH MARCH, 1909.

[No. 9.

*General Register Office, Charlemont House,
Dublin, 8th March, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 22·5 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 32·7 | 14·0 | 14·0 | 37·4 | 24·5 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in fifteen of the districts to 4·4 in Lurgan, the 4 deaths from all causes registered in that district including one from enteric fever. Among the 160 deaths from all causes registered in Belfast are 3 from whooping-cough, one from diphtheria, and 2 from diarrhoeal diseases. Of the 35 deaths from all causes registered in Cork one is from scarlet fever, one from typhus, and one from whooping-cough. Included in the 17 deaths from all causes registered in Londonderry is one from diphtheria, and one death from diphtheria is also included in the 5 deaths from all causes registered in Galway.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 214—90 boys and 124 girls—and the deaths to 216—108 males and 108 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 28·3 in every 1,000 of the population; omitting the deaths (numbering 13) of persons admitted into public institutions from localities outside the Area, the rate was 26·6 per 1,000. During the nine weeks ending

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-13 of Table II.

with Saturday last, the death-rate averaged 26·3, and was 2·2 below the mean rate for the corresponding portions of the ten years 1899-1908.

Included in the total of deaths from all causes were 5 from measles, one from scarlet fever, 3 from whooping-cough, 4 from diphtheria, 2 from *diarrhœa*, and 5 deaths from influenza. In each of the 3 preceding weeks, deaths from measles were one, 4, and one; deaths from scarlet fever were one, one, and 0; deaths from whooping-cough were 5, 2, and 7; deaths from diphtheria were one, 2, and 0; deaths from diarrhœal diseases were 2, 0, and 5; and deaths from influenza were 2, 0, and 4.

The deaths from pneumonia (all forms), included one death from lobar-pneumonia, 12 deaths from broncho-pneumonia, and 6 deaths from *pneumonia* (not defined).

Tuberculous disease caused the deaths of 51 persons, this number includes 35 deaths from tuberculous phthisis (*phthisis*), 8 deaths from tuberculous meningitis, one death each from tuberculous peritonitis and *tuberculous mesenterica*, and 6 deaths from other forms of the disease. In the three preceding weeks, deaths from all forms of tuberculous disease were 31, 43, and 27.

Carcinoma and sarcoma each caused 2 deaths, and 4 deaths were attributed to cancer (undefined).

The death of one prematurely born infant was recorded.

There were 6 deaths from *convulsions* (all under 5 years of age), 3 being under one month old.

Twenty-six deaths were caused by diseases of the heart and blood vessels, and the deaths from bronchitis amounted to 34.

There were 3 deaths of infants which were attributed to accident or negligence.

In 3 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the death of one infant under one year of age.

Seventy-one of the persons whose deaths were registered during the week were under 5 years of age (31 being infants under one year, of whom 10 were under one month old) and 55 were aged 60 years and upwards, including 28 persons aged 70 and upwards, of whom 6 were octogenarians, and one (a female) was stated to have been aged 99 years.

One hundred and five of the deaths registered during the week occurred in hospitals and other public institutions; of this number 26 took place in the North Dublin Union Workhouse, and 29 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 26·6 per 1,000; the rate in the City was 29·6 (North City Districts, 29·9; South, 29·2), and in the Suburbs, 16·5.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 20 per 1,000 inhabitants, the rate for the City being 22 (23 in the North City Districts, and 21 in the South), and for the Suburbs, 11.

No. 1 North City District, East (Clarence-street, North).—The deaths (15) are equal to an annual rate of 26·1 per 1,000. The deaths include one from diphtheria, one from influenza, 2 from broncho-pneumonia, one from *pneumonia* (not defined), 3 from tuberculous disease, and one death from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (26) are equal to an annual rate of 34·3 per 1,000. Whooping-cough, diphtheria, and *diarrhœa* each caused one death, there were 2 deaths from influenza, 3 from broncho-pneumonia, 2 from *pneumonia* (not defined), 7 from *phthisis*, and 3 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (15) are equivalent to an annual rate of 25·7 per 1,000, and included one death from measles, one from broncho-pneumonia, 5 from tuberculous disease, and 4 deaths from diseases of the respiratory system.

No. 3 North City District (Benburb-street).—The deaths (25) represent an annual rate of 39·3 per 1,000. Measles and diphtheria each caused one death, lobar pneumonia and broncho-pneumonia each caused one death, there were 4 deaths from tuberculous disease, 4 deaths from bronchitis, and 2 deaths of infants from exposure or neglect.

Other North City Districts. The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 27·2; and Finglas and Glasnevin, part of, 13·7. The 6 deaths from all causes for Coolock and Drumcondra, part of, include one from broncho-pneumonia, and 2 from tuberculous disease; and of the 2 deaths recorded for Finglas and Glasnevin, part of, one was from influenza.

No. 1 South City District (South Earl-street).—The deaths (17) represent an annual rate of 21·6 per 1,000. Among the deaths one was from whooping-cough, one from broncho-pneumonia, 5 were from tuberculous disease, and 5 from diseases of the respiratory system.

No. 2 South City District (Castle-street).—The deaths (14) are equal to an annual rate of 33·9 per 1,000. Measles caused 2 deaths, there was one death from *pneumonia* (not defined), there were 2 deaths from *phthisis*, and 5 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (26) are equal to an annual rate of 31·7 per 1,000. Scarlet fever and whooping-cough each caused one death, there were 2 deaths from broncho-pneumonia; 8 deaths from tuberculous disease, and 6 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (26) are equivalent to an annual rate of 38·2 per 1,000, and include one death from *diarrhœa*, 6 deaths from tuberculous disease, and 6 deaths from diseases of the respiratory organs.

New Kilmainham District.—The only death recorded (equivalent to an annual rate of 5·8 per 1,000) was one caused by tuberculous *phthisis*.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 14·3; Pembroke, 20·1; Blackrock, 11·9; and Kingstown, 17·8. The deaths from the principal epidemic diseases tabulated for these districts include one from measles for Rathmines and Rathgar, and one from diphtheria for Pembroke. The 10 deaths from all causes for Rathmines and Rathgar include one from *pneumonia* (not defined), 2 from tuberculous disease, one from bronchitis, and one due to neglect; of the 11 deaths from all causes for Pembroke there was one death each from broncho-pneumonia and *phthisis*, and there were 4 deaths from bronchitis; and the 6 deaths from all causes for Kingstown include one from influenza and 2 from tuberculous *phthisis* (*phthisis*).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV, should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baile, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 6th March, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 6th March, 1909.

From this it appears that:—

Twenty-one cases of measles were admitted into hospital during the week, 15 were discharged, and 66 cases remained under treatment at its close.

Seven cases of scarlet fever were admitted to hospital, 12 were discharged, there was one death, and 30* cases remained under treatment at the close of the week.

Four cases of typhus were discharged from hospital during the week, and no case remained under treatment at its close.

Ten cases of diphtheria were admitted to hospital, 16 were discharged, there was one death, and 35 patients remained under treatment at the close of the week.

Eight cases of enteric fever were admitted to hospital during the week, 13 were discharged, and 59 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 6 cases of pneumonia were admitted to hospital, 6 were discharged, there were 2 deaths, and 32 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 22·8) was equal to an average annual death-rate of 21·3 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 20·7 per 1,000, the rate for Glasgow being 21·4 and for Edinburgh 18·4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., D.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 6th March. From this Report it appears that of a total of 72 cases notified, 27 were scarlet fever, 18 phthisis, 17 diphtheria, 8 erysipelas, one cerebro-spinal fever, and one enteric fever. Among the 388 cases of infectious diseases in hospital at the close of the week were 183 cases of scarlet fever, 59 of diphtheria, 45 of phthisis, 45 of whooping-cough, 9 of erysipelas, 7 of enteric fever, 4 of measles, 2 of chicken-pox, and 2 of cerebro-spinal fever.

See note () at foot of Table XII.

TABLE II.—**BIRTHS AND DEATHS** registered during the Week ending Saturday, 6th March, 1902, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **TEMPERATURE** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

| TOWNS AND DISTRICTS. | | Census Statistics of Districts. | | Annual Rate per 1,000 persons represented by | | DEATHS. | | BIRTHS. | | TOTAL NUMBER. | | Under 1 year of Age. | | At 60 years & upwards. | | Small-pox. | | Measles. | | Typhus. | | Whooping-cough. | | Diphtheria. | | Pyæmia & erysipelas. | | Enteric Fever. | | Diarrhoeal Diseases. | | Pneumonia. | | Phthisis. | | Tuberculous Disease. | | Other Forms. | | Cancer. | | Diseases of Hepatic System. | | Violence. | | Inquest Cases. | | No. in Public Institutions. | | Number of Deaths. | | Deaths. | | Caused by | | DEATHS. | | METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 6th March, 1909:—

"This was the coldest week of the present season in Dublin and all over Europe, and especially in Great Britain, weather of exceptional severity was experienced. The remarkably low temperature was largely due to the vast extent of land surface which was snow-covered. And, indeed, the enormous precipitation in the form of snow which took place during the week was one of its most striking features. On Sunday the barometer fell generally except in Iceland and the North of Sweden, in which regions it stood high—at from 30.30 inches to 30.48 inches. Snow or sleet and hail fell in nearly all parts of the British Isles. Monday was fine and bright in Dublin, but an atmospheric depression advancing from the northward on that day brought heavy snowfalls to Great Britain. The centre of the disturbance reached the Isle of Wight on Wednesday morning, when the barometer read 29.14 inches at Portland Bill and 29.16 inches at Dungeness. This system subsequently travelled slowly eastward to Belgium, causing a phenomenal snowstorm in the S.E. of England—the melted snow yielding 1.0 inch in the rain-gauge at Dover and 1.9 inches at Dungeness. Bexhill-on-Sea had .86 inch to 9 p.m. of Wednesday, and Nairn, in the N.E. of Scotland, had .72 inch. The frost culminated on Friday morning, when minima were reported as follow: Dungeness 12°, Bath 13°, Nottingham 14°, Wick 15°, Nairn 16°, Dover 17°, London 18°, Oxford and Clacton-on-Sea 19°, Yarmouth and Shields 21°, and Birr Castle 22°. At the last-named station the daily minima were 28°, 25°, 25°, 23°, 21°, 22° and 24°. At Nairn a minimum of 7° was recorded on Saturday. On Friday and Saturday a new and still deeper depression formed over the British Isles, the barometer sinking to 29.10 inches on Saturday morning at Scilly. In Dublin the mean atmospheric pressure was 29.534 inches, the range being from 29.9.3 inches at 9 p.m. of Sunday (wind, N.E.) to 29.142 inches at 9 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 33.5°, the mean dry bulb temperature was 32.7°. The screened thermometers rose to 42.0° on Sunday and fell to 25.8° on Thursday. The prevalent winds were N. and N.W. The rainfall was .432 inch on 3 days, .249 inch being measured on Sunday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.377 inches. The highest reading (29.774) was on Sunday at 9 p.m., wind N.E., and the lowest (28.891) on Saturday at 9 p.m., wind W.

The mean temperature for the week was 32.8°, being 8.1° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 40.6°, and was lowest on Thursday and Friday, the mercury having fallen to 21.9°. The mean of the Dry Bulb for the week was 31.5° and of the Wet Bulb 30.5°. The mean humidity of the air was .89, complete saturation being represented by 1.0. The rainfall during the week measured 0.420 inch.

At Greenwich the mean temperature for the week was 30.1°, the maximum 41.7°, and the minimum 13.6°; at Glasgow the maximum was 43.2°, the minimum 26.1°, and the mean 33.9°; and at Edinburgh the maximum was 38.8°, the minimum 21.8°, and the mean 31.1°. The rainfall at Greenwich measured 1.23 ins.; at Glasgow 0.35 in.; and at Edinburgh 0.71 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 13TH MARCH, 1909.

[No. 10.]

*General Register Office, Charlemont House,
Dublin, 15th March, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 23·9 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 14·0 | 14·0 | 37·4 | 23·3 | 22·2 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in fourteen of the districts to 4·8 in Ballymena, the 2 deaths from all causes registered in that district including one from measles. Among the 155 deaths from all causes registered in Belfast are one from measles, 3 from whooping-cough, one from diphtheria, one from diarrhoea and one from cerebro-spinal fever. Of the 38 deaths from all causes registered in Cork one is from whooping-cough. One death from typhus is included in the 7 deaths from all causes registered in Waterford. Of the 16 deaths from all causes registered in Dundalk one is from enteric fever, and of the 4 deaths from all causes registered in Newry one is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 207—109 boys and 98 girls—and the deaths to 223—97 males and 126 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 29·2 in every 1,000 of the population; omitting the deaths (numbering 13) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 27·5 per 1,000. During the ten weeks ending with Saturday last, the death-rate averaged 26·6, and was 2·0 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths from all causes which amounted to 223, include 5 from measles, one death from scarlet fever, 5 deaths from whooping-cough, 2 deaths from diphtheria, 3 deaths from enteric fever, one death from infective enteritis, and 5 from influenza. In each of the 3 weeks preceding, deaths from measles were 4, one, and 5; deaths from scarlet fever were one, 0, and one; deaths from whooping-cough were 2, 7, and 3; deaths from diphtheria were 2, 0, and 4; deaths from enteric fever were one, 3, and 0; deaths from diarrheal diseases were 0, 5, and 2; and deaths from influenza were 0, 4, and 5.

There were 12 deaths from broncho-pneumonia and 5 deaths from *pneumonia* (not defined).

Tuberculous disease (all forms) caused the deaths of 35 persons, as against 43, 27, and 51 deaths in each of the 3 preceding weeks. The 35 deaths registered during the period under notice include 20 deaths from tuberculous phthisis (*phthisis*), 2 deaths from tuberculous meningitis, and 13 deaths from other forms of the disease.

Of 6 deaths from malignant disease, 2 were attributed to carcinoma and 4 to cancer (undefined).

The deaths of 3 infants, prematurely born, were registered.

Convulsions was returned as the cause of death in 6 cases, all being infants under one year old.

Forty-five deaths were caused by diseases of the heart or blood vessels, and there were 32 deaths from bronchitis.

There were 2 deaths from accidental causes, and one death of a woman was referred to homicide.

In 11 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 6 infants under one year of age, and the deaths of 4 persons aged 60 years and upwards.

Sixty-four of the persons whose deaths were registered during the week were under 5 years of age (42 being infants under one year, of whom 9 were under one month old) and 73 were aged 60 years and upwards, including 48 persons aged 70 and upwards, of whom 7 were octogenarians, and one (a female) was stated to have been aged 91 years.

Seventy-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 18 took place in the North Dublin Union Workhouse, and 12 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 27·5 per 1,000; the rate in the City was 28·9 (North City Districts, 27·2; South, 30·6, and in the Suburbs, 22·3).

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2·2 per 1,000 inhabitants, the rate for the City being 2·7 (3·0 in the North City Districts, and 2·4 in the South), and for the Suburbs, 0·6.

No. 1 North City District, East (Clarence-street, North).—The deaths (16) are equal to an annual rate of 28·2 per 1,000, and include 2 deaths from whooping-cough, one death from diphtheria, one death from enteric fever, 2 deaths from influenza, and 3 deaths from tuberculous disease.

No. 1 North City District, West (Summer-hill).—The deaths (18) are equal to an annual rate of 23·7 per 1,000. Whooping-cough and enteric fever each caused one death, there were 3 deaths from tuberculous disease, and 8 deaths from diseases of the respiratory system.

No. 2 North City District (Lisburn-street).—The deaths (20) are equivalent to an annual rate of 34·3 per 1,000. Included in the total were 2 deaths from broncho-pneumonia, one death from measles, one death from influenza, 5 deaths from tuberculous disease, and 5 deaths from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (19) represent an annual rate of 29·8 per 1,000. Broncho-pneumonia and *pneumonia* (not defined) each caused one death, there was one death from tuberculous disease, there were 2 deaths from bronchitis and one accidental death.

Other North City Districts. The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants: Coolock and Drumecondra, part of, 22·7; and Finglas and Glasnevin, part of, 20·6. The only death recorded for Clontarf and Howth, No. 1, part of, was one from enteric fever; among the 5 deaths from all causes for Coolock and Drumecondra, part of, was one from bronchitis; and the 3 deaths from all causes for Finglas and Glasnevin, part of, include one from scarlet fever and one from broncho-pneumonia.

No. 1 South City District (South Earl-street).—The deaths (21) represent an annual rate of 26·7 per 1,000. Among the deaths there were 5 from tuberculous disease, one death from diphtheria and 6 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (11) are equal to an annual rate of 26·7 per 1,000. Whooping-cough and infective enteritis each caused one death; *pneumonia* (not defined) and *phthisis*, each caused one death, and bronchitis caused 3 deaths.

No. 3 South City District (Peter-street).—The deaths (31) are equal to an annual rate of 37·8 per 1,000, and include 3 deaths from measles, one death from whooping-cough, 5 deaths from broncho-pneumonia, 3 deaths from *pneumonia* (not defined), 2 deaths from tuberculous disease and 5 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (20) are equivalent to an annual rate of 29·4 per 1,000. Of the total, one death was caused by broncho-pneumonia, 2 by *phthisis*, and 2 deaths by bronchitis.

New Kilnamanham District. The deaths (5) are equal to an annual rate of 29·0 per 1,000. Of the deaths one was from broncho-pneumonia.

Urban Districts. The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 21·4; Pembroke, 22·0; Blackrock, 17·9; and Kingstown, 29·6. The only death from any of the principal epidemic diseases tabulated for these districts was one from measles for Rathmines and Rathgar. The 15 deaths from all causes for the last-named district include one death from influenza, 4 deaths from tuberculous disease, and one death from bronchitis; of the 12 deaths from all causes for Pembroke one was from broncho-pneumonia, 2 were from tuberculous *phthisis* and one from bronchitis; and the 10 deaths from all causes for Kingstown include 2 from tuberculous disease and one accidental death.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV, should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Balie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 13th March, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 13th March, 1909.

From this it appears that:—

Twenty-five cases of measles were admitted into hospital during the week, 18 were discharged, and 73 cases remained under treatment at its close.

Fourteen cases of scarlet fever were admitted to hospital, 2 were discharged, and 42* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Seven cases of diphtheria were admitted to hospital, 8 were discharged, there were 2 deaths, and 32 patients remained under treatment at the close of the week.

Three cases of enteric fever were admitted to hospital during the week, 19 were discharged, there were 2 deaths, and 41 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 14 cases of pneumonia were admitted to hospital, 2 were discharged, there was one death, and 43 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 24.0) was equal to an average annual death-rate of 22.1 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 21.6 per 1,000, the rate for Glasgow being 21.9 and for Edinburgh 20.4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 13th March. From this Report it appears that of a total of 39 cases notified, 14 were phthisis, 12 scarlet fever, 6 diphtheria, 6 erysipelas, and one puerperal fever. Among the 380 cases of infectious diseases in hospital at the close of the week were 171 cases of scarlet fever, 52 of whooping-cough, 51 of diphtheria, 47 of phthisis, 13 of erysipelas, 4 of measles, 3 of enteric fever, 3 of chicken-pox, and 2 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the Week ending Saturday, 13th March, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths: also the **TEMPERATURE** and **RAINFALL** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 13th March, 1909:—

"Although much less cold than the previous week, this period was—like it—of a winterly and inclement character. Polar winds prevailed throughout, and cold showers of rain and hail occurred frequently. In the course of Sunday and Monday a deep atmospheric depression, in the centre of which the barometer had fallen slightly below 29 inches (to 28.98 inches at Portland Bill) on the evening of Saturday, March 6, moved slowly along an erratic path across the British Isles. At first it travelled northwards to North Wales; thence, still more slowly, westwards and finally along a southerly path down St. George's Channel to the Land's End, off which it was still found, partially filled up, on Tuesday morning. All this time, rain, sleet, and hail were falling at intervals in nearly all places. Meanwhile an area of high pressure was spreading southwards over the British Isles, so that gradients for N.E. winds became steeper, causing a continuance of cold, raw, and showery weather. On Thursday a brisk fall of the barometer began in Norway, and this caused the wind to back to N. and finally to N.W. over North-western Europe, the thermometer at the same time showing a decided tendency to rise as the wind came more and more off the Ocean—on Friday, 47° in the screen was reached in Dublin—the highest temperature recorded since February 23. Saturday was changeable and at times showery, but tolerably mild, the thermometer rising to 48°. In Dublin the mean height of the barometer was 29.791 inches, pressure ranging from 29.096 inches at 7 a.m. on Sunday (wind, W.N.W.) to 30.195 inches at 9 a.m. of Friday (wind, N.). The corrected mean temperature was 39.3°, which was also the mean dry bulb reading at 9 a.m. and 9 p.m. The screened thermometers fell to 30.1° on Sunday and rose to 48.0° on Saturday. The prevalent winds were N.E. and N.N.W. Rain fell on 6 days to the amount of .433 inch, .274 inch being measured on Tuesday."

Erratum.—The mean temperature for the week ended Saturday, March 6, was 34.0°—not 33.5°, as stated.

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·636 inches. The highest reading (30·029) was on Friday at 9 a.m., wind N., and the lowest (28·959) on Sunday at 9 a.m., wind W.S.W.

The mean temperature for the week was 38·2°, being 3·3° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 48·5°, and was lowest on Sunday, the mercury having fallen to 27·7°. The mean of the Dry Bulb for the week was 38·6° and of the Wet Bulb 37·2°. The mean humidity of the air was ·89, complete saturation being represented by 1·0. The rainfall during the week measured 0·597 inch.

At Greenwich the mean temperature for the week was 36·5°, the maximum 49·2°, and the minimum 30·2°; at Glasgow the maximum was 49·0°, the minimum 32·0°, and the mean 37·7°; and at Edinburgh the maximum was 44·8°, the minimum 29·7°, and the mean 35·4°. The rainfall at Greenwich measured 0·46 in.; at Glasgow 0·51 in.; and at Edinburgh 0·65 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 20TH MARCH, 1909.

[No. 11.]

*General Register Office, Charlemont House,
Dublin, 22nd March, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 26·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality:

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 14·0 | 37·4 | 23·3 | 28·0 | 25·7 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in fifteen of the districts to 9·6 in Ballymena, the 8 deaths from all causes registered in that district including 2 from measles. Among the 156 deaths from all causes registered in Belfast are 4 from whooping-cough, 3 from diarrhoeal diseases, and one from cerebro-spinal fever. Included in the 46 deaths from all causes in Cork are 2 from whooping-cough and one from enteric fever. Of the 13 deaths from all causes registered in Limerick one is from enteric fever, and included in the 17 deaths from all causes registered in Waterford are one from typhus and one from diarrhoea.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 194—99 boys and 95 girls—and the deaths to 232—123 males and 109 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 30·4 in every 1,000 of the population; omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, the rate was 29·3 per 1,000. During the eleven weeks ending

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-15 of Table II.

with Saturday last, the death-rate averaged 26·9, and was 1·5 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths, amounting to a total of 232, include 5 deaths from measles, 4 from whooping-cough, one death from diphtheria, 3 deaths from enteric fever, one death from epidemic diarrhoea, and 5 deaths from influenza. In each of the 3 preceding weeks, deaths from measles were one, 5, and 5; deaths from whooping-cough were 7, 3, and 5; deaths from diphtheria were 0, 4, and 2; deaths from enteric fever were 3, 0, and 3; deaths from diarrhoeal diseases were 5, 2, and one; and deaths from influenza were 4, 5, and 5.

Of 26 deaths from pneumonia (all forms), 3 were from lobar pneumonia, 13 were from broncho-pneumonia, and 10 deaths were attributed to *pneumonia* (not defined).

Deaths from all forms of tuberculous disease, which were 27, 51, and 35 in each of the preceding weeks numbered 46 in the period under notice; the latter figure includes 35 deaths from tuberculous phthisis (*phthisis*), 2 deaths from tuberculous meningitis, 3 deaths from tuberculous peritonitis, 2 deaths from *tubes mesenterica*, and 4 deaths from other forms of the disease.

There were 4 deaths from carcinoma, one death from sarcoma, and 6 deaths were attributed to cancer, or malignant disease (undefined).

Premature birth was the cause of the death of one infant under one month of age.

Four deaths were caused by *convulsions*; all were under 5 years of age, 2 being infants under one year of age.

Diseases of the heart or blood vessels accounted for 26 deaths, and the deaths from bronchitis amounted to 43.

Three deaths were classified to accidental causes, and one death of a man was by suicide.

In no instance was the cause of death "uncertified."

Sixty-two of the persons whose deaths were registered during the week were under 15 years of age (30 being infants under one year, of whom 5 were under one month old and 75 were aged 60 years and upwards, including 39 persons aged 70 and upwards, of whom 13 were octogenarians, and 2 (a male and a female) were stated to have been each aged 92 years).

Ninety-one of the deaths registered during the week occurred in hospitals and other public institutions; of this number 17 took place in the North Dublin Union Workhouse and 24 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week: deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 29·3 per 1,000; the rate in the City was 32 (North City Districts, 36·8; South, 27·9, and in the Suburbs, 18·8).

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 17 per 1,000 inhabitants, the rate for the City being 19 (17 in the North City Districts, and 21 in the South), and for the Suburbs, 11.

No. 1 North City District, East (Clarence-street, North).—The deaths (27) are equal to an annual rate of 47·6 per 1,000. Included in the total there were 3 deaths from influenza, one death from whooping-cough, 2 deaths from broncho-pneumonia, 2 deaths from *pneumonia* (not defined), 5 deaths from tuberculous disease, and 3 deaths from diseases of the respiratory system.

No. 1 North City District, West (Summer-hill).—The deaths (26) are equal to an annual rate of 34·3 per 1,000. There were 2 deaths from broncho-pneumonia, one death from influenza, 8 deaths from tuberculous disease, and 6 deaths from diseases of the respiratory system.

No. 2 North City District (Lisburn-street).—The deaths (21) are equivalent to an annual rate of 36·0 per 1,000. Measles, enteric fever, and influenza each caused one death, there were 5 deaths from tuberculous disease and 2 deaths from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (29) represent an annual rate of 45·6 per 1,000, and include one death from whooping-cough, 6 deaths from pneumonia (all forms), 10 deaths from tuberculous disease, and 3 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants: Coolock and Drumcondra, part of, 18·1; and Finglas and Glasnevin, part of, 20·6. The only death recorded for Clontarf and Howth, No. 1, part of, was one from *phthisis*; and of the deaths from all causes for Coolock and Drumcondra, part of, there was one death from whooping-cough.

No. 1 South City District (South Earl-street).—The deaths (22) represent an annual rate of 28·0 per 1,000. Among the deaths were 2 from measles, one from enteric fever, 2 from *pneumonia* (not defined), 4 from tuberculous disease, and 5 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·8 per 1,000, and include one death from tuberculous phthisis, and 4 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (28) are equal to an annual rate of 34·1 per 1,000. Measles caused one death, broncho-pneumonia and *pneumonia* (not defined) each caused one death, there were 5 deaths from tuberculous disease, 11 deaths from diseases of the respiratory system, and one death from accidental burning.

No. 4 South City District (Grand Canal-street).—The deaths (19) are equivalent to an annual rate of 27·9 per 1,000. Enteric fever and epidemic diarrhoea each caused one death, there were 3 deaths from broncho-pneumonia, 8 deaths from bronchitis, and one accidental death.

New Kibbiniham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000. Of the 2 deaths one was caused by bronchitis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 17·1; Pembroke, 22·0; Blackrock, 0·0; and Kingstown, 26·6. The deaths from the principal epidemic diseases tabulated for these districts include one from measles for Pembroke, and one death from whooping-cough for Kingstown. Among the 12 deaths from all causes for Rathmines and Rathgar are 2 from *pneumonia* (not defined), and one from tuberculous phthisis; the 12 deaths from all causes for Pembroke include one each from broncho-pneumonia, an *pneumonia* (not defined), 4 from tuberculous disease, and 3 from bronchitis; and the 9 deaths from all causes for Kingstown include 2 deaths from lobar pneumonia, one accidental death, and one suicide.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV, should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 20th March, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 20th March, 1909.

From this it appears that:—

Thirty-six cases of measles were admitted into hospital during the week, 28 were discharged, there were 4 deaths, and 77 cases remained under treatment at its close.

Seven cases of scarlet fever were admitted to hospital, 11 were discharged, and 38* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Fourteen cases of diphtheria were admitted to hospital, 8 were discharged, there was one death, and 37 patients remained under treatment at the close of the week.

Eleven cases of enteric fever were admitted to hospital during the week, 6 were discharged, there was one death, and 45 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 9 cases of pneumonia were admitted to hospital, 16 were discharged, there were 2 deaths, and 34 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 24.0) was equal to an average annual death-rate of 22.1 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 21.1 per 1,000, the rate for Glasgow being 21.9 and for Edinburgh 17.2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 20th March. From this Report it appears that of a total of 60 cases notified, 25 were scarlet fever, 22 diphtheria, 4 erysipelas, and one cerebro-spinal fever. Among the 363 cases of infectious diseases in hospital at the close of the week were 166 cases of scarlet fever, 68 of whooping-cough, 49 of phthisis, 43 of diphtheria, 12 of erysipelas, 6 of measles, 4 of chicken-pox, 3 of cerebro-spinal fever, and 2 of enteric fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 20th March, 1903, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 20th March, 1909:—

"The weather of this week presented two very diverse types. Until Wednesday the polar type prevailed: from that day onward to the close, the equatorial type held sway. During the first period an atmospheric depression of no great intensity occupied the North Sea region, so that keen northerly winds passed over the British Isles. They were accompanied by frequent showers of hail and sleet or snow by day, and sharp frosts by night. Also, vivid flashes of lightning were reported from the shores of the Irish Sea and St. George's Channel on the nights of Sunday and Monday. In Dublin there was a heavy hail shower at 5 p.m. of Monday and lightning was seen to the eastward at intervals between dusk and midnight. On Tuesday evening sleet and snow fell in this City and a sharp frost followed. On Wednesday cirrus cloud streamed up across the sky from N.W., while the wind became S.W. in Ireland and temperature rose briskly. These changes were brought about by the approach to our S.W. coasts of a large and deep atmospheric depression, in which the barometer fell to 28.61 inches at Valentia, Co. Kerry, at 7 a.m. of Thursday. Even lower pressures existed out on the Atlantic, for the SS. 'Kaiser Wilhelm der Grosse' reported (by wireless telegram) the reading of 28.47 inches at 6 p.m. of Thursday in long. 49° N., lat. 14° W. This disturbance caused heavy rains and S.E. or S. gales in Ireland. But the system soon began to fill up in part and at the same time to retreat to the north-westward, the weather meanwhile moderating and improving—especially on Saturday. At 11 a.m. of this day a solar halo appeared, and at 9 p.m. an aurora borealis was observed. In Dublin the mean height of the barometer was 29.357 inches, the range being from 29.655 inches at 9 a.m. of Sunday (wind, N.) to 28.879 inches at 3 p.m. of Thursday (wind, S.). The corrected mean temperature was 49.8°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 39.8°. The screened thermometers fell to 29.1° on Tuesday and again on Wednesday—they rose to 52.9° on Thursday. The prevalent winds were at first N.N.W.; afterwards S.S.E. Rain fell on 5 days to the amount of .627 inch, of which .400 inch was measured on Thursday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.197 inches. The highest reading (29.495) was on Sunday at 9 a.m., wind N.W., and the lowest (28.787) on Thursday at 9 p.m., wind S.E.

The mean temperature for the week was 39.6°, being 3.8° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Thursday, on which day the thermometer registered 53.7°, and was lowest on Wednesday, the mercury having fallen to 21.9°. The mean of the Dry Bulb for the week was 39.0° and of the Wet Bulb 37.8°. The mean humidity of the air was .90, complete saturation being represented by 1.0. The rainfall during the week measured 0.340 inch.

At Greenwich the mean temperature for the week was 38.8°, the maximum 57.0°, and the minimum 23.1°; at Glasgow the maximum was 51.0°, the minimum 29.9°, and the mean 39.8°; and at Edinburgh the maximum was 47.6°, the minimum 26.9°, and the mean 36.5°. The rainfall at Greenwich measured 0.41 in.; at Glasgow 0.20 in.; and at Edinburgh 0.08 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

VOL. XLVI.]

WEEK ENDING SATURDAY, 27TH MARCH, 1909.

[No. 12.

General Register Office, Charlemont House,
Dublin, 29th March, 1909.

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 25·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality:

| TOWNS, &c. | Week ending . | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·1 per 1,000, the rates varying from 0·0 in eighteen of the districts to 4·9 in Kilkenny, the 7 deaths from all causes registered in that district including one from diarrhoea. Among the 198 deaths from all causes registered in Belfast are 5 from whooping-cough, one from diphtheria, 4 from diarrhoeal diseases, and one from cerebro-spinal fever, and included in the 40 deaths from all causes registered in Cork are one from whooping-cough and 2 from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 238—104 boys and 134 girls—and the deaths to 216—105 males and 111 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 28·3 in every 1,000 of the population; omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, the rate was 27·2 per 1,000. During the twelve weeks ending

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

with Saturday last, the death-rate averaged 27·1, and was 1·3 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths from all causes, include 6 deaths from measles, 2 from whooping-cough, one death from each of diphtheria, enteric fever, and epidemic enteritis, and 4 deaths from influenza. In each of the 3 preceding weeks, deaths from measles were 5, 5, and 5; deaths from whooping-cough were 3, 5, and 4; deaths from diphtheria were 4, 2, and one; deaths from enteric fever were 0, 3, and 3; deaths from diarrhoeal diseases were 2, one, and one; and deaths from influenza were 5, 5, and 5.

There were 5 deaths from lobar pneumonia, 9 from broncho-pneumonia, and 11 deaths returned as from *pneumonia* (not defined).

Deaths from all forms of tuberculous disease, which had numbered 51, 35, and 46 in each of the 3 weeks preceding declined to 29 in the period under notice; the latter total includes 22 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, one death from *tubae mesentericae*, and 3 deaths from other forms of the disease.

Of 9 deaths from malignant disease 2 were attributed to carcinoma, one to sarcoma, and 6 to cancer, or malignant disease (undefined).

The death of one infant, prematurely born, was registered.

Diseases of the brain and nervous system caused the deaths of 8 persons, including 3 deaths from *convulsions*, 2 of the latter being deaths of infants under one month old.

The deaths of 41 persons were attributed to diseases of the heart or blood vessels, and deaths from bronchitis amounted to 44.

Accidental circumstances were the causes of 2 deaths, both of which were registered on the Coroner's certificates.

In 7 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 3 children under 5 years of age (including 2 infants under one year old), and the deaths of 3 persons aged 60 years and upwards.

Fifty-three of the persons whose deaths were registered during the week were under 5 years of age (33 being infants under one year, of whom 9 were under one month old) and 75 were aged 60 years and upwards, including 35 persons aged 70 and upwards, of whom 6 were octogenarians, and one (a female) was stated to have been aged 95 years.

Ninety-seven of the deaths registered during the week occurred in hospitals and other public institutions; of this number 20 took place in the North Dublin Union Workhouse, 28 in the South Dublin Union Workhouse, and 3 in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 27·2 per 1,000; the rate in the City was 30·1 (North City Districts, 25·2; South, 35·2), and in the Suburbs, 17·7.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·3 per 1,000 inhabitants, the rate for the City being 1·7 (1·0 in the North City Districts, and 2·4 in the South), and for the Suburbs, 0·0.

No. 1 North City District, East (Clarence-street, North).—The deaths (16) are equal to an annual rate of 28·2 per 1,000. Whooping-cough and influenza each caused one death, there were 2 deaths from broncho-pneumonia, one death from *pneumonia* (not defined), one death from tuberculous phthisis and one death from bronchitis.

No. 1 North City District West (Summer-hill).—The deaths (21) are equal to an annual rate of 27·7 per 1,000. There was one death from *pneumonia* (not defined); tuberculous phthisis (*phthisis*) caused 4 deaths, and diseases of the respiratory system, 7 deaths.

No. 2 North City District (Lisburn-street).—The deaths (14) are equivalent to an annual rate of 24·0 per 1,000, and include 2 deaths from measles and 2 deaths from *phthisis*.

No. 3 North City District (Benburb-street).—The deaths (13) represent an annual rate of 20·4 per 1,000. There were 3 deaths from *pneumonia* (not defined), one death from broncho-pneumonia, 4 deaths from bronchitis and one accidental death.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumecondra, part of, 22·7; and Finglas and Glasnevin part of, 34·3. Among the 2 deaths recorded for Clontarf and Howth, No. 1, part of, was one from bronchitis; the 5 deaths from all causes for Coolock and Drumecondra, No. 1, part of, include one death each from influenza and bronchitis; and of 5 deaths from all causes for Finglas and Glasnevin, part of, one was from tuberculous phthisis and 4 were from diseases of the heart or blood vessels.

No. 1 South City District (South Earl-street).—The deaths (22) represent an annual rate of 28·0 per 1,000. Measles caused 3 deaths, there was one death from whooping-cough, there were 2 deaths from lobar pneumonia, and one death from *pneumonia* (not defined), 3 deaths from tuberculous disease, and 5 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (23) are equal to an annual rate of 55·7 per 1,000. Among the deaths were one from diphtheria, 2 from broncho-pneumonia, 4 from tuberculous disease, and 7 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (30) are equal to an annual rate of 36·6 per 1,000, and include one death from lobar pneumonia, 3 deaths from *pneumonia* (not defined), 4 deaths from tuberculous disease, and 8 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (21) are equivalent to an annual rate of 30·9 per 1,000. Enteric fever, epidemic diarrhoea, and influenza each caused one death, lobar pneumonia and *pneumonia* (not defined) each caused one death, there were 3 deaths from *phthisis*, 5 deaths from bronchitis, and one accidental death.

New Kilmainham District.—The deaths (5) are equal to an annual rate of 29·0 per 1,000. Three of the deaths registered were from diseases of the heart or blood vessels.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 18·5; Pembroke, 20·1; Blackrock, 11·9; and Kingstown, 14·8. There were no deaths from any of the principal epidemic diseases tabulated for these districts. Among the 13 deaths from all causes for Rathmines and Rathgar are 2 from broncho-pneumonia, one from *phthisis*, and 2 from bronchitis; the 11 deaths from all causes for Pembroke include one each from influenza and broncho-pneumonia, 2 from tuberculous disease, and 2 from bronchitis; of the 2 deaths recorded for Blackrock one was caused by tuberculous meningitis; and of 5 deaths from all causes for Kingstown one was from *pneumonia* (not defined), and 2 were from tuberculous disease.

* See Columns 10-13 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 27th March, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 27th March, 1909.

From this it appears that:—

Twenty-seven cases of measles were admitted into hospital during the week, 22 were discharged, there were 3 deaths, and 79 cases remained under treatment at its close.

Six cases of scarlet fever were admitted to hospital, 8 were discharged, and 36* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Six cases of diphtheria were admitted to hospital, 8 were discharged, and 35 patients remained under treatment at the close of the week.

Seven cases of enteric fever were admitted to hospital during the week, 14 were discharged, there were 2 deaths, and 36 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 7 cases of pneumonia were admitted to hospital, 11 were discharged, there were 3 deaths, and 27 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 21.5) was equal to an average annual death-rate of 19.8 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 20.5 per 1,000, the rate for Glasgow being 22.3 and for Edinburgh 17.2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 27th March. From this Report it appears that of a total of 63 cases notified, 23 were phthisis, 19 scarlet fever, 12 diphtheria, 7 erysipelas, one puerperal fever, and one cerebro-spinal fever. Among the 359 cases of infectious diseases in hospital at the close of the week were 149 cases of scarlet fever, 61 of whooping-cough, 47 of phthisis, 42 of diphtheria, 15 of measles, 10 of erysipelas, 5 of cerebro-spinal fever, one of enteric fever, one of puerperal fever, and one of chicken-pox.

* See note (*) at foot of Table XII.

CABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 27th March, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

the Registration Area as then constituted.
*Simple Continued Fever."

REGISTRATION OF DEATHS. WEEK ENDING SATURDAY, 27TH MARCH, 1909.

CAUSES OF DEATH.

AGES.

Total Number of Deaths.

Annual Death Rate per 1,000 of the Population in 1901.

Population in each Class Group in 1901.

OCCUPATION OR SOCIAL POSITION.

[The 26,600 persons returned under the head "Unspecified" in Table 94 of the General Report on the Census have been distributed pro rata among the several groups to which they most probably belonged.]

CLASS.

COLA.

Under 5 Years.

5 and under 10.

10 and under 20.

20 and under 40.

40 and under 60.

60 and under 80.

80 and upwards.

Small-pox.

Measles.

Scarlet Fever.

Typhus.

Whooping-cough.

Diphtheria.

Pyæmia* (origin uncertain).

Enteric Fever.

Diarrhoeal Diseases.

Total Colic, 10-18.

Pneumonia.

Phthisis.

Other Forms.

Cancer, Malignant Disease.

Convulsions.

Diseases of the Respiratory System (exclusive of Pneumonia).

Violence (Accidental, Homicidal and Suicidal).

Other Causes.

Number of Uncertified Deaths.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 27th March, 1909:—

"Atmospheric pressure ruled low over North-Western Europe during this week. In the earlier part baric gradients were for the most part slight and consequently the weather, though changeable, was neither stormy nor very wet. On Sunday morning a depression, in the centre of which the barometer was below 29·2 inches, was located by means of wireless telegrams in lat. 51° N., long. 11° W. The system was already filling up as it spread eastward and so no bad weather attended it. In Dublin, indeed, the first three days were very fine—the nights cold, the days mild; there was a vapour fog on Tuesday morning. On the afternoon of that day the wind shifted to S.E. and the barometer began to fall as a new and much deeper atmospheric depression appeared off the N.W. of Ireland. A fresh S. wind prevailed at midnight, and Wednesday forenoon proved very wet. By 4 p.m. of the same day the barometer had fallen to 29·155 inches in Dublin, while the wind had veered to S.W. with a clearing sky and higher temperature—the maximum being 55·3°. The depression travelled eastwards, growing deeper meanwhile so that on Thursday at 7 a.m. the barometer was down to 28·9 inches at Spurn Head. Rain fell heavily, especially north of the cyclonic track, 1·02 inches being measured at Leith. The N. winds of the system brought dry cool weather to Ireland; but on Saturday morning cirrus cloud and a solar halo heralded the approach of another disturbance from the Atlantic, and at 3 p.m. the weather broke with a heavy downpour of rain and hail and distant thunder. The week closed with cold, rainy weather. In Dublin the mean height of the barometer was 29·582 inches, pressure ranging from 29·821 inches at 4 p.m. of Tuesday (wind, S.E.) to 29·152 inches at 9 a.m. of Thursday (wind, W.N.W.). The corrected mean temperature was 44·8°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 44·1°. On Monday the screened thermometers fell to 33·1°; on Wednesday they rose to 55·3°. The prevailing winds were E. and N.W. The rainfall amounted to ·688 inch, of which ·242 inch was recorded on Wednesday and ·417 inch on Saturday. There were 3 rain-days."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.433 inches. The highest reading (29.661) was on Friday at 9 p.m., air calm, and the lowest (29.011) on Thursday at 9 a.m., wind W.

The mean temperature for the week was 43.5°, being 2.4° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Wednesday, on which day the thermometer registered 55.2°, and was lowest on Monday, the mercury having fallen to 25.6°. The mean of the Dry Bulb for the week was 42.8° and of the Wet Bulb 41.3°. The mean humidity of the air was .90, complete saturation being represented by 1.0. The rainfall during the week measured 0.922 inch.

At Greenwich the mean temperature for the week was 44.8°, the maximum 54.0°, and the minimum 32.1°; at Glasgow the maximum was 53.0°, the minimum 31.0°, and the mean 42.2°; and at Edinburgh the maximum was 48.6°, the minimum 33.4°, and the mean 40.0°. The rainfall at Greenwich measured 0.51 in.; at Glasgow 0.68 in.; and at Edinburgh 1.34 ins.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 3RD APRIL, 1909.

[No. 13.]

*General Register Office, Charlemont House,
Dublin, 5th April, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 24·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality:

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Kilkenny, . . . | 24·6 | 29·5 | 34·3 | 24·6 | 28·2 | Waterford, . . . | 13·6 | 33·1 | 21·4 | 15·6 | 20·9 |
| | | | | | | Wexford, . . . | 23·3 | 28·0 | 14·0 | 14·0 | 19·8 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 2·0 per 1,000, the rates varying from 0·0 in sixteen of the districts to 5·5 in Cork, the 52 deaths from all causes registered in that district including one from scarlet fever, one from typhus, 5 from whooping-cough, and one from diphtheria. Among the 160 deaths from all causes registered in Belfast are one from measles, one from scarlet fever, 4 from whooping-cough, one from enteric fever, and 5 from diarrhoeal diseases; and included in the 8 deaths from all causes in Galway is one from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 250—126 boys and 124 girls—and the deaths to 204—87 males and 117 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 26·7 in every 1,000 of the population; omitting the deaths (numbering 6) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 25·9 per 1,000. During the thirteen weeks ending with Saturday last, the death-rate averaged 27·0, and was 1·5 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the deaths there were 9 from measles, 6 from whooping-cough, 4 from diphtheria, 2 from diarrhoea, 2 from influenza, and one death from tetanus. In each of the 3 preceding weeks, deaths from measles were 5, 5, and 6; deaths from whooping-cough were 5, 4, and 2; deaths from diphtheria were 2, one, and one; deaths from diarrhoeal diseases were one, one, and one; and deaths from influenza were 5, 5, and 4.

There were 2 deaths from lobar pneumonia, 8 from broncho-pneumonia, and 6 from pneumonia (not defined).

The 43 deaths from tuberculous disease (all forms) include 29 deaths from tuberculous phthisis (*phthisis*), 2 deaths from tuberculous meningitis, and 12 deaths from other forms of the disease. In the 3 preceding weeks deaths from all forms of tuberculous disease numbered 35, 46, and 29, respectively.

Carcinoma caused 3 deaths, and there was one death from cancer (undefined).

The deaths of four infants, prematurely born, were registered.

Of 12 deaths from diseases of the brain and nervous system, there were 3 from convulsions of infants under one year of age and one child aged 3 years.

Diseases of the heart or blood vessels caused 32 deaths, and there were 23 deaths from bronchitis.

Of 3 deaths attributed to accidental causes, one was by suffocation in bed of an infant under one year of age, and one took place when under the influence of chloroform administered for anæsthetic purposes.

In 5 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the death of one infant under one year of age, and the deaths of 2 persons aged 60 years and upwards.

Sixty-three of the persons whose deaths were registered during the week were under 5 years of age (36 being infants under one year, of whom 7 were under one month old) and 59 were aged 60 years and upwards, including 30 persons aged 70 and upwards, of whom 8 were octogenarians, and 2 (a male and a female) were stated to have been each aged 90 years.

Eighty-four of the deaths registered during the week occurred in hospitals and other public institutions; of this number 16 took place in the North Dublin Union Workhouse and 22 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 25·9 per 1,000; the rate in the City was 28·9 (North City Districts, 27·9; South, 29·9), and in the Suburbs, 16·0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2·6 per 1,000 inhabitants, the rate for the City being 2·9 (1·7 in the North City Districts, and 4·2 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (17) are equal to an annual rate of 30·0 per 1,000. Whooping-cough, diphtheria, and influenza each caused one death, there was one death from broncho-pneumonia, and there were 2 deaths from tuberculous phthisis (*phthisis*).

No. 1 North City District West (Summer-hill).—The deaths (19) are equal to an annual rate of 25·1 per 1,000. Measles and whooping-cough each caused one death, there were 2 deaths from broncho-pneumonia, 4 deaths from tuberculous disease, and 4 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (15) are equivalent to an annual rate of 25·7 per 1,000, and included one death from measles, one death from broncho-pneumonia, 7 deaths from tuberculous disease, one death from bronchitis, and one accidental death.

No. 3 North City District (Benburb-street).—The deaths (29) represent an annual rate of 45·6 per 1,000. There were 3 deaths from pneumonia (all forms), one death from influenza, 7 deaths from tuberculous disease, and 2 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 4·5 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 20·6. Of the 3 deaths from all causes for Finglas and Glasnevin, part of, one was caused by broncho-pneumonia, one by pneumonia (not defined), and one by tuberculous disease.

No. 1 South City District (South Earl-street).—The deaths (23) represent an annual rate of 29·2 per 1,000. The deaths include 2 from measles, one from diphtheria, one from pneumonia (not defined), 4 from tuberculous disease, and 4 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (14) are equal to an annual rate of 33·9 per 1,000. There were 4 deaths from tuberculous disease, and 3 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (30) are equal to an annual rate of 36·6 per 1,000. Measles and whooping-cough each caused 3 deaths, there was one death from diphtheria, there were 2 deaths from diarrhoea, 4 deaths from tuberculous phthisis (*phthisis*), and 6 deaths from diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (13) are equivalent to an annual rate of 19·1 per 1,000, and include 2 deaths from pneumonia (not defined), 5 deaths from tuberculous phthisis, and one death from bronchitis.

New Kilmainham District.—The deaths (6) are equal to an annual rate of 31·8 per 1,000. Of the deaths one was from bronchitis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 11·4; Pembroke, 25·6; Blackrock, 6·0; and Kingstown, 14·8. The deaths from the principal epidemic diseases tabulated for these districts include one each from measles, whooping-cough, and diphtheria for Pembroke. Among the 8 deaths from all causes for Rathmines and Rathgar are one from broncho-pneumonia, and 2 from diseases of the respiratory system; of the 14 deaths from all causes for Pembroke there was one death each from lobar-pneumonia and broncho-pneumonia, and there were 2 deaths from tuberculous disease; and the 5 deaths from all causes for Kingstown include one from pneumonia (not defined), one from phthisis, and one from accidental burns.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV, should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 3rd April, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 3rd April, 1909.

From this it appears that:—

Thirteen cases of measles were admitted into hospital during the week, 24 were discharged, there were 3 deaths, and 65 cases remained under treatment at its close.

Fifteen cases of scarlet fever were admitted to hospital, 7 were discharged, and 44* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week:

Eleven cases of diphtheria were admitted to hospital, 8 were discharged, there were 3 deaths, and 35 patients remained under treatment at the close of the week.

Nine cases of enteric fever were admitted to hospital during the week, 8 were discharged, and 37 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 15 cases of pneumonia were admitted to hospital 6 were discharged, there were 2 deaths, and 34 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 18.3) was equal to an average annual death-rate of 17.9 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 19.9 per 1,000, the rate for Glasgow being 21.5 and for Edinburgh 18.4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 3rd April. From this Report it appears that of a total of 57 cases notified, 29 were scarlet fever, 14 phthisis, 9 diphtheria, 3 erysipelas, one small-pox, one puerperal fever, and one cerebro-spinal fever. Among the 360 cases of infectious diseases in hospital at the close of the week were 159 cases of scarlet fever, 62 of whooping-cough, 43 of phthisis, 39 of diphtheria, 16 of measles, 10 of erysipelas, 5 of chicken-pox, 4 of cerebro-spinal fever, 2 of puerperal fever, and one of small-pox.

* See note (e) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 3rd April, 1903, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Illegitimate Deaths; also the **Temperature and Rainfall** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Region, that estimated to the middle of 1909. (b) Formerly described as "Simple continued Fever."

(b) Formerly described as "Simple Continued Fever."

(c) Exclusive of 6 deaths of persons (including 3 children) who died of diphtheria and pneumonia, the 100 deaths of persons (including 1 child) who died of pneumonia.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 3rd April, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

* Exclusive of 11 patients in "Beneavin," the Convalescent Home of Cork-street Fever Hospital.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 3rd April, 1909:—

"Of this week it might be said that 'Winter still lingered in the lap of Spring.' There were frequent heavy falls of cold rain and day after day a thick cloud canopy shut out the sunshine by day and the moonlight by night. On Sunday morning wireless telegrams from steamships out in the Atlantic located a depression, which was spreading eastward over the British Isles, as central in Lat. 50° N., Long. 17° W., the barometer in that neighbourhood being under 29.1 inches at 7 a.m. By 5.30 p.m. the centre of the disturbance passed over Dublin, the barometer falling to 29.076 inches and the wind shifting from E.S.E. to N.W. Rain fell heavily at intervals. On Monday a second centre of low pressure moved in over Ireland from the Atlantic, so that by 4 p.m. the low reading of 28.938 inches was recorded in Dublin. Tuesday was overcast and dull, although finer and drier throughout; but on Wednesday the weather again broke, rain falling very heavily in Dublin at 1 p.m. The wind, which had been westerly on Tuesday, once more shifted to E., and finally to N.E. as a new depression arrived from the Atlantic. This system passed swiftly eastwards, reaching Holland on Thursday morning. In its wake the barometer rose with extreme rapidity, so that at 7 a.m. of Friday a ridge of high pressure (30.5 inches) stretched across Great Britain from the Orkneys to Bristol. A sharp frost occurred within this anticyclonic area. Meanwhile another Atlantic depression began to spread in over Ireland with the result that a bitterly cold S.S.E. wind prevailed on Friday, followed by a steady downpour of rain in Dublin from 4 p.m. of that day, .67 inch falling in the ensuing 24 hours. The wind rose to a fresh gale from S. in the course of Friday night. In Dublin the mean height of the barometer was 29.671 inches, the range of pressure being from 28.938 inches at 4 p.m. of Monday (wind, E.) to 30.392 inches at 9 a.m. of Friday (wind, S.E.). The corrected mean temperature was 44.6°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 44.7°. The screened thermometers rose to 52.3° on Sunday and again on Monday and fell to 38.0° on Friday. The dominant wind was S.E. Rain fell on 6 days to the amount of 2.720 inches, the measurement on Saturday being as much as 1.581 inches."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·523 inches. The highest reading (30·243) was on Friday at 9 a.m., wind S.E., and the lowest (28·830) on Monday at 9 a.m., wind N.E.

The mean temperature for the week was 43·8°, being 0·9° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Monday, on which day the thermometer registered 52·5°, and was lowest on Friday, the mercury having fallen to 36·8°. The mean of the Dry Bulb for the week was 43·8° and of the Wet Bulb 42·4°. The mean humidity of the air was ·90, complete saturation being represented by 1·0. The rainfall during the week measured 2·326 inches.

At Greenwich the mean temperature for the week was 44·7°, the maximum 62·1°, and the minimum 29·0°; at Glasgow the maximum was 48·6°, the minimum 30·0°, and the mean 39·1°; and at Edinburgh the maximum was 45·6°, the minimum 31·7°, and the mean 37·7°. The rainfall at Greenwich measured 0·66 in.; at Glasgow 0·74 in.; and at Edinburgh 1·55 ins.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

QUARTER ENDING SATURDAY, 3RD APRIL, 1909.

[No. 13A.]

DUBLIN REGISTRATION AREA.—Births.—In the Dublin Registration Area, which consists of the city of Dublin and the urban districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, the total area thereof being 13,757 statute acres, and the population, estimated to the middle of 1909, 398,356, there were registered during the thirteen weeks ended on Saturday, 3rd April, 1909, 2,878 births—1,471 boys and 1,407 girls—being equal to an annual ratio of 1 in 34·6, or 28·9 in every 1,000 of the population.

The number of births registered in the city was 2,467, equivalent to an annual rate of 32·2 in every 1,000 of the population; and in the urban districts named above, 411, equal to an annual rate of 18·0 in every 1,000 of the population.

There were registered in London during the same period 30,493 births—being equal to an annual birth-rate of 25·2 in every 1,000 of the estimated population; in Glasgow there were registered 6,216, being equal to 28·5 per 1,000; and in Edinburgh, 1,912—a number affording an annual birth-rate of 21·5 in every 1,000 of the estimated population.

Deaths.—The number of deaths registered in the Dublin Registration Area during the quarter was 2,682—1,300 males and 1,382 females—affording an annual ratio of 1 in 37·1, or 26·9 in every 1,000 of the estimated population; omitting the deaths (130) of persons admitted into Public Institutions from localities outside the Area, the rate was 25·6 per 1,000. The annual mean mortality represented by the deaths registered during the first quarter of the ten years, 1899–1908, in the Dublin Registration Area as then constituted, was 28·5 per 1,000 of the estimated mean population of those years.

The number of deaths of inhabitants* of the North City districts registered last quarter was 1,079, representing an annual mortality of 27·5 in every 1,000 of the population; and the number in the South City districts was 1,049, equivalent to a rate of 28·0 per 1,000. In the urban districts the number of deaths registered was 424, being equal to an annual death-rate of 18·5 in every 1,000.

The number of deaths registered in London during the same period was 23,658—a number equal to an annual rate of mortality of 19·6 in every 1,000 of the inhabitants; in Glasgow the number was 4,344, equal to 19·9 in every 1,000; and in Edinburgh, 1,604, affording an annual death-rate of 18·1 in every 1,000 of the estimated population.

Diseases.—The number of deaths from the principal epidemic diseases† registered in the Dublin Registration Area during last quarter was 189, being 4 above the number for the preceding quarter; and the annual rate per 1,000 of the population represented by the deaths from these diseases was 1·9, being 0·2 above the rate for the preceding three months.

The following tabular statement shows the mortality from each of the principal epidemic diseases in the period under notice, and the average number of deaths from the diseases which occurred in the corresponding period of the 10 years, 1899–1908:—

| NAMES OF DISEASES. | No. of Deaths in March Quarter, 1909. | Average No. of Deaths in March Quarters, 1899- 1908. |
|-----------------------------------|---|--|
| Small-pox, - - - | - | - |
| Measles, - - - | 75 | 22 |
| Scarlet Fever, - - - | 4 | 10 |
| Typhus, - - - | - | 1 |
| Whooping-cough, - - - | 41 | 47 |
| Diphtheria, - - - | 23 | 15 |
| Pyrexia (origin uncertain), - - - | 1 | 1 |
| Enteric Fever, - - - | 25 | 23 |
| Diarrhoeal Diseases, - - - | 20 | 24 |

Small-pox.—There was no mortality from small-pox, nor was there any report of the existence of the disease in the Dublin Registration Area during the period.

Measles.—During the quarterly period there were 75 deaths from measles registered, this figure represents a rate of 0·75 per 1,000 of the population of the Area estimated to the middle of the year 1909. In the 3 preceding quarterly periods, deaths from measles were 34, 55 and 54, respectively. From Table 2 it appears that of 26 deaths from measles appertaining to the city districts of North Dublin Union, 14 were deaths of residents of North City No. 2 District, and of 42 deaths appertaining to the city districts of South Dublin Union, 15 were deaths of residents of South City No. 1 District, and 17 were deaths of residents of South City No. 3 District. The total deaths are 53 in excess of the average for the corresponding quarterly period in the 10 years, 1899–1908. From Table I. it appears that, at the close of the December quarterly period, there were 69 cases of measles being treated in Dublin Hospitals; during the quarter under notice there were 279 cases admitted, there were 24 deaths, and at the close of the period, 65 cases remained under treatment.

Scarlet Fever.—There were 4 deaths from scarlet fever, as against 9, 5 and 3 deaths registered in each of the 3 preceding quarterly periods, and an average of 10 deaths for the corresponding period in the past 10 years. It appears that there

* The death-rates referring to the several Dublin Districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in Public Institutions according to the localities from which the deceased persons were admitted.

† See note (*), p. 216.

was an aggregate of 152 patients treated for scarlet fever in the Dublin Hospitals, and that, during the quarterly period, ending 3rd April, only 3 deaths from the disease in hospital were registered.

Typhus.—Although there is no record of mortality from typhus during the quarter, there were 5 cases of this disease under treatment in hospitals. The average for the corresponding period of the preceding ten years is one death, and the number of deaths registered in the 3 preceding quarterly periods are 0, one and one, respectively.

Whooping-cough.—The mortality from whooping-cough (41 deaths) shows a decline from the average (47), although it is above that in each of the 3 quarterly periods preceding, namely, 22, 14, and 27 deaths. The total deaths from the disease represent an annual rate of 0·41 per 1,000 of the estimated population of the area.

Diphtheria.—Of 23 deaths, corresponding to an annual rate of 0·23 per 1,000, returned as being caused by diphtheria, 9 appertained to the city districts of North Dublin Union, 7 to the city districts of South Dublin Union, one to the Urban District of Rathmines and Rathgar, 3 to the Urban District of Pembroke, and 3 were deaths of persons admitted to institutions from without the Registration Area. A reference to Table I. shows that 16 deaths that occurred in hospitals were registered during the quarter, the aggregate number of cases under treatment being 148.

Enteric Fever.—The number of deaths for which enteric fever was accountable was 25, or two above the average for the corresponding quarter of the preceding 10 years. The deaths are equal to an annual rate of 0·25 per 1,000 of the estimated population, and are below the number (29) registered in the December quarter of 1908, but above the number registered in each of the June and September quarters of that year, namely 5 and 12. With regard to the 25 deaths, 11 were of residents of the North City Districts, 10 of the South City Districts, one a resident of Rathmines and Rathgar Urban District, 2 of Pembroke Urban District and one of a person admitted from without the Registration Area. The hospital statistics show that of a total of 204 persons under treatment during the period, 150 were discharged, 17 died, and 37 remained under treatment at its close.

Diarrhœal Diseases.—The rate represented by the deaths from diarrhœal diseases (numbering 20, as against an average of 24) was 0·20 per 1,000 of the estimated population. Of the 20 deaths, 8 were of North Dublin City, 9 were of South Dublin City, and there was one death appertaining to each of the Urban Districts of Rathmines and Rathgar, Pembroke, and Blackrock.

Influenza.—The deaths from influenza (in number 29) are equal to an annual rate of 0·29 per 1000 of the estimated population of the area. Deaths from this disease in the 3 preceding quarterly periods were 40, 9, and 17 respectively.

Cerebro-spinal Fever.—During the period under notice as in the December quarter of the past year, 2 deaths were attributed to cerebro-spinal fever; in the March quarter of 1908 there were 7 deaths, in the June quarter 16, and in September quarter 5 deaths were registered.

Pneumonia.—The annual death-rate which represents the deaths from pneumonia (all forms)—in number 247—was 2·48 per 1,000 of the estimated population. The total (247) includes 17 deaths from lobar pneumonia, 127 deaths from broncho-pneumonia, and 103 deaths from pneumonia (not defined).

Tuberculous Disease.—To tuberculosis in its various forms the deaths of 449 persons are attributed; in the March quarter of 1908 such deaths amounted to 478, in the succeeding June quarter to 435, in the September quarter to 377, and in the December quarter to 452. The total deaths from all forms of the disease represent an annual rate of 4·51 per 1,000, and include 307 deaths from tuberculous phthisis (*phthisis*), 42 deaths from tuberculous meningitis, 7 deaths from tuberculous peritonitis, 14

deaths from *tuberculosis mesenterica*, and 79 deaths from other forms of the disease. The deaths from tuberculous disease are nearly 17 per cent. of all deaths registered in the period, or in other words, among 6 deaths from all causes registered one was caused by tuberculous disease.

Of the total deaths registered 195 appertained to the city districts of North Dublin Union, 175 to the city districts of South Dublin Union, and 49 to the urban districts, including 18 deaths appertaining to Rathmines and Rathgar Urban District, 19 to Pembroke Urban District, 11 to Kingstown Urban District, and in Blackrock Urban District there was one death from tuberculous meningitis registered. The rates representing the mortality from tuberculous disease for North Dublin City Districts, South Dublin City Districts, and the urban districts were respectively 4·96, 4·67, and 2·14 per 1,000 of the several estimated populations of these areas.

Malignant Diseases.—To carcinoma 38 deaths, to sarcoma 13 deaths, and to cancer (undefined) 56 deaths were attributed; these in the aggregate number 107 deaths, and represent an annual rate of 1·07 per 1,000 of the estimated population.

Premature Birth.—The deaths of 43 infants were registered, whose births were premature.

Diseases of the Brain and Nervous System.—In the aggregate the deaths registered in this division numbered 152, and are equal to an annual rate of 1·53 per 1,000. The total includes the deaths of 55 persons from *convulsions*; of this 54 were deaths of children under 5 years of age.

Diseases of the Heart and Blood Vessels.—Diseases of the organs of blood circulation account for 407 deaths, the total represents an annual rate of 4·09 per 1,000 of the estimated population of the Area.

Diseases of the Respiratory System.—The total (494) includes 440 deaths from bronchitis, and is equivalent to an annual rate of 4·96 per 1,000.

Accidental Violence.—Of 39 deaths attributed to accident or negligence, there were 12 by burns or scalds (the latter figure includes the deaths of 5 children under 5 years of age), there were also 5 deaths of infants under one year old, by suffocation in bed.

Homicide.—There was one homicidal death registered.

Suicide.—Two deaths by suicide were recorded.

TABLE I.—The NUMBER of CASES of the undermentioned DISEASES treated in Dublin Hospitals during the **Quarter** (13 weeks) **ended Saturday, 3rd April, 1909.**

| DISEASES. | No. of Cases in Hospital at close of previous quarter. | No. admitted during quarter. | Discharged. | Died. | No. under treatment on above date. |
|----------------------|--|------------------------------|-------------|-------|------------------------------------|
| Small-pox, . . . | — | — | — | — | — |
| Measles, . . . | 69 | 279 | 259 | 24 | 65 |
| Scarlet Fever, . . . | 48 | 104 | 105 | 3 | 44* |
| Typhus, . . . | — | 5 | 5 | — | — |
| Diphtheria, . . . | 33 | 115 | 97 | 16 | 35 |
| Enteric Fever, . . . | 77 | 127 | 150 | 17 | 37 |
| Pneumonia, . . . | 15 | 130 | 91 | 20 | 34 |

* Exclusive of 11 patients in Beneavin, the convalescent home of Cork-street Fever Hospital.

In 71 instances the cause of death was uncertified, there having been no medical attendant during the last illness. Of the 71 cases, 36 (or 50·7 per cent.) were deaths of children under 5 years of age: these 36 deaths form 4·4 per cent. of the total number of deaths of children of that age. Of the deaths of 121 infants under one

month old registered, there were 14 (or 11·6 per cent.) regarding which the cause was uncertified.

From Table II., on pages 214-5, it will be seen that, excluding 130 deaths of persons admitted into Public Institutions from localities outside the Dublin Registration Area, the number of deaths registered during the quarter was 2,552, equal to an annual rate of 25·6 per 1,000 of the estimated population, and that 183 of these deaths, representing an annual rate of 1·8 per 1,000 persons, were caused by the principal epidemic diseases.* The death-rate for the city (from all causes) was 27·7 per 1,000, and for the urban districts 18·5 per 1,000. The death-rate represented by the mortality from the principal epidemic diseases in the city was 2·1, and in the urban districts 0·9, the rates for the several districts varying from 0·2 in Kingstown Urban District to 3·8 in Clontarf and Howth No. 1 (part of), the 20 deaths from all causes for that district including 2 from measles and 3 from enteric fever.

Occupations.—Table III., on pages 216-6a, shows the occupations or social position of the persons whose deaths were registered during the quarter, the various callings being grouped in classes and orders, so as to show the respective rates of mortality in the several social grades of the population. From this Table it will be observed that the deaths in families of the "Professional and Independent Class" were equal to an annual rate of 23·9 per 1,000 of the persons in that class according to the Census of 1901; in the "Middle Class" the death-rate was 19·2 per 1,000; among the "Artisan Class and Petty Shopkeepers" it was 20·1; and in the "General Service Class" it was 28·5.

Ages.—Of the 2,682 persons whose deaths were registered in the Dublin Registration Area during the quarter, 817 were under 5 years of age, including 461 infants under one year of age, the latter representing a rate of 160·2 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 85·6 in every 1,000 children at that age (according to the Census of 1901); 162 were between the ages of 5 and 20, representing an annual rate of 6·1 per 1,000 persons of that age period; the total number under 20 years being equal to an annual mortality of 27·0 per 1,000 of the population at that age (according to the Census of 1901); 388, or 11·4 per 1,000 persons, were between 20 and 40; 508, or 29·6 per 1,000, between 40 and 60; 680, or 112·1 per 1,000, between 60 and 80; 127, or 266·8 per 1,000, were aged 80 and upwards, including 22 persons aged 90 and upwards.

Public Institutions.—Of the 2,682 deaths recorded during the quarter, 1,102, or 41·1 per cent., occurred in public institutions, viz., 596 in the various hospitals, prisons, and lunatic asylums; 229 in the North Dublin Union Workhouse; 272 in the South Dublin Union Workhouse; and 5 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

Weather.—The mean temperature for thirteen weeks, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, was 40·3°. At Greenwich, for the quarter, it was 38·2°; at Glasgow, 39·4°; and at Edinburgh, 37·7°.

The rainfall at Dublin during the thirteen weeks measured 6·540 inches; at Greenwich, 4·45 inches; at Glasgow, 8·10 inches; and at Edinburgh, 8·16 inches.

* See note (*), page 216b.

TABLE II.—Showing for the **Quarter** (13 weeks) ended **3rd April, 1909**, the number **AREA**, the annual Rate per 1,000 of the Population of the respective Districts represented the principal causes; also the Deaths at certain age-periods, and the number of Uncertified *were admitted.*

* Formerly described as "Simple Continued Fever."

Twenty-two Principal Town Districts of Ireland.—The average annual death-rate represented by the deaths from all causes registered during last quarter in the Dublin Registration Area and twenty-one of the principal Urban Districts of Ireland (exclusive of deaths in Public Institutions of persons admitted from without the districts), was 22·5 per 1,000 persons, the respective rates for the several districts being as follow, ranging in order from the lowest to the highest:—Ballymena, 17·3; Drogheda, 17·6; Portadown, 17·8; Armagh, 17·9; Londonderry, 19·4; Galway, 19·4; Limerick, 19·6; Waterford, 19·7; Belfast, 19·8; Dundalk, 20·5; Sligo, 21·0; Queenstown, 21·2; Wexford, 21·8; Clonmel, 22·4; Newry, 23·2; Newtownards, 23·7; Lurgan, 24·1; Tralee, 24·7; Dublin Registration Area, 25·6; Cork, 25·6; Lisburn, 26·2; and Kilkenny, 30·2.

The average annual rate represented by the deaths from the principal epidemic diseases* in the 22 districts is 1·3 per 1,000 of the population, the rates varying from 0·0 in three of the districts to 2·6 in Newry; the 72 deaths from all causes registered in that district including 6 from whooping-cough, and 2 from diarrhoeal diseases. The 1,911 deaths from all causes for Belfast include 9 from measles, one from scarlet fever, 25 from whooping-cough, 7 from diphtheria, 4 from enteric fever, and 27 from diarrhoeal diseases.

The following is a synopsis of the mortality from the principal epidemic diseases* in the *twenty-one provincial urban districts* already named, and Tables IV. and V. give in detail the results of the registration for the quarter:—

Small-pox.—There was no record of mortality from small-pox during the period under notice.

Measles.—Deaths were registered as follows:—In Belfast, 9; in Kilkenny, 5; in each of Cork and Ballymena, 3; and in each of Galway, Wexford, and Sligo, one death.

Scarlet Fever.—In Cork, 7 deaths; in Limerick, 3 deaths; in Londonderry, 2 deaths; and in Belfast, one death, were registered.

Typhus.—Three deaths from typhus in Waterford and two in Cork are returned.

Whooping-cough.—Twenty-five deaths in Belfast, 16 in Cork, 6 in Newry, and one death in each of Londonderry and Waterford, were registered.

Diphtheria.—Of 19 deaths registered 7 were in Belfast, 4 in Cork, 3 in Lisburn, 2 in Galway, and one in each of Londonderry, Dundalk and Lurgan.

Enteric Fever.—Four deaths were registered in Belfast, 4 in Cork, 2 in Limerick, 2 in Dundalk and one death in Lurgan.

One death in Cork was attributed to pyrexia (origin uncertain).

Diarrhoeal Diseases.—Of 54 deaths attributable to this group 27 appertained to Belfast.

Cerebro-spinal Fever.—The deaths registered from cerebro-spinal fever or *cerebro-spinal meningitis* in Belfast, which numbered 17, 6, and 6 in the three preceding quarters, amounted to 12 in the period under notice

Phthisis.—The death-rate from phthisis for the 22 towns in the aggregate was 2·7 per 1,000 of the population; for the Dublin Registration Area it was 2·9 per 1,000, for Belfast County Borough 2·4 per 1,000, and for the Urban Districts, collectively (exclusive of Belfast and Dublin Registration Area), it was 2·8 per 1,000, exclusive of deaths in public institutions of persons admitted from without the respective areas.

* Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, pyrexia (origin uncertain), enteric fever, and diarrhoeal diseases.

REGISTRATION—QUARTER (13 WEEKS) ENDING SATURDAY, 3RD APRIL, 1909.

• The population given for the Dublin Registration Area and its component parts, and the cities of Belfast and Londonderry, is that estimated to the middle of the year 1908; that for each of the other districts is the Population according to the Census of 1901.

• The population given for the Dublin Registration Area and its component parts, and the cities of Belfast and Londonderry, is that estimated to the middle of the year 1908; that for each of the other districts is the Population according to the Census of 1901.

TABLE V.—Showing, by REGISTRARS' DISTRICTS the Number of BIRTHS and DEATHS in the CITIES (or URBAN DISTRICTS) of BELFAST and CORK registered during the Quarter (3 weeks) ended **3rd April, 1909**. Deaths in Public Institutions of persons admitted from without each City during March and all other Deaths in Public Institutions during the Quarter, and the *deaths* were admitted; with the ANNUAL RATE of MORTALITY per 1,000 of the Population according to the Census of 1901 represented by the Deaths from All Causes and from the principal Epidemic Diseases; the Number of Deaths at certain AGE-PERIODS; the Number of Deaths from some of the Principal CAUSES; the Number of UNCERTIFIED DEATHS, &c.

| CITIES AND REGISTRARS' DISTRICTS | | Population in 1901. | | No. of Births. | | AGES AT DEATH. | | | | | | | | | | DEATHS FROM | | | | | | | | | | No. Deaths in Public Institutions. | | Number of Uncertified Deaths. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

VOL. XLVI.]

WEEK ENDING SATURDAY, 10TH APRIL, 1909.

[No. 14.]

*General Register Office, Charlemont House,
Dublin, 13th April, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 24·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·4 per 1,000, the rates varying from 0·0 in sixteen of the districts to 19·2 in Ballymena, the 8 deaths from all causes registered in that district including 3 from measles and one from diphtheria. Included in the 200 deaths from all causes for Belfast are one from whooping-cough, one from diphtheria, and 3 from diarrhœal diseases. Of the 33 deaths from all causes registered in Cork, 2 are from whooping-cough, and included in the 3 deaths from all causes registered in Newry one is from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 197—117 boys and 80 girls—and the deaths to 205—104 males and 101 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 26·8 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, the rate was 25·5 per 1,000. During the fourteen weeks ending with Saturday last, the death-rate averaged 27·0, and was 1·4 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-13 of Table II.

The total deaths from all causes include 6 deaths from measles, 7 from whooping-cough, one death from diphtheria, 2 deaths from enteric fever, 2 deaths from epidemic diarrhoea, and 3 deaths from influenza. The deaths from measles in each of the 3 preceding weeks were 5, 6, and 9; from whooping-cough were 4, 2, and 6; from diphtheria were one, one, and 4; from enteric fever were 3, one, and 0; from diarrhoeal diseases were one, one, and 2; and deaths from influenza were 5, 4, and 2.

Broncho-pneumonia caused 10 deaths, and there were 10 deaths from *pneumonia* (not defined).

The total deaths from all forms of tuberculous disease amounted to 42, and includes 24 deaths from tuberculous phthisis (*phthisis*), 5 from tuberculous meningitis, 4 from tuberculous peritonitis, 2 from *tabes mesenterica*, and 7 deaths from other forms of the disease. In each of the 3 preceding weeks deaths from all forms of tuberculous disease were 46, 29, and 43.

There were 6 deaths from carcinoma, and 4 from cancer (undefined).

The deaths of 3 prematurely born infants were recorded.

Included in 11 deaths from diseases of the brain and spinal cord were 3 deaths from *convulsions* under 5 years of age, 2 being deaths of infants under one year old.

Diseases of the heart and blood vessels accounted for 21 deaths, and the deaths of 31 persons were attributed to bronchitis.

Of 4 deaths from accidental causes or from negligence, 2 were caused by burns or scalds (of the latter figure one was of a child under 5 years of age), and one was by drowning.

In 6 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases comprise the deaths of 2 infants under one year of age, and the deaths of 4 persons aged 60 years and upwards.

Sixty-four of the persons whose deaths were registered during the week were under 5 years of age (39 being infants under one year, of whom 6 were under one month old) and 52 were aged 60 years and upwards, including 20 persons aged 70 and upwards, of whom 4 were octogenarians.

Ninety-nine of the deaths registered during the week occurred in hospitals and other public institutions; of this number 11 took place in the North Dublin Union Workhouse and 24 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 25.5 per 1,000; the rate in the City was 28.5 (North City Districts, 26.2; South, 31.0), and in the Suburbs, 15.4.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2.2 per 1,000 inhabitants, the rate for the City being 2.7 (2.3 in the North City Districts, and 3.1 in the South), and for the Suburbs, 0.6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (16) are equal to an annual rate of 28.2 per 1,000. Influenza, whooping-cough, and broncho-pneumonia each caused one death, there was one death from tuberculous disease, and there were 3 deaths from bronchitis.

No. 1 North City District West (Summer-hill).—The deaths (18) are equal to an annual rate of 23.7 per 1,000, and include one death from whooping-cough, one death from epidemic diarrhoea, 7 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (14) are equivalent to an annual rate of 24.0 per 1,000. Measles, whooping-cough, and broncho-pneumonia each caused one death, there were 3 deaths from tuberculous disease, one death from bronchitis, and one death from accidental scalds.

No. 3 North City District (Benburb-street).—The deaths (17) represent an annual rate of 26.7 per 1,000. The deaths include one from *pneumonia* (not defined), 5 from tuberculous disease, 3 deaths from bronchitis, and one death by drowning.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19.6 per 1,000 inhabitants; Coolock and Drumcondra, No. 1, part of, 45.4; and Finglas and Glasnevin, part of, 13.7. Of the 2 deaths recorded for Clontarf and Howth, No. 1, part of, one was from tuberculous phthisis; the 10 deaths from all causes for Coolock and Drumcondra, part of, include one death each from whooping-cough, influenza, broncho-pneumonia, *phthisis*, and bronchitis; and of the 2 deaths recorded for Finglas and Glasnevin, part of, there was one death from whooping-cough.

No. 1 South City District (South Earl-street).—The deaths (29) represent an annual rate of 36.9 per 1,000. Among the deaths there was one from measles, there were 2 from whooping-cough, one from broncho-pneumonia, 3 from *pneumonia* (not defined), 6 from tuberculous disease, and 6 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (14) are equal to an annual rate of 33.9 per 1,000, and include one death from broncho-pneumonia, one death from *pneumonia* (not defined), 4 deaths from tuberculous disease, and 6 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (23) are equal to an annual rate of 23.1 per 1,000. There were 3 deaths from measles, one death from diphtheria, one death from broncho-pneumonia, 4 deaths from tuberculous disease, and 5 deaths from diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (22) are equivalent to an annual rate of 32.3 per 1,000. Enteric fever and epidemic diarrhoea each caused one death, there were 4 deaths from broncho-pneumonia, and one death from *pneumonia* (not defined), 4 deaths from tuberculous phthisis (*phthisis*), 2 deaths from bronchitis, and one death from neglect of an infant at birth.

New Kilmainham District.—The one death registered is equal to an annual rate of 5.8 per 1,000. Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 12.8; Pembroke, 22.0; Blackrock, 6.0; and Kingstown, 14.8. The only death from any of the principal epidemic diseases tabulated for these districts was one from measles for Rathmines and Rathgar. Of the 9 deaths from all causes for Rathmines and Rathgar one death was from *phthisis*, and 2 deaths were from bronchitis; the 12 deaths from all causes for Pembroke include one from *pneumonia* (not defined), and one from bronchitis; the only death recorded for Blackrock was from *phthisis*; and the 5 deaths from all causes for Kingstown include one from influenza, one from tuberculous peritonitis, and one from accidental burns.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 10th April, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 10th April, 1909.

From this it appears that:—

Sixteen cases of measles were admitted into hospital during the week, 32 were discharged, there were 4 deaths, and 45 cases remained under treatment at its close.

Thirteen cases of scarlet fever were admitted to hospital, 9 were discharged, and 48* cases remained under treatment at the close of the week.

There was one death from typhus of a person admitted to hospital during the week.

Twelve cases of diphtheria were admitted to hospital, 11 were discharged, there was one death, and 35 patients remained under treatment at the close of the week.

Four cases of enteric fever were admitted to hospital during the week, 7 were discharged, there was one death, and 33 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 13 cases of pneumonia were admitted to hospital 13 were discharged, there was one death, and 33 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 15·9) was equal to an average annual death-rate of 17·0 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 17·7 per 1,000, the rate for Glasgow being 19·6 and for Edinburgh 15·4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 10th April. From this Report it appears that of a total of 39 cases notified, 22 were scarlet fever, 7 diphtheria, 4 erysipelas, 4 phthisis, one enteric fever, and one cerebro-spinal fever. Among the 358 cases of infectious diseases in hospital at the close of the week were 152 cases of scarlet fever, 64 of whooping-cough, 45 of phthisis, 40 of diphtheria, 14 of measles, 12 of erysipelas, 5 of cerebro-spinal fever, 4 of chicken-pox, 2 of puerperal fever, one of enteric fever and one of small-pox.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS** and **DEATHS** registered during the Week ending Saturday, 10th April, 1990, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Unidentified Deaths: also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(n) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1903.

(o) Admitted to hospital from localities outside the Area.

(p) Formerly described as "Simple Continued Fever."

(q) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Burgan, Newry, and Portadown, those at Markree for Sligo, and those at Roche's Point for Cork and Queenstown.

(r) Observations at Ordnance Survey Office, Phoenix Park.

(s) Observations by Sir John Moore taken at Fitzwilliam-square.

(t) Observations by Mr. P. W. Moore.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 10th April, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 10th April, 1909:—

"Opening with gloom and rain, this week proved very fine and springlike, the sun shining brightly in an unclouded sky daily after Monday. Sunday broke dull and wet in Dublin, but the rain ceased at 11 a.m. and the afternoon was dry and cold, the sky remaining overcast. An anticyclone of large size and much staying power was, as the week began, spreading westward to Ireland—in England the weather was fair as during the previous days, but temperature was low. On Monday forenoon the sheet of cirriform cloud which in Dublin had covered the sky from the morning of Friday, April 2, gradually became thinner, showing a solar halo, and finally disappeared. With this change, a period of cloudless skies, warm sunny days and cold, hazy nights set in, lasting till Saturday, when, with the setting in of a westerly aircurrent, summerlike warmth was experienced. From Monday to Saturday the atmosphere was for the most part calm, light easterly sea breezes by day giving place to equally light westerly land breezes by night. During the intervening periods of calm—morning and evening—smoke haze or fog prevailed in the City and its suburbs. Large as was the diurnal range of temperature in Dublin—21.1° on Wednesday, 22.6° on Thursday, 21.9° on Friday, and 28.0° on Saturday—it was much larger at some British stations. On Wednesday the thermometer rose to 65° at Bath and Oxford, falling a few hours' later to 29° at the former, and to 30° at the latter place. Even at Nairn, in Scotland, the diurnal range on that day was from 63° to 30°. At Oxford, 72° was recorded on Friday, the thermometer subsequently falling to 35° at night. On Saturday, with the coming of a W. wind, the thermometers rose from 40.0° to 68.0° in Dublin. Cirrus appeared in the afternoon and a partial solar halo was seen. In Dublin the mean height of the barometer was 30.269 inches, the range being from 30.435 inches at 9 a.m. of Wednesday (wind, N.E.) to 29.946 inches at 9 p.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 46.3°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 44.8°. The screened thermometers sank to 34.1° on Thursday and rose to 68.0° on Saturday. The prevailing wind was light easterly. Rain fell on Sunday to the amount of .029 inch."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.116 inches. The highest reading (30.281) was on Wednesday at 9 a.m., air calm, and the lowest (29.779) on Saturday at 9 p.m., wind S.W.

The mean temperature for the week was 44.5°, being 0.1° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 68.6°, and was lowest on Thursday, the mercury having fallen to 25.9°. The mean of the Dry Bulb for the week was 44.9° and of the Wet Bulb 42.0°. The mean humidity of the air was .81, complete saturation being represented by 1.0. The rainfall during the week measured 0.275 inch.

At Greenwich the mean temperature for the week was 46.9°, the maximum 69.0°, and the minimum 30.1°; at Glasgow the maximum was 64.8°, the minimum 30.0°, and the mean 46.6°; and at Edinburgh the maximum was 64.6°, the minimum 29.6°, and the mean 46.4°. There was no rainfall recorded at Greenwich, Glasgow, or Edinburgh.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

VOL. XLVI.]

WEEK ENDING SATURDAY, 17TH APRIL, 1909.

[No. 15.]

*General Register Office, Charlemont House,
Dublin, 19th April, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 26·5 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality:

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 14·0 | 14·0 | 23·3 | 23·3 | 18·7 |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·6 per 1,000, the rates varying from 0·0 in sixteen of the districts to 4·8 in Ballymena, the 4 deaths from all causes registered in that district including one from measles. Of the 206 deaths from all causes registered in Belfast 2 are from whooping-cough, 3 from diarrhœal diseases, and one from *cerebro-spinal meningitis*. Included in the 44 deaths from all causes registered in Cork are one from scarlet fever, one from typhus, one from whooping-cough, and 3 from diphtheria. One death from diphtheria is included in the 11 deaths from all causes registered in Lurgan, and one death from diphtheria is also included in the 6 deaths from all causes in Lisburn.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 217—105 boys and 112 girls—and the deaths to 220—104 males and 116 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 28·8 in every 1,000 of the population; omitting the deaths (numbering 8) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

§ The Registrar of Armagh reports:—"The ages at death of the five registered as from the Urban District of Armagh were 69, 70, 71, 73, and 89 years. There were in all eight deaths registered as from my Urban and Rural Districts combined in this week, whose ages were at death 69, 70, 71, 71, 73, 78, 77, 89. It is certainly a most singular record, and they all died between Saturday, the 10th inst., and Thursday, the 15th inst., inclusive."

from localities outside the Area, the rate was 27·7 per 1,000. During the fifteen weeks ending with Saturday last, the death-rate averaged 27·1, and was 1·2 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the total deaths there were 6 from measles (including 2 deaths from measles, diphtheria), one death from scarlet fever, 11 deaths from whooping-cough, 2 from diphtheria, one death from enteric fever, 2 deaths from diarrhoeal diseases, one death from cerebro-spinal fever, and 4 deaths from influenza. In each of the 3 weeks preceding, deaths from measles were 6, 9, and 6; deaths from scarlet fever were 0, 0, and 0; deaths from whooping-cough were 2, 6, and 7; deaths from diphtheria were one, 4, and one; deaths from enteric fever were one, 0, and 2; deaths from diarrhoeal diseases were one, 2, and 2; deaths from cerebro-spinal fever were 0, 0, and 0; and deaths from influenza were 4, 2, and 3.

There were 9 deaths from broncho-pneumonia, and 14 from pneumonia (not defined).

Of 43 deaths from tuberculous disease (all forms of), there were 22 from tuberculous phthisis (*phthisis*), 5 from tuberculous meningitis, one from tuberculous peritonitis, one from *tabes mesenterica*, and 14 deaths from other forms of the disease. In each of the 3 weeks preceding, deaths from all forms of tuberculous disease were 29, 43, and 42.

Deaths from malignant diseases were as follows:—7 from carcinoma, one from sarcoma, and 3 deaths from cancer, malignant disease (undefined).

Premature birth was the registered cause of death of 4 infants.

Diseases of the brain and nervous system accounted for 17 deaths, including 7 deaths from convulsions. Of the latter figure, 5 were deaths of infants under one year, one being under one month old.

There were 27 deaths from diseases of the heart and blood vessels, and 30 deaths from bronchitis were registered.

Of 3 accidental deaths, one was by drowning.

There was one death by suicide, namely, inhalation of coal gas.

In 5 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 2 children under 5 years of age, and the deaths of 2 persons aged 60 years and upwards.

Seventy-five of the persons whose deaths were registered during the week were under 5 years of age (37 being infants under one year, of whom 7 were under one month old) and 62 were aged 60 years and upwards, including 28 persons aged 70 and upwards, of whom 3 were octogenarians.

Eighty of the deaths registered during the week occurred in hospitals and other public institutions; of this number 17 took place in the North Dublin Union Workhouse and 19 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 27·7 per 1,000; the rate in the City was 30·6 (North City Districts, 30·9; South, 30·3), and in the Suburbs, 18·2.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2·7 per 1,000 inhabitants, the rate for the City being 2·9 (20 in the North City Districts, and 3·8 in the South), and for the Suburbs, 2·3 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (23) are equal to an annual rate of 40·5 per 1,000, including 3 deaths from broncho-pneumonia, one death from pneumonia (not defined), 5 deaths from tuberculous disease, 2 deaths from bronchitis, and 2 accidental deaths.

No. 1 North City District West (Summer-hill).—The deaths (27) are equal to an annual rate of 35·6 per 1,000. There was one death from measles, also one death from influenza, and one death from broncho-pneumonia, there were 2 deaths from pneumonia (not defined), 7 deaths from tuberculous disease, and 7 deaths from diseases of the respiratory system.

No. 2 North City District (Lisburn-street).—The deaths (19) are equivalent to an annual rate of 32·6 per 1,000. The deaths include one from broncho-pneumonia, 2 from pneumonia (not defined), one from tuberculous phthisis, and 6 deaths from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (14) represent an annual rate of 22·0 per 1,000. Diphtheria and diarrhoea each caused one death, and there were 4 deaths from tuberculous disease.

Other North City Districts. The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 36·3; and Finglas and Glasnevin, part of, 0·0. Of the 2 deaths for Clontarf and Howth, No. 1, part of, one was from bronchitis, and included in the 8 deaths from all causes for Coolock and Drumcondra, part of, 2 are from whooping-cough, one from enteric fever, and one from tuberculous meningitis.

No. 1 South City District (South Earl-street).—The deaths (31) represent an annual rate of 39·4 per 1,000, and include one death from measles, 2 deaths from whooping-cough, 2 deaths from broncho-pneumonia, 2 deaths from pneumonia (not defined), 10 deaths from tuberculous disease, and 4 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·3 per 1,000. Whooping-cough caused 2 deaths, and pneumonia (not defined) 3 deaths, and there were 2 deaths from tuberculous phthisis (*phthisis*).

No. 3 South City District (Peter-street).—The deaths (25) are equal to an annual rate of 30·5 per 1,000. Measles caused 3 deaths, whooping-cough caused 2 deaths, there was one death from cerebro-spinal fever, also one death from tuberculous disease, one death from pneumonia (not defined), and there were 7 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (17) are equivalent to an annual rate of 25·0 per 1,000. Among the deaths were one from epidemic diarrhoea, one from broncho-pneumonia, 3 from tuberculous phthisis (*phthisis*), and 4 deaths from diseases of the respiratory system.

New Kilmainham District. The deaths (5) are equal to an annual rate of 29·0 per 1,000. There was not one death from either of the general diseases, or from diseases of the respiratory system included in the 5 deaths registered.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 17·1; Pembroke, 23·8; Blackrock, 23·8; and Kingstown, 9·9. The deaths from the principal epidemic diseases tabulated for these districts comprise 2 from whooping-cough for Rathmines and Rathgar, and one each from scarlet fever and whooping-cough for Pembroke. The 12 deaths from all causes for Rathmines and Rathgar include one from influenza, one from pneumonia (not defined), 4 from tuberculous disease, and one from bronchitis. Of the 13 deaths from all causes for Pembroke there was one death each from broncho-pneumonia and pneumonia (not defined), there were 4 deaths from tuberculous disease, and one from bronchitis. Included in the 4 deaths from all causes for Blackrock one is from influenza and one from tuberculous phthisis, and of the 3 deaths for Kingstown one is from influenza.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 17th April, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 17th April, 1909.

From this it appears that:—

Nine cases of measles were admitted into hospital during the week, 18 were discharged, there were 2 deaths, and 34 cases remained under treatment at its close.

Nine cases of scarlet fever were admitted to hospital, 6 were discharged, and 51* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Eight cases of diphtheria were admitted to hospital, 8 were discharged, there were 2 deaths, and 33 patients remained under treatment at the close of the week.

Seven cases of enteric fever were admitted to hospital during the week, 7 were discharged, there was one death, and 32 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 11 cases of pneumonia were admitted to hospital, 15 were discharged, there were 2 deaths, and 27 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 17.3) was equal to an average annual death-rate of 17.1 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 18.3 per 1,000, the rate for Glasgow being 19.3 and for Edinburgh 17.9.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 17th April. From this Report it appears that of a total of 44 cases notified, 22 were phthisis, 10 scarlet fever, 7 diphtheria, 3 erysipelas, one enteric fever, and one cerebro-spinal fever. Among the 336 cases of infectious diseases in hospital at the close of the week were 142 cases of scarlet fever, 61 of whooping-cough, 44 of phthisis, 39 of diphtheria, 12 of erysipelas, 10 of measles, 5 of cerebro-spinal fever, 4 of chicken-pox, 2 of enteric fever, one of puerperal fever and one of small-pox.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the Week ending Saturday, 17th April, 1903, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **TEMPERATURE** and **RAINFALL** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 17th April, 1909:—

"Throughout this week, with the exception of Thursday, the weather was very unsettled and showery. But vegetation made rapid progress, and by the close of the period the spring foliage made a good show. Atmospheric pressure was generally low over North-western Europe, and depressions of no great size or depth followed each other at short intervals from their birthplace on the Atlantic. Easter Day was cloudy at first and in the afternoon there were passing showers of rain and hail, a gorgeous double rainbow appearing at 5.30 p.m. On Monday squalls and showers prevailed, baric gradients being steep between a band of high pressure stretching from the Azores to Spain and a depression lying off the S.W. of Ireland—at 7 a.m. the barometer read 30.34 inches at Horta in the Azores, but only 29.11 inches at Reykjavik in Iceland. By Tuesday morning a subsidiary depression had reached the N.W. of Ireland, causing very rainy, squally weather in this country. On Wednesday morning a narrow trough of low pressure (29.4 inches) stretched from the Hebrides to the mouth of the Elbe—to the northward, cold easterly winds prevailed; to the southward, fresh westerly winds. A brief spell of fair weather was enjoyed on Thursday, but in the course of the following night a small secondary depression developed over the Irish Sea and St. George's Channel, rain falling heavily along the adjoining coasts. After frequent showers on Friday afternoon and some rain early next morning, Saturday proved fine and genial. The sky, however, still wore an unsettled aspect. In Dublin the mean height of the barometer was 29.707 inches, the range being from 29.374 inches at 4 p.m. of Tuesday (wind, S.E.) to 29.972 inches at 9 a.m. of Thursday (wind, W.S.W.). The corrected mean temperature was 49.9°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 49.0°. On Monday the screened thermometers fell to 41.9°, on Saturday they rose to 59.4°. The prevalent winds were W. and S.W. Rain fell daily, the total measurement being 1.136 inches, of which .447 inch was recorded on Thursday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.555 inches. The highest reading (29.829) was on Thursday at 9 a.m., wind S.W., and the lowest (29.336) on Tuesday at 9 p.m., wind W.S.W.

The mean temperature for the week was 48.6°, being 5.7° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 59.1°, and was lowest on Thursday, the mercury having fallen to 33.9°. The mean of the Dry Bulb for the week was 47.6° and of the Wet Bulb 45.3°. The mean humidity of the air was .84, complete saturation being represented by 1.0. The rainfall during the week measured 1.104 inches.

At Greenwich the mean temperature for the week was 51.5°, the maximum 71.3°, and the minimum 35.2°; at Glasgow the maximum was 57.1°, the minimum 39.1°, and the mean 46.9°; and at Edinburgh the maximum was 55.9°, the minimum 33.4°, and the mean 45.1°. The rainfall at Greenwich measured 0.22 in.; at Glasgow, 1.09 ins.; and at Edinburgh 0.57 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 24TH APRIL, 1909.

[No. 16.]

*General Register Office, Charlemont House,
Dublin, 26th April, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week in the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 23·9 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, in the several Districts alphabetically arranged corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

The deaths from certain epidemic diseases‡ registered in the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in fourteen of the districts to 13·7 in Armagh, the 7 deaths from all causes in that district including one from whooping-cough and one from diphtheria. Among the 172 deaths from all causes registered in Belfast are 7 from whooping-cough. Of the 40 deaths from all causes registered in Cork are one from whooping-cough, one from enteric fever, and one from diarrhœa; and of the 9 deaths from all causes registered in Lisburn 2 are from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 289—150 boys and 139 girls—and the deaths to 194—94 males and 100 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 25·4 in every 1,000 of the population; omitting the deaths (numbering 7) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 24·5 per 1,000. During the sixteen weeks ending with Saturday last, the death-rate averaged 27·0, and was 1·3 below the mean rate for the corresponding portions of the ten years 1899-1908.

Of the 194 deaths from all causes, there were 3 from measles, 6 from whooping-cough, one from enteric fever, one from epidemic diarrhoea, 2 from cerebro-spinal fever, and 9 from influenza. In the 3 preceding weeks, deaths from measles numbered 9, 6, and 6; deaths from whooping-cough, 6, 7, and 11; deaths from enteric fever, 0, 2 and one; deaths from diarrhoeal diseases, 2, 2, and 2; deaths from cerebro-spinal fever, 0, 0, and one; and deaths from influenza, 2, 3, and 4, respectively.

Three deaths were attributed to lobar pneumonia, 5 to broncho-pneumonia, and 16 to *pneumonia* (not defined).

Deaths from all forms of tuberculous disease which had been 43, 42, and 43, respectively, in the 3 preceding weeks fell to 29 last week, the latter figure including 20 deaths from tuberculous phthisis (*phthisis*), one each from tuberculous meningitis and *tabes mesenterica*, and 7 from other forms of tuberculous disease.

There were 5 deaths from carcinoma and 5 from cancer, malignant disease (undefined).

The deaths of 6 infants, prematurely born, were registered.

To diseases of the brain and nervous system 8 deaths were ascribed, including one, that of an infant under one year of age, from *convulsions*.

Diseases of the heart and blood vessels caused 27 deaths, and bronchitis 22 deaths.

The weekly returns did not contain any record of death by violence, accidental or otherwise.

In one instance only, that of an infant under one year of age, was the cause of death "uncertified."

Forty-eight of the persons whose deaths were registered during the week were under 5 years of age (28 being infants under one year, of whom 8 were under one month old) and 62 were aged 60 years and upwards, including 32 persons aged 70 and upwards, of whom 10 were octogenarians, and one (a female) was stated to have been aged 99 years.

Ninety-one of the deaths registered during the week occurred in hospitals and other public institutions; of this number 27 took place in the North Dublin Union Workhouse and 19 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 24·5 per 1,000; the rate in the City was 25·7 (North City Districts, 27·5; South, 23·7), and in the Suburbs, 20·5.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·6 per 1,000 inhabitants, the rate for the City being 1·7 (23 in the North City Districts, and 10 in the South), and for the Suburbs, 1·1 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (13) are equal to an annual rate of 22·9 per 1,000. There were 2 deaths from whooping-cough, 2 from influenza, 2 from tuberculous phthisis, and one from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (22) are equal to an annual rate of 29·0 per 1,000. Two deaths from whooping-cough, one each from broncho-pneumonia and *pneumonia* (not defined), 4 from tuberculous disease, and 2 from bronchitis were recorded.

No. 2 North City District (Lisburn-street).—The deaths (22) are equivalent to an annual rate of 37·7 per 1,000. Among them are 3 from *pneumonia* (not defined), 6 from tuberculous disease, and 3 from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (15) represent an annual rate of 23·6 per 1,000, and include one death each from enteric fever, influenza, and broncho-pneumonia, 3 deaths from *pneumonia* (not defined), one from tuberculous phthisis, and 4 from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 22·7; and Finglas and Glasnevin, part of, 27·4. Of the 2 deaths recorded for Clontarf and Howth, No. 1, part of, one is from *pneumonia* (not defined), and one from tuberculous disease; the 5 deaths from all causes for Coolock and Drumcondra, part of, include one from influenza and one from *phthisis*; and of the 4 deaths from all causes for Finglas and Glasnevin, part of, one is from *pneumonia* (not defined).

No. 1 South City District (South Earl-street).—The deaths (15) represent an annual rate of 19·1 per 1,000. There were 2 deaths from tuberculous disease, and 3 from bronchitis.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·8 per 1,000. There was one death from cerebro-spinal fever; 2 deaths were attributed to broncho-pneumonia, 2 to tuberculous phthisis (*phthisis*), and 2 to bronchitis.

No. 3 South City District (Peter-street).—The deaths (25) are equal to an annual rate of 30·5 per 1,000, and include one death from broncho-pneumonia, 3 deaths from *pneumonia* (not defined), 5 from tuberculous disease, and 3 from diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (16) are equivalent to an annual rate of 23·5 per 1,000. Measles, influenza, and *pneumonia* (not defined), each caused one death, and there were 4 deaths from diseases of the respiratory system.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. One of the deaths was from whooping-cough, and one from epidemic diarrhoea.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 24·2; Pembroke, 18·3; Blackrock, 23·8; and Kingstown, 14·8. The deaths from the principal epidemic diseases tabulated for these districts comprise one from whooping-cough for Blackrock, and one from measles for Kingstown. Among the 17 deaths from all causes for Rathmines and Rathgar are 2 from influenza, one from cerebro-spinal fever, 2 from *pneumonia* (not defined), one from *phthisis*, and one from bronchitis; of the 10 deaths from all causes for Pembroke 2 are from lobar-pneumonia, one from *pneumonia* (not defined), 2 from tuberculous disease, and 2 from bronchitis; the 4 deaths from all causes for Blackrock include one from influenza, and one from lobar-pneumonia; and of the 5 deaths from all causes for Kingstown one is from influenza, and one from tuberculous meningitis.

* See Columns 10-13 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 24th April, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 24th April, 1909.

From this it appears that:—

Thirteen cases of measles were admitted into hospital during the week, 11 were discharged, and 36 cases remained under treatment at its close.

Seven cases of scarlet fever were admitted to hospital, 10 were discharged, and 48* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Nine cases of diphtheria were admitted to hospital, 8 were discharged, there was one death, and 33 patients remained under treatment at the close of the week.

Eleven cases of enteric fever were admitted to hospital during the week, 5 were discharged, there was one death, and 37 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 15 cases of pneumonia were admitted to hospital, 14 were discharged, and 28 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 15.0) was equal to an average annual death-rate of 15.8 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 17.4 per 1,000, the rate for Glasgow being 17.4 and for Edinburgh 18.5.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 24th April. From this Report it appears that of a total of 51 cases notified, 19 were phthisis, 11 scarlet fever, 10 diphtheria, 5 puerperal fever, 4 erysipelas, one enteric fever, and one cerebro-spinal fever. Among the 330 cases of infectious diseases in hospital at the close of the week were 131 cases of scarlet fever, 64 of whooping-cough, 42 of phthisis, 42 of diphtheria, 15 of measles, 13 of erysipelas, 4 of cerebro-spinal fever, 3 of puerperal fever, 3 of chicken-pox, 2 of enteric fever and one of small-pox.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS AND DEATHS registered during the Week ending Saturday, 24th April, 1900, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions and Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths: also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

| REGISTRATION—WEEK ENDING SATURDAY, 24TH APRIL, 1900. | | | | | | | | | | METEOROLOGY. (c) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 24th April, 1909:—

"Changeable but favourable weather prevailed. The general distribution of atmospheric pressure over North-western Europe was cyclonic, the area of lowest barometer being generally found over the Ocean between Ireland and Iceland. On Tuesday, and again on Thursday and Friday (but to a less extent), a secondary trough of low pressure stretched across the British Isles from the Atlantic depression to the North Sea. These 'secondaries' carried broken weather and rainfalls to England as well as to Ireland. Throughout Sunday forenoon a solar halo was seen from Dublin, but the afternoon was very fine and bright save for one slight shower, and there was marked visibility. In the course of Monday an Atlantic depression spread in over Ireland and the weather became dull and damp. The westerly winds of this system were strong on Tuesday, but they lulled towards evening. On Wednesday and until midday on Thursday strong and squally southerly winds were experienced in connection with a large Atlantic depression in which the barometer fell to 29.02 inches at Valentia, Co. Kerry, at 7 a.m. of Thursday. At this time the wind blew a strong gale from S.S.E. at Roche's Point, Cork Harbour. In Dublin a wet and squally morning was followed by a fine, bright afternoon. Friday was brilliant to showery. On Saturday a new, but shallow, depression caused light, very variable winds, clouds and rain in the forenoon, followed by fine, cool weather and S.W. winds to the close of the period. There were some electrical disturbances in places on Monday and again on Friday and Saturday. In Dublin the mean height of the barometer was 29.616 inches, pressure ranging between 30.000 inches at 9 p.m. of Tuesday (wind, S.W.) and 29.221 inches at 4 p.m. of Thursday (wind, S.) The corrected mean temperature was 50.8°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 49.7°. The screened thermometers fell to 43.2° on Tuesday and rose to 60.1° on Friday. S.W. winds predominated. Rain fell on 5 days to the amount of .478 inch, of which .150 inch was recorded on Wednesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.456 inches. The highest reading (29.844) was on Tuesday at 9 p.m., wind S.W., and the lowest (28.134) on Thursday at 9 p.m., wind S.S.W.

The mean temperature for the week was 48.9°, being 4.4° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Thursday and Friday, on which days the thermometer registered 58.5°, and was lowest on Saturday, the mercury having fallen to 37.3°. The mean of the Dry Bulb for the week was 49.2° and of the Wet Bulb 46.0°. The mean humidity of the air was .80, complete saturation being represented by 1.0. The rainfall during the week measured 0.379 inch.

At Greenwich the mean temperature for the week was 52.2°, the maximum 68.7°, and the minimum 34.4°; at Glasgow the maximum was 60.4°, the minimum 37.2°, and the mean 49.9°; and at Edinburgh the maximum was 60.1°, the minimum 39.0°, and the mean 49.2°. The rainfall at Greenwich measured 0.72 in.; at Glasgow, 0.59 in.; and at Edinburgh 0.34 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 1ST MAY, 1909.

[No. 17.]

*General Register Office, Charlemont House,
Dublin, 3rd May, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 20·6 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Cork, | 22·6 | 30·1 | 27·4 | 21·9 | 25·5 | Newtownards, | 401 | 34·3 | 17·2 | 5·7 | 24·3 |
| Drogheda, | 24·5 | 20·4 | 41 | 12·3 | 15·3 | Portadown, | 15·5 | | 31·0 | 10·3 | 14·2 |
| Dublin Reg. Area, | 25·5 | 27·7 | 24·5 | 22·0 | 24·9 | Queenstown, | 13·2 | 26·4 | 19·8 | 13·2 | 18·2 |
| Dundalk, | 27·9 | 19·9 | 23·9 | 12·0 | 20·9 | Sligo, | 19·2 | 9·6 | 19·2 | 14·4 | 15·6 |
| Galway, | 35·0 | 27·2 | 27·2 | 31·1 | 30·1 | Tralee, | 5·3 | 10·6 | 37·0 | 47·6 | 25·1 |
| Kilkenny, | 19·7 | 29·5 | 14·7 | 4·9 | 17·2 | Waterford, | 9·7 | 23·4 | 35·1 | 15·6 | 21·0 |
| | | | | | | Wexford, | 23·3 | 23·3 | 18·7 | 9·3 | 18·7 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·4 per 1,000, the rates varying from 0·0 in fifteen of the districts to 8·9 in Lurgan, the 8 deaths from all causes for that district including 2 from scarlet fever. Among the 141 deaths from all causes for Belfast are 3 from whooping-cough, and 3 from diarrhoeal diseases. Of the 32 deaths from all causes for Cork there were 2 from whooping-cough, and one from enteric fever. The 18 deaths from all causes for Limerick include one death each from diphtheria and diarrhoea. Of the 5 deaths from all causes for Lisburn there was one death from measles; and the 5 deaths from all causes for Ballymena include also one death from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 165—86 boys and 79 girls—and the deaths to 179—100 males and 79 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 23·4 in every 1,000 of the population; omitting the deaths (numbering 11) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 22·0 per 1,000. During the seventeen weeks ending with Saturday last, the death-rate averaged 26·8; and was 1·3 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths (179) include 2 from measles, one from scarlet fever, 13 from whooping-cough, 3 from influenza, and 2 deaths from cerebro-spinal fever. In each of the 3 preceding weeks, deaths from measles were 6, 6, and 3; deaths from scarlet fever were 0, one, and 0; deaths from whooping-cough were 7, 11, and 6; deaths from influenza were 3, 4 and 9; and deaths from cerebro-spinal fever were 0, one, and 2.

There were 2 deaths from lobar pneumonia, 3 deaths from broncho-pneumonia, and 9 deaths from pneumonia (not defined).

Tuberculous disease (all forms of) caused the deaths of 33 persons; the total includes 27 deaths from tuberculous phthisis (*phthisis*), one death from tuberculous meningitis, 2 deaths from *tubercles mesenterici*, and 3 from other forms of the disease. In the 3 preceding weeks, deaths from all forms of tuberculous disease numbered 42, 43, and 29, respectively.

Of 7 deaths from malignant diseases, 2 were from carcinoma, and 5 were returned as from cancer or malignant disease (undefined).

The deaths of 7 prematurely born infants were registered.

Among 8 deaths from diseases of the brain and nervous system there were 3 deaths of infants under one year of age, from *convulsions*.

Twenty-six deaths were caused by diseases of the heart or blood vessels, and bronchitis accounted for 25 deaths.

Of 4 deaths from accidental causes one was by burns, and one was by drowning.

In 4 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 2 children under 5 years of age (including one infant under one year old), and the deaths of 2 persons aged 60 years and upwards.

Fifty of the persons whose deaths were registered during the week were under 5 years of age (31 being infants under one year, of whom 11 were under one month old) and 56 were aged 60 years and upwards, including 33 persons aged 70 and upwards, of whom 8 were octogenarians, and 2 (males) were stated to have been aged 95 and 90 years, respectively.

Seventy-two of the deaths registered during the week occurred in hospitals and other public institutions; of this number 15 took place in the North Dublin Union Workhouse and 18 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 22·0 per 1,000; the rate in the City was 23·1 (North City Districts, 22·9; South, 24·0), and in the Suburbs, 17·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2·1 per 1,000 inhabitants, the rate for the City being 2·4 (2·3 in the North City Districts, and 2·4 in the South), and for the Suburbs, 1·1 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (18) are equal to an annual rate of 31·7 per 1,000. Whooping-cough caused 3 deaths, there was one death from lobar pneumonia, there were 5 deaths from tuberculous disease, one death from bronchitis, and one death by drowning.

No. 1 North City District, West (Summer-hill).—The deaths (9) are equal to an annual rate of 11·9 per 1,000, and include 2 deaths from pneumonia (not defined), and 2 deaths from tuberculous disease.

No. 2 North City District (Lisburn-street).—The deaths (27) are equivalent to an annual rate of 46·3 per 1,000. The deaths included one from whooping-cough, one from influenza, one from pneumonia (not defined), 4 from tuberculous phthisis (*phthisis*), and 5 deaths from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (13) represent an annual rate of 20·1 per 1,000. Among the deaths were 2 from whooping-cough, one from scarlet fever, one from cerebro-spinal fever, one from broncho-pneumonia, 2 from tuberculous disease, and one death from bronchitis.

Other North City Districts. The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 4·5 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 6·9. The only death recorded for Coolock and Drumcondra, part of, was one from bronchitis; and the only death for Finglas and Glasnevin, part of, was one from tuberculous phthisis.

No. 1 South City District (South Earl-street).—The deaths (19) represent an annual rate of 24·2 per 1,000. Whooping-cough and pneumonia (not defined), each caused one death; there were 5 deaths from tuberculous disease, and one death from bronchitis.

No. 2 South City District (Castle-street).—The deaths (5) are equal to an annual rate of 12·1 per 1,000, and include one death from phthisis, and 3 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (22) are equal to an annual rate of 26·8 per 1,000. Whooping-cough caused 3 deaths, broncho-pneumonia and pneumonia (not defined) each caused one death; there were 5 deaths from tuberculous disease, 5 deaths from diseases of the respiratory system, and one death from shock caused by a blow.

No. 4 South City District (Grand Canal-street).—The deaths (19) are equivalent to an annual rate of 27·9 per 1,000. The deaths include 2 from whooping-cough, one from influenza, one from pneumonia (not defined), 2 from tuberculous phthisis, 5 from diseases of the respiratory system, and one death by burns.

New Kidmanham District.—The deaths (1) are equal to an annual rate of 23·2 per 1,000. Among the deaths are one from measles, and one from phthisis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 13·7; Pembroke, 20·1; Blackrock, 17·9; and Kingstown, 11·8. The deaths from the principal epidemic diseases tabulated for these districts include one death from measles for Pembroke, and one from whooping-cough for Kingstown. Among the 11 deaths from all causes for Rathmines and Rathgar are one each from lobar pneumonia and broncho-pneumonia, 2 deaths from diseases of the respiratory system, and one accidental death; the 11 deaths from all causes for Pembroke include one from influenza, one from pneumonia (not defined), and 3 deaths from bronchitis; of the 3 deaths from all causes for Blackrock there was one each from pneumonia (not defined) and bronchitis; and of the 5 deaths from all causes for Kingstown one was caused by phthisis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 1st May, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 1st May, 1909.

From this it appears that:—

Ten cases of measles were admitted into hospital during the week, 10 were discharged, and 36 cases remained under treatment at its close.

Fifteen cases of scarlet fever were admitted to hospital, 9 were discharged, there was one death, and 53* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Six cases of diphtheria were admitted to hospital, 7 were discharged, and 32 patients remained under treatment at the close of the week.

Five cases of enteric fever were admitted to hospital during the week, 7 were discharged, and 35 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 15 cases of pneumonia were admitted to hospital, 11 were discharged, there were 2 deaths, and 30 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 14.0) was equal to an average annual death-rate of 1.45 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 16.9 per 1,000, the rate for Glasgow being 18.1 and for Edinburgh 17.2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 1st May. From this Report it appears that of a total of 63 cases notified, 29 were scarlet fever, 21 phthisis, 9 diphtheria, 2 erysipelas, one enteric fever, and one puerperal fever. Among the 329 cases of infectious diseases in hospital at the close of the week were 137 cases of scarlet fever, 57 of whooping-cough, 41 of phthisis, 40 of diphtheria, 20 of measles, 12 of erysipelas, 4 of cerebro-spinal fever, 4 of puerperal fever, 2 of chicken-pox, one of enteric fever and one of small-pox.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 1st May, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 1st May, 1909:—

"Very unsettled, changeable, and showery weather prevailed during the greater part of this week. The general distribution of atmospheric pressure favoured such conditions. The barometer stood throughout at a high level both in Iceland and over and near the Azores in mid-Atlantic. In the intervening regions successive areas of relatively low pressure drifted in from the Ocean over the British Isles, passing thence either north-eastwards to Scandinavia or eastwards to Germany. In addition to frequent precipitation in the form of thunder and hail showers, temperature gave way materially and a serious relapse into winter took place after Monday. In Dublin the week opened with a cloudy morning after a very cool night. The day was fine in the City and even warm, the thermometer rising to 60° with a southerly wind—at 6 p.m. a solar halo was seen. A sharp thunderstorm was reported from Donegal. Monday was fine to showery—rain fell at night. Tuesday was chiefly fine, but cooler. Heavy hail-storms occurred on Wednesday, and the W. wind blew strongly and in squalls. A very cold night followed, which in turn was succeeded by a fine spell on Thursday, when however rain, hail and sleet fell generally over Scot and the South of England, thunder and lightning being reported from many districts. On Friday again showers of cold rain and sleet were common, but Saturday was in Ireland fine and bright although cold, an area of high barometer having spread in from the Atlantic. Snow and hail lodged on the higher ranges of the Dublin and Wicklow Mountains on and after Wednesday. In Dublin the mean height of the barometer was 29.857 inches, pressure varying from 29.540 inches at 9 p.m. of Monday (wind, calm) to 30.326 inches at 9 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 47.2°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 46.3°. The screened thermometers rose to 60.1° on Sunday and fell to 35.1° on Saturday. N.W. winds prevailed. The rainfall was .477 inch on 6 days, .194 inch being recorded on Wednesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.696 inches. The highest reading (30.167) was on Saturday at 9 p.m., wind N., and the lowest (29.374) on Monday at 9 a.m., wind S.S.E.

The mean temperature for the week was 45.6°, being 1.4° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 59.1°, and was lowest on Saturday, the mercury having fallen to 33.0°. The mean of the Dry Bulb for the week was 44.9° and of the Wet Bulb 42.3°. The mean humidity of the air was .82, complete saturation being represented by 1.0. The rainfall during the week measured 0.485 in.

At Greenwich the mean temperature for the week was 48.6°, the maximum 68.1°, and the minimum 35.1°; at Glasgow the maximum was 59.0°, the minimum 33.5°, and the mean 46.0°; and at Edinburgh the maximum was 56.5°, the minimum 30.9°, and the mean 43.3°. The rainfall at Greenwich measured 0.77 in.; at Glasgow, 1.17 ins.; and at Edinburgh 1.09 ins.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

Dublin, 10th May, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 18·3 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in sixteen of the districts to 9·6 for Ballymena, the 4 deaths from all causes for that district including 2 from measles. Among the 136 deaths from all causes for Belfast are 4 from whooping-cough; the 28 deaths from all causes for Cork include one from scarlet fever, from whooping-cough, and one from diphtheria; and of the 8 deaths from all causes for Kilkenny there was one death from scarlet fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 301—56 boys and 145 girls—and the deaths to 153—73 males and 80 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 20·0 in every 1,000 of the population; omitting the deaths (numbering 9) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-13 of Table II.

from localities outside the Area, the rate was 18·8 per 1,000. During the eighteen weeks ending with Saturday last, the death-rate averaged 26·4, and was 1·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the deaths registered there were 2 from measles, 4 from whooping-cough, 2 from diarrhoeal diseases, and 3 from influenza. In each of the 3 preceding weeks, deaths from measles were 6, 3, and 2; deaths from whooping-cough, were 11, 6, and 13; deaths from diarrhoeal diseases were 2, one, and 0; and deaths from influenza were 4, 9, and 3.

Of 18 deaths from pneumonia (all forms) 2 were from lobar pneumonia, 9 were from broncho-pneumonia, and 7 were returned as from *pneumonia* (not defined).

The deaths from all forms of tuberculous disease amounted to 29, having been 43, 29, and 33 in each of the 3 preceding weeks; the 29 deaths for last week include 23 from tuberculous phthisis (*phthisis*), 3 from tuberculous meningitis, and 3 deaths from other forms of the disease.

There were 3 deaths from carcinoma, and 5 deaths from cancer (undefined).

The deaths of 6 infants, prematurely born, were registered.

Diseases of the brain and nervous system caused 9 deaths, including the death of one infant under one year of age from *convulsions*.

Twenty-one deaths were from diseases of the heart or blood vessels, and 13 deaths were attributed to bronchitis.

Of 4 deaths from accidental causes, 2 were by burns (one being that of an infant under one year of age), one was the death of a child aged 16 months caused by a fall from a window, and one was due to neglect at birth.

In 3 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; all were deaths of infants under one year old.

Fifty-two of the persons whose deaths were registered during the week were under 5 years of age (27 being infants under one year, of whom 16 were under one month old) and 34 were aged 60 years and upwards, including 16 persons aged 70 and upwards, of whom 5 were octogenarians, and one (a woman) was stated to have been aged 90 years.

Fifty-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 6 took place in the North Dublin Union Workhouse and 17 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 18·8 per 1,000; the rate in the City was 20·1 (North City Districts, 22·6; South, 18·5), and in the Suburbs, 13·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·0 per 1,000 inhabitants, the rate for the City being 1·2 (1·7 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (12) are equal to an annual rate of 21·2 per 1,000 and include one death from whooping-cough, one death from epidemic enteritis, 2 deaths from broncho-pneumonia and 2 deaths from tuberculous phthisis (*phthisis*).

No. 1 North City District, West (Summer-hill).—The deaths (27) are equal to an annual rate of 35·6 per 1,000. Measles and epidemic enteritis each caused one death, there were 3 deaths from broncho-pneumonia, 2 deaths from *pneumonia* (not defined), 4 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (10) are equivalent to an annual rate of 17·1 per 1,000. Of the deaths, one was from lobar-pneumonia, and one was from tuberculous phthisis.

No. 3 North City District (Benburb-street).—The deaths (12) represent an annual rate of 18·9 per 1,000. The death included one from whooping-cough, one from *pneumonia* (not defined), 6 from tuberculous disease, and one death from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumecondra, part of, 18·1 per 1,000 inhabitants: Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 20·6. Of the 4 deaths from all causes for Coolock and Drumecondra, part of, one was from influenza and one from *pneumonia* (not defined); and the 3 deaths from all causes for Finglas and Glasnevin, part of, include one from lobar pneumonia.

No. 1 South City District (South Earl-street).—The deaths (11) represent an annual rate of 14·0 per 1,000, and include one death from whooping-cough, one death from tuberculous phthisis, 2 deaths from bronchitis, and 2 accidental deaths.

No. 2 South City District (Castle-street).—The deaths (10) are equal to an annual rate of 24·2 per 1,000. Among the deaths there was one from each of measles, influenza, *pneumonia* (not defined), and tuberculous meningitis, and there were 2 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (18) are equal to an annual rate of 22·0 per 1,000. There were 2 deaths from broncho-pneumonia, one death from *pneumonia* (not defined), 6 deaths from tuberculous phthisis (*phthisis*), and 5 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (13) are equivalent to an annual rate of 19·1 per 1,000. Broncho-pneumonia and *pneumonia* (not defined) each caused one death, and there were 3 deaths from tuberculous disease.

New Kilmainham District.—There was one death recorded, representing an annual rate of 5·8 per 1,000. Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 12·8; Pembroke, 11·0; Blackrock, 11·9; and Kingstown, 17·8. The only death from any of the principal epidemic diseases tabulated for these districts was one from whooping-cough for Pembroke. Among the 9 deaths from all causes for Rathmines and Rathgar are one from influenza, one from broncho-pneumonia, and 3 from tuberculous disease; and the 6 deaths from all causes for Kingstown include one from bronchitis and one caused by neglect at birth.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV, should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 8th May, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 8th May, 1909.

From this it appears that:—

Five cases of measles were admitted into hospital during the week, 10 were discharged, and 31 cases remained under treatment at its close.

Seventeen cases of scarlet fever were admitted to hospital, 5 were discharged, there was one death, and 64* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Seven cases of diphtheria were admitted to hospital, 6 were discharged, and 33 patients remained under treatment at the close of the week.

Five cases of enteric fever were admitted to hospital during the week, 2 were discharged, there were 2 deaths, and 36 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 14 cases of pneumonia were admitted to hospital, 12 were discharged, there was one death, and 31 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 14.1) was equal to an average annual death-rate of 14.1 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 16.2 per 1,000, the rate for Glasgow being 16.3 and for Edinburgh 16.3

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 8th May. From this Report it appears that of a total of 42 cases notified, 17 were phthisis, 12 scarlet fever, 8 diphtheria, 3 erysipelas, one enteric fever, and one cerebro-spinal fever. Among the 322 cases of infectious diseases in hospital at the close of the week were 132 cases of scarlet fever, 56 of whooping-cough, 45 of phthisis, 41 of diphtheria, 17 of measles, 11 of erysipelas, 5 of cerebro-spinal fever, 4 of puerperal fever, and one of enteric fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 8th May, 1903, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the **TEMPERATURE and RAINFALL** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1901.
(b) Formerly described as "Simple Continued Fever."
(c) Exclusive of Pneumonia.
(d) Exclusive of 9 deaths of persons (including one under 1 year old), admitted to hospital from localities outside the Area.
(e) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portladow, those at Markree for Sligo, and those at Roche's Point for Cork and Queenstown.
(f) Observations at Ordnance Survey Office, Phoenix Park.
(g) Observations by Sir John Moore taken at Fitzwilliam-square.
(h) Observations by Mr. F. W. Moore, taken at Botanic Gardens, Glasnevin.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 8th May, 1903, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

* Exclusive of 12 patients in "Beneavin," the Convalescent Home of Cork-street Fever Hospital.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.METSOC., reports as follows on the weather during the week ended 8th May, 1909:—

"The story of the weather of this week is soon told. Throughout the period an anticyclone held sway over North-western Europe, and the result was a persistence of cool, dry easterly winds, a remarkable deficiency of cloud, and an exceptionally high percentage of bright sunshine. Only on Monday morning, when a shallow Atlantic depression passed northwards outside the western shores of Ireland and Scotland, did clouds and rain prevail for a while over the greater part of those parts of the United Kingdom. In England and Wales there was no precipitation. On Sunday the anticyclone was central in Brittany. Thence its central space moved to the Netherlands and Germany in the first instance (on Monday), later to Denmark (on Tuesday), and finally to Scandinavia (on Wednesday). At 7 a.m. of this last-named day the barometer stood at 30.7 inches or slightly more over the inland districts of Scandinavia, and 24 hours later the isobar of 30.7 inches embraced nearly the whole of that peninsula—Bodö in Norway and Karlstad in Sweden both reporting 30.75 inches at 7 a.m. of Thursday. Early on Saturday a low-pressure system formed over Scandinavia. Owing to the absence of cloud the diurnal range of temperature at inland stations in the British Isles became very large—at Nairn, in the N.E. of Scotland, the thermometer fell from a maximum of 72° on Wednesday to 32° during the succeeding night—a sky of 40° within a few hours. During the first three days of the week much cirrus cloud travelled across the range from S.W. in Ireland, a lunar halo appearing on Sunday night, but from Tuesday scarcely any cloud was to be seen. In Dublin the mean height of the barometer was 30.210 inches, pressure ranging between 30.354 inches at 9 a.m. of Sunday (wind, calm) and 30.115 inches at 9 p.m. of Saturday (wind, N.E.). The corrected mean temperature was 51.3°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 51.4°. The screened thermometers fell to 33.1° on Sunday and rose to 62.2° on Wednesday. S.E. and E. winds held throughout. The rainfall was .038 inch referred to Sunday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.037 inches. The highest reading (30.185) was on Sunday at 9 a.m., air calm, and the lowest (29.953) on Saturday at 9 p.m., air calm.

The mean temperature for the week was 50.4°, being 4.0° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Thursday and Friday, on which days the thermometer registered 62.3°, and was lowest on Sunday, the mercury having fallen to 26.7°. The mean of the Dry Bulb for the week was 50.9° and of the Wet Bulb 46.4°. The mean humidity of the air was .72, complete saturation being represented by 1.0. The rainfall during the week measured 0.012 inch.

At Greenwich the mean temperature for the week was 50.6°, the maximum 64.0°, and the minimum 34.5°; at Glasgow the maximum was 74.0°, the minimum 31.0°, and the mean 51.6°; and at Edinburgh the maximum was 67.6°, the minimum 32.0°, and the mean 49.1°. There was no rainfall recorded at Greenwich, Glasgow, or Edinburgh.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 15TH MAY, 1909.

[No. 19.]

*General Register Office, Charlemont House,
Dublin, 17th May, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 18·7 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 18·7 | 9·3 | 14·0 | 18·7 | 15·2 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in fourteen of the districts to 6·9 in Armagh, the 2 deaths from all causes for that district including one from whooping-cough. Among the 145 deaths from all causes for Belfast are one from measles, 5 from whooping-cough, one from diarrhœa, and 2 from cerebro-spinal fever. Of the 28 deaths from all causes for Cork, 4 are from whooping-cough, and one from enteric fever. Among the 10 deaths from all causes for Limerick is one death from scarlet fever. Included in the 14 deaths from all causes for Waterford is one from whooping-cough. Of the 3 deaths from all causes for Newry, one is from enteric fever, and one death from diphtheria is included in the 6 deaths from all causes for Sligo.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 231—116 boys and 115 girls—and the deaths to 153—64 males and 89 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 20·0 in every 1,000 of the

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

population ; omitting the deaths (numbering 12) of persons admitted into public institutions from localities outside the Area, the rate was 18·5 per 1,000. During the nineteen weeks ending with Saturday last, the death-rate averaged 26·1, and was 1·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the total deaths registered there were 3 from measles, 5 from whooping-cough, 2 from enteric fever, one death from epidemic enteritis, and 4 deaths from influenza ; deaths from these diseases in the 3 preceding weeks were—from measles, 3, 2, and 2 ; from whooping-cough, 6, 13, and 4 ; from enteric fever, one, 0, and 0 ; from diarrhoeal diseases, one, 0, and 2 and from influenza, 9, 3, and 3 deaths, respectively.

Deaths from pneumonia (all forms) included one death from lobar pneumonia, 5 deaths from broncho-pneumonia, and 7 deaths from *pneumonia* (not defined).

All forms of tuberculous disease which in each of the 3 preceding weeks caused the deaths of 29, 33, and 29 persons, in the week under notice caused 21 deaths ; this latter figure includes 17 deaths from tuberculous phthisis (*phthisis*), one death from tuberculous meningitis, one death from *tuberculous mesenterica*, and 2 deaths from other forms of the disease.

There were 4 deaths from carcinoma, and 3 deaths from cancer (undefined).

Prematurity caused the deaths of 5 infants.

Among the deaths from diseases of the brain and nervous system were 3 deaths from *convulsions*, 2 of these being of children over one year, but under 5 years of age.

Diseases of the heart and blood vessels accounted for 33 deaths, and there were 16 deaths from bronchitis.

Of 2 accidental deaths, one was attributed to drowning, and one death by suicide was registered.

In 4 instances the cause of death was "uncertified," there having been no medical attendant during the last illness ; these cases include the deaths of 3 children under 5 years of age (including 2 infants under one year old) and the death of one person aged 74 years.

Thirty-eight of the persons whose deaths were registered during the week were under 5 years of age (21 being infants under one year, of whom 7 were under one month old) and 54 were aged 60 years and upwards, including 31 persons aged 70 and upwards, of whom 5 were octogenarians, and 4 (2 males and 2 females) were stated to have been aged 96, 90, 92, and 90 years, respectively.

Sixty-five of the deaths registered during the week occurred in hospitals and other public institutions ; of this number 11 took place in the North Dublin Union Workhouse, 17 in the South Dublin Union Workhouse, and one in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week :—Deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 18·5 per 1,000 ; the rate in the City was 20·2 (North City Districts, 21·6 ; South, 18·8), and in the Suburbs, 12·5.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·4 per 1,000 inhabitants, the rate for the City being 1·7 (2·7 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (16) are equal to an annual rate of 28·2 per 1,000. Whooping-cough caused 3 deaths, there was one death from epidemic enteritis, there were 4 deaths from tuberculous phthisis (*phthisis*), and one death from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (14) are equal to an annual rate of 18·5 per 1,000, and include one death from measles, one death from lobar-pneumonia, one death from *phthisis*, and 2 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (10) are equivalent to an annual rate of 17·1 per 1,000. There was one death from measles, also one death from broncho-pneumonia, there were 2 deaths from tuberculous disease, and one death from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (13) represent an annual rate of 20·4 per 1,000. The deaths include 2 from influenza and 3 from tuberculous disease.

Other North City Districts. The annual death-rates represented by the deaths recorded last week are :—Clontarf and Howth, No. 1, part of, 39·2 per 1,000 inhabitants ; Coolock and Drumcondra, part of, 22·7 ; and Finglas and Glasnevin, part of, 20·6. Of the 4 deaths from all causes for Clontarf and Howth, No. 1, part of, there was one death each from enteric fever and tuberculous meningitis ; the 5 deaths from all causes for Coolock and Drumcondra, part of, included one each from influenza and broncho-pneumonia ; and among the 3 deaths from all causes for Finglas and Glasnevin, part of, there was one death from enteric fever.

No. 1 South City District (South Earl-street).—The deaths (15) represent an annual rate of 19·1 per 1,000. Among the deaths, there was one from whooping-cough, there were 2 deaths from *pneumonia* (not defined), 2 from tuberculous phthisis, and 4 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (3) are equal to an annual rate of 7·3 per 1,000. Of the 3 deaths registered one was from bronchitis.

No. 3 South City District (Peter-street).—The deaths (12) are equal to an annual rate of 14·6 per 1,000. Tuberculous phthisis caused 2 deaths, and there were 2 deaths from diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (21) are equivalent to an annual rate of 30·9 per 1,000, and include one death from whooping-cough, 3 deaths from *pneumonia* (not defined), one death from tuberculous disease, and 4 deaths from bronchitis.

New Kilmmanham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. Two of the deaths registered were caused by broncho-pneumonia.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are :—Rathmines and Rathgar, 12·8 ; Pembroke, 12·8 ; Blackrock, 17·9 ; and Kingstown, 8·9. The only death from any of the principal epidemic diseases tabulated for these districts was one from measles for Rathmines and Rathgar. The 9 deaths from all causes for Rathmines and Rathgar include one death each from influenza, broncho-pneumonia, *phthisis*, and bronchitis ; of the 7 deaths from all causes for Pembroke one was from bronchitis ; and the 3 deaths from all causes for Kingstown include one death from *pneumonia* (not defined), one from *phthisis*, and one death caused by an accidental fall.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 15th May, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including 2 cases of cerebro-spinal fever reported during week ended 15th May.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 15th May, 1909.

From this it appears that:—

Eight cases of measles were admitted into hospital during the week, 9 were discharged, and 30 cases remained under treatment at its close.

Nineteen cases of scarlet fever were admitted to hospital, 6 were discharged, and 77* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Five cases of diphtheria were admitted to hospital, 8 were discharged, and 30 patients remained under treatment at the close of the week.

Seven cases of enteric fever were admitted to hospital during the week, 4 were discharged, there was one death, and 38 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 22 cases of pneumonia were admitted to hospital 13 were discharged, there were 4 deaths, and 36 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 13·1) was equal to an average annual death-rate of 13·7 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 14·9 per 1,000, the rate for Glasgow being 15·2 and for Edinburgh 14·2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 15th May. From this Report it appears that of a total of 56 cases notified, 22 were scarlet fever, 21 phthisis, 7 diphtheria, 4 erysipelas, one enteric fever, and one cerebro-spinal fever. Among the 318 cases of infectious diseases in hospital at the close of the week were 124 cases of scarlet fever, 61 of whooping-cough, 47 of phthisis, 41 of diphtheria, 15 of measles, 10 of erysipelas, 6 of cerebro-spinal fever, 3 of enteric fever, 2 of puerperal fever, and one of chicken-pox.

* See note (*) at foot of Table XII.

TABLE III.--DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 15th May, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 15th May, 1909:—

"At the beginning of the week the British Isles were under the influence of an anticyclone, which earlier in the month had taken up its position over Scandinavia, thence moving westwards to Iceland. As baric gradients were slight, and the sky remarkably free from cloud in Ireland, the diurnal range of temperature was very large in this country—at Birr Castle the thermometer fell from a maximum of 71° on Sunday to 36° during the succeeding night; at Valentia the range was nearly as great—from 71° to 41°. Along the east coast of Great Britain the thermometer failed to reach 50° at several stations—in London the maximum on Sunday was 59°. On Tuesday morning a shallow depression was in course of formation over the Irish Sea. The westerly wind of this system and brilliant sunshine sent the thermometer up to 68°3' in Dublin, 70° at Bath and in London, 72° at Nottingham and Oxford, and 73° at Birmingham. This foretaste of summer was short-lived, for as Tuesday's depression travelled northwards to the Shetlands and then westwards to Norway, it drew down an increasingly strong polar aircurrent over the United Kingdom. Clouds took the place of sunshine, cold showers of hail, and in places sleet or snow, fell at intervals, and night frosts set in. On Friday night the screened thermometer fell to 29° at Birr Castle, 30° at Nairn and Shields, 31° at Wick, 32° at Leith, Bath and Stornoway, 33° at Aberdeen, and 34° at Oxford and in Dublin. Ground frosts were very severe at Oxford the grass minimum was 25°. Saturday was fine, but a very keen air continued all over these islands. In Dublin a fine display of aurora borealis was observed coming up to midnight of Friday. The planet Mercury was seen in the N.W. after sunset to great advantage on several evenings during the week. The mean height of the barometer was 30.187 inches, pressure ranging between 30.088 inches at 9 p.m. of Monday (wind, N.W.) and 30.355 inches at 9 a.m. of Thursday (wind, N.N.W.). The corrected mean temperature was 48.1°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 49.5°. On Tuesday the screened thermometers rose to 68.3°, on Saturday they fell to 33.9°. The prevailing wind was N.N.W. Rain fell to the amount of .076 inch, .043 inch being recorded on Wednesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30·017 inches. The highest reading (30·180) was on Thursday at 9 a.m., wind N., and the lowest (29·923) on Sunday and Monday at 9 p.m., air calm.

The mean temperature for the week was 45·8°, being 2·7° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Tuesday, on which day the thermometer registered 67·8°, and was lowest on Saturday, the mercury having fallen to 28·2°. The mean of the Dry Bulb for the week was 47·1° and of the Wet Bulb 45·3°. The mean humidity of the air was ·88, complete saturation being represented by 1·0. The rainfall during the week measured 0·027 inch.

At Greenwich the mean temperature for the week was 48·5°, the maximum 73·9°, and the minimum 33·8°; at Glasgow the maximum was 63·9°, the minimum 30·8°, and the mean 47·7°; and at Edinburgh the maximum was 59·4°, the minimum 29·3°, and the mean 45·1°. The rainfall at Greenwich measured 0·11 in.; at Glasgow, 0·21 in.; and at Edinburgh, 0·21 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155·3 feet.)

VOL. XLVI.]

WEEK ENDING SATURDAY, 22ND MAY, 1909.

[No. 20.]

*General Register Office, Charlemont House,
Dublin, 24th May, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 22·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·6 per 1,000, the rates varying from 0·0 in thirteen of the districts to 13·7 in Armagh, the 5 deaths from all causes for that district including 2 from whooping-cough. Of the 180 deaths from all causes for Belfast there are 9 deaths from whooping-cough, one from diphtheria, 2 from diarrheal diseases, and one from cerebro-spinal fever; the 40 from all causes for Cork include one from typhus and 4 from whooping-cough; of the 14 deaths from all causes for Waterford one is from whooping-cough; among the 7 deaths from all causes for Wexford 2 are from diarrheal diseases; and of the 4 deaths from all causes for Ballymena there is one death from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 248—117 boys and 131 girls—and the deaths to 176—92 males and 84 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 23·0 in every 1,000 of the

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

population; omitting the deaths (numbering 6) of persons admitted into public institutions from localities outside the Area, the rate was 22·3 per 1,000. During the twenty weeks ending with Saturday last, the death-rate averaged 25·9, and was 1·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths from all causes include 4 deaths from whooping-cough, one death from diphtheria, 4 deaths from enteric fever, and 5 deaths from influenza; in each of the 3 preceding weeks, deaths from whooping-cough were 13, 4, and 5; deaths from diphtheria were 0, 0, and 0; deaths from enteric fever were 0, 0, and 2; and deaths from influenza were 3, 3, and 4.

There were 2 deaths from lobar pneumonia, 5 from broncho-pneumonia, and 9 from pneumonia (not defined).

Of 28 deaths from all forms of tuberculous disease, 17 were from tuberculous phthisis (*phthisis*), 3 were from tuberculous meningitis, and 8 were from other forms of the disease; in each of the 3 preceding weeks tuberculous diseases caused 33, 29, and 21 deaths.

There were 2 deaths from carcinoma, and 4 from cancer, malignant disease (undefined).

The deaths of 4 infants were attributed to prematurity.

Diseases of the brain and nervous system caused the deaths of 15 persons, including those of 2 infants under one year of age, and one aged 15 months from *convulsions*.

There were 26 deaths from diseases of the heart and blood vessels, and 21 deaths from bronchitis.

Four deaths were attributed to accident or negligence, and one death by suicide occurred.

In 3 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases were all of infants under one year of age.

Forty-nine of the persons whose deaths were registered during the week were under 5 years of age (34 being infants under one year, of whom 15 were under one month old) and 52 were aged 60 years and upwards, including 22 persons aged 70 and upwards, of whom 5 were octogenarians, and 2 (females) were stated to have been aged 90 and 93 years, respectively.

Seventy-one of the deaths registered during the week occurred in hospitals and other public institutions; of this number 9 took place in the North Dublin Union Workhouse and 22 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 22·3 per 1,000; the rate in the City was 22·6 (North City Districts, 13·3; South, 27·2) and in the Suburbs, 21·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·2 per 1,000 inhabitants, the rate for the City being 1·4 (1·3 in the North City Districts, and 1·4 in the South), and for the Suburbs, 0·6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (15) are equal to an annual rate of 26·4 per 1,000. There were 2 deaths from whooping-cough, one death from pneumonia (not defined), two deaths from bronchitis, and one accidental death.

No. 1 North City District, West (Summer-hill).—The deaths (9) are equal to an annual rate of 11·9 per 1,000, and include one death from enteric fever, one death from pneumonia (not defined), and 2 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (13) are equivalent to an annual rate of 22·3 per 1,000. Among the deaths were 2 from phthisis, one from enteric fever, and one each from broncho-pneumonia and pneumonia (not defined), and 2 from diseases of the respiratory system.

No. 3 North City District (Benburb-street).—The deaths (10) represent an annual rate of 15·7 per 1,000. The deaths include 2 from pneumonia (not defined), 2 from tuberculous disease and 2 from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumecondra, part of, 27·2 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 13·7. Of the 6 deaths from all causes for Coolock and Drumecondra, part of, one is from pneumonia (not defined), and one from phthisis.

No. 1 South City District (South Earl-street).—The deaths (25) represent an annual rate of 31·8 per 1,000. The deaths included one from whooping-cough, one from influenza, one from each of broncho-pneumonia and pneumonia (not defined), 5 from tuberculous disease, 5 from diseases of the respiratory system, and 2 accidental deaths.

No. 2 South City District (Castle-street).—The deaths (14) are equal to an annual rate of 33·9 per 1,000. There was one death from whooping-cough, also one death from each of broncho-pneumonia and pneumonia (not defined); tuberculous disease caused 4 deaths, and bronchitis 2 deaths.

No. 3 South City District (Peter-street).—The deaths (25) are equal to an annual rate of 30·5 per 1,000. Diphtheria caused one death, there was one death from influenza, also one death from lobar-pneumonia, there were 7 deaths from tuberculous disease, 4 deaths from bronchitis, and one accidental death.

No. 4 South City District (Grand Canal-street).—The deaths (9) are equivalent to an annual rate of 13·2 per 1,000 and include one death from enteric fever, one death from bronchitis, and one suicide.

New Kilmainham District.—The deaths (5) are equal to an annual rate of 29·0 per 1,000. Of the deaths one was from tuberculous meningitis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 18·5; Pembroke, 20·1; Blackrock, 35·7; and Kingstown, 20·7. The only death from any of the principal epidemic diseases tabulated for these districts is one from enteric fever for Rathmines and Rathgar. The 13 deaths from all causes for Rathmines and Rathgar include two from influenza, one from lobar pneumonia, one from broncho-pneumonia, and 2 from tuberculous phthisis (*phthisis*); of the 11 deaths from all causes for Pembroke one is from broncho-pneumonia, 2 are from tuberculous disease, and 4 from diseases of the respiratory system. Among the 6 deaths from all causes for Blackrock are one from tuberculous phthisis, and one from bronchitis. Among the 6 deaths from all causes for Kingstown one is from influenza and one from pneumonia (not defined).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 22nd May, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including 2 cases of cerebro-spinal fever reported during week ended 15th May.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 22nd May, 1909.

From this it appears that:—

Eight cases of measles were admitted into hospital during the week, 7 were discharged, there was one death, and 30 cases remained under treatment at its close.

Eleven cases of scarlet fever were admitted to hospital, 10 were discharged, and 78* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Eleven cases of diphtheria were admitted to hospital, 5 were discharged, there were 3 deaths, and 33 patients remained under treatment at the close of the week.

Ten cases of enteric fever were admitted to hospital during the week, 7 were discharged, there was one death, and 40 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 13 cases of pneumonia were admitted to hospital, 8 were discharged, there were 2 deaths, and 39 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 14.0) was equal to an average annual death-rate of 14.7 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 17.5 per 1,000, the rate for Glasgow being 17.1 and for Edinburgh 17.2

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 22nd May. From this Report it appears that of a total of 36 cases notified, 17 were scarlet fever, 9 phthisis, 8 diphtheria, 1 erysipelas, and one cerebro-spinal fever. Among the 322 cases of infectious diseases in hospital at the close of the week were 129 cases of scarlet fever, 61 of whooping-cough, 49 of phthisis, 39 of diphtheria, 20 of measles, 8 of erysipelas, 6 of chicken-pox, 4 of cerebro-spinal fever, one of enteric fever, and one of puerperal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 22nd May, 1969, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909.

(b) Formerly described as "Simple Continued Fever."

(c) Exclusive of Pneumonia.

(d) Exclusive of 6 deaths of persons (including 2 at 60 years or upwards), admitted to Hospital from localities outside the Area.

(e) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newrytownards, those at Armagh for Lisburn, Lurgan, Newry, and Portladow, those at Markree for Sligo, and those at Roche's Point for Cork and

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 22nd May, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*
